SMARTFORCE PORTFOLIO

SmartForce Planning Management

AIRBUS

SmartForce Planning Management

SmartForce Planning Management is an integrated IT solution to support in a centralised and synchronised way the maintenance and operational activities.

Missions and aircraft operations are becoming increasingly complex and demanding. SmartForce Planning Management integrates state-of-the-art solutions:

FLEET PLANNING

Ensure the best possible aircraft assigned to a specific mission

CREW PLANNING

Manage in an optimum way the different crews when planning a mission

MAINTENANCE INFORMATION SYSTEM

Efficiently schedule and manage aircraft maintenance & support airworthiness compliance

This centralisation allows for unprecedented flexibility in making short-term changes, which can be immediately realised in all systems.

FEATURES

- **Intuitive interface** applicable to any type of platform or fleet, allowing for end-to-end planning
- Improved aircraft maintenance management by a **comprehensive maintenance planning**
- **Faster and more reliable processes for fleet and crew support**, facilitating team alignment and continuous coordination

Depending on specific requirements or needs from our customers, optional features are available.

BENEFITS

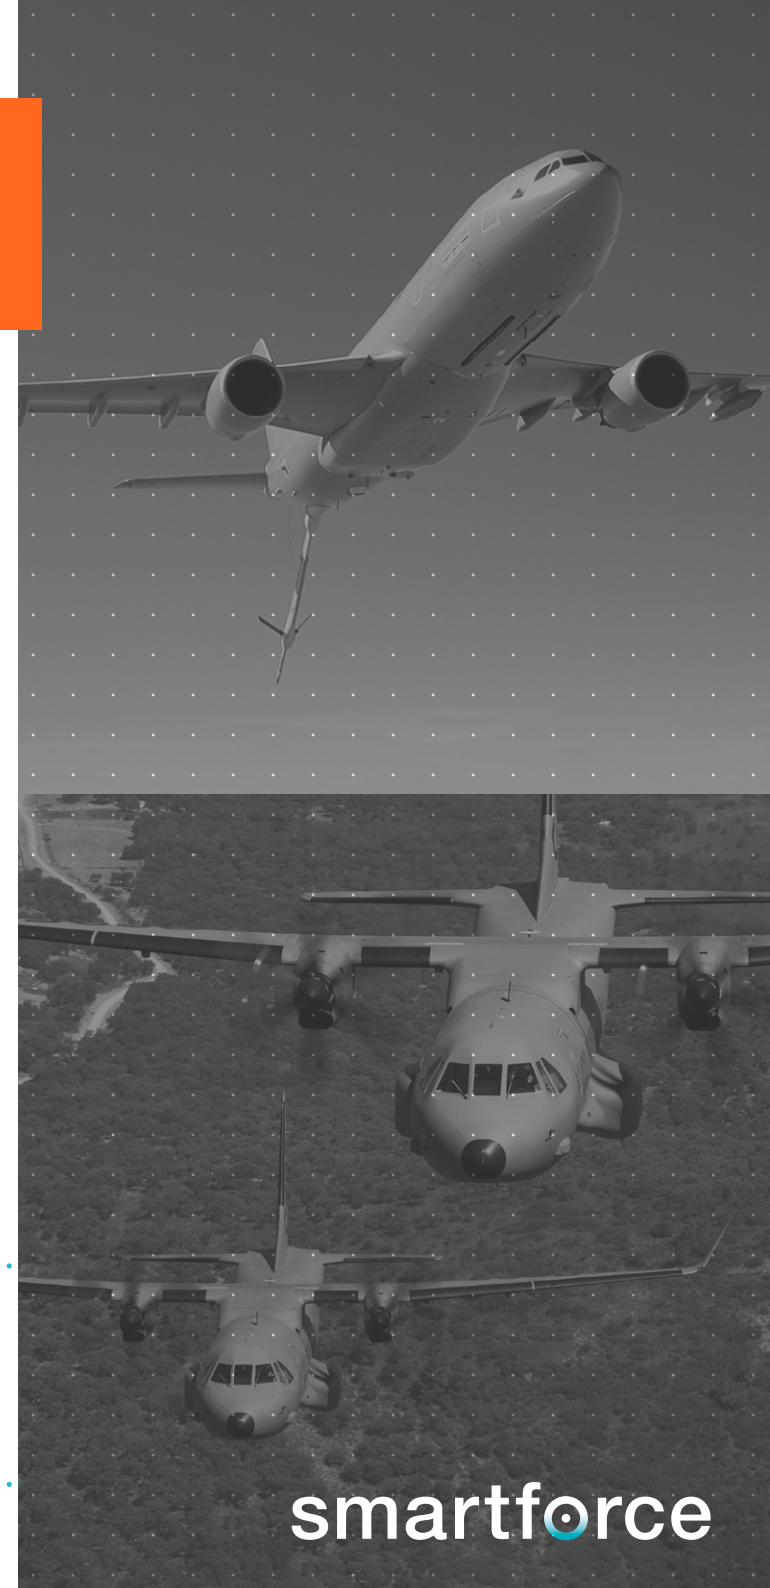

- Improved end-to-end fleet management for aircraft maintenance
- Ensured regulatory compliance
- Increased asset reliability and availability
- Faster and more reliable maintenance and operations
- Save resources for higher-value activities

TODAY

The combination of disconnected tools and teams, coordination issues, loss of information between teams and non-digitalised data is having a significant impact on the fleet availability.

TOMORROW

Centralised information and an easy-to-use interface enable decision-makers to optimise fleet availability.
