SmartForce Fleet Planning

AIRBUS

SmartForce Fleet Planning

SmartForce Fleet Planning is a flexible multi-platform service providing real-time visibility on the status of your fleet. It enables the flexibility to schedule your fleets in accordance to their mission and configurations in only a short period of time.

Missions as well as aircraft operations are becoming increasingly complex. SmartForce Fleet Planning facilitates the decision making process by providing optimised planning scenarios. These scenarios are based on the operational status of your fleet, taking into account airworthiness limitations, scheduled maintenance tasks and the respective configuration of the aircraft.

SmartForce Fleet Planning provides an easy-to-use interface which enables quick and last-minute changes thanks to both high-level fleet and detailed aircraft views as well as an overview on other resource availabilities (such as hangars).

FEATURES

- Centralised source for fleet planning
- Easy-to-use interface which facilitates the scheduling of your fleet, by taking maintenance, airworthiness and aircraft capabilities into account
- Proposing a list of aircraft best suited for the mission in accordance to the respective mission requirements
- Possibility to be connected to and offered together with a Maintenance Information System (MIS) (Optional)

BENEFITS

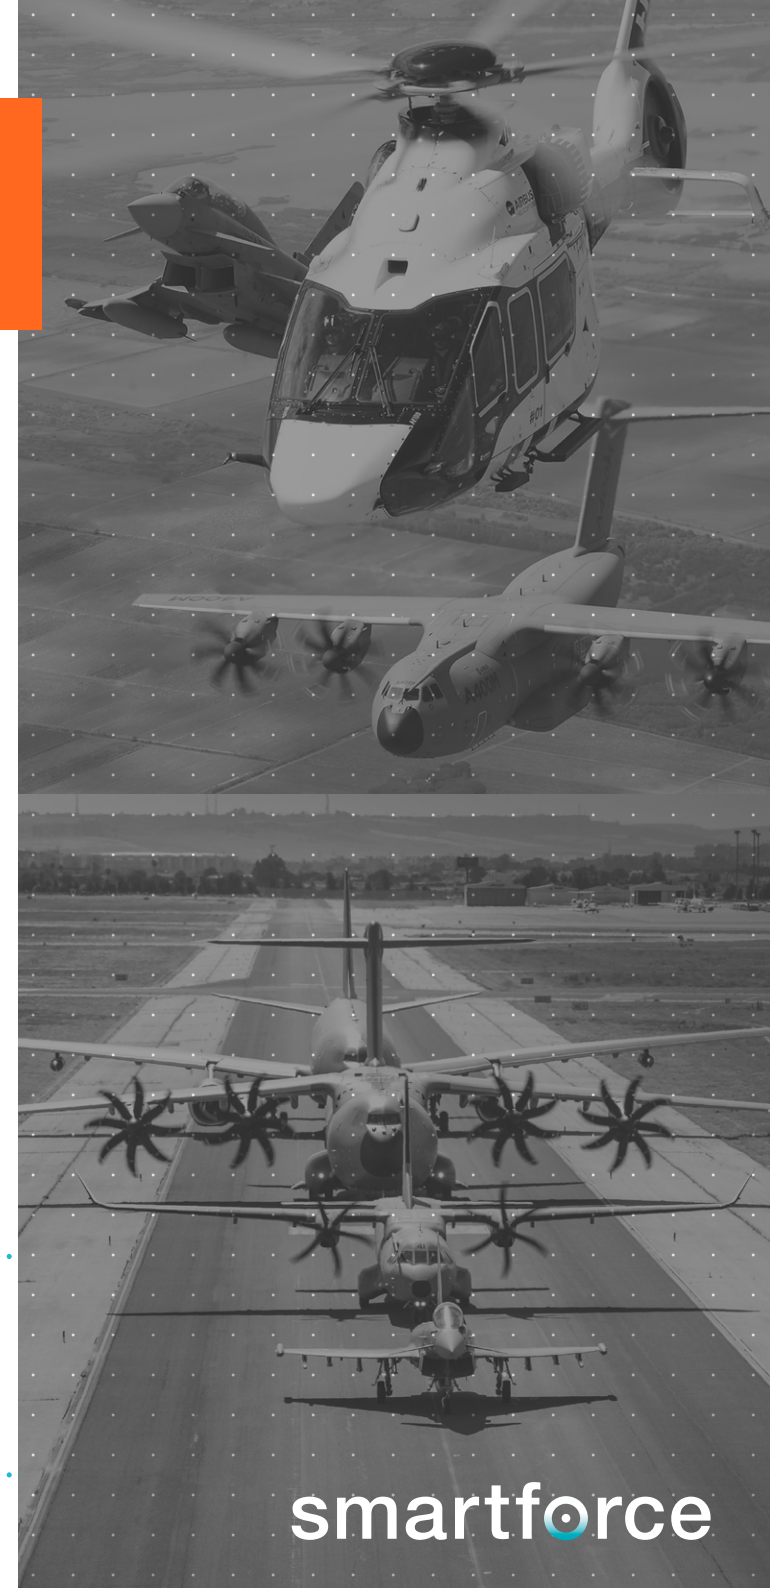

- Optimised fleet utilisation
- Fleet scheduling based on simultaneous inputs regarding airworthiness, maintenance and aircraft limitations
- Improved and centralised decision making amongst all stakeholders

TODAY

Disconnected tools and scattered ad-hoc information make it challenging to adapt to last-minute changes, which is having an impact on your fleet availability.

TOMORROW

Centralised information and an easy-to-use interface enables decision makers to choose the right aircraft for the right mission, just at the right time.
