European Aeronautic Defence and Space Company EADS N.V. (the “**Company**” or “**EADS**” and together with its subsidiaries, the “**Group**”) is a Dutch company, which is listed in France, Germany and Spain. The applicable regulations with respect to public information and protection of investors, as well as the commitments made by the Company to securities and market authorities, are described in this registration document (the “**Registration Document**”).

In addition to historical information, this Registration Document includes forward-looking statements. The forward-looking statements are generally identified by the use of forward-looking words, such as “anticipate”, “believe”, “estimate”, “expect”, “intend”, “plan”, “project”, “predict”, “will”, “should”, “may” or other variations of such terms, or by discussion of strategy. These statements relate to EADS’ future prospects, developments and business strategies and are based on analyses or forecasts of future results and estimates of amounts not yet determinable. These forward-looking statements represent the view of EADS only as of the dates they are made, and EADS disclaims any obligation to update forward-looking statements, except as may be otherwise required by law. The forward-looking statements in this Registration Document involve known and unknown risks, uncertainties and other factors that could cause EADS’ actual future results, performance and achievements to differ materially from those forecasted or suggested herein. These include changes in general economic and business conditions, as well as the factors described in “Risk Factors” below.

This Registration Document was prepared in accordance with Annex 1 of EC Regulation 809/2004, filed in English with, and approved by, the *Autoriteit Financiële Markten* (the “AFM”) on 21 April 2010 in its capacity as competent authority under the *Wet op het financieel toezicht* (as amended) pursuant to Directive 2003/71/EC. This Registration Document may be used in support of a financial transaction as a document forming part of a prospectus in accordance with Directive 2003/71/EC only if it is supplemented by a securities note and a summary approved by the AFM.

Risk Factors

1.	Financial Market Risks	8
2.	Business-Related Risks	11
3.	Legal Risks	17
4.	Industrial and Environmental Risks	18

EADS is subject to many risks and uncertainties that may affect its financial performance. The business, financial condition or results of operations of EADS could be materially adversely affected by the risks described below. These are not the only risks EADS faces. Additional risks and uncertainties not presently known to EADS or that it currently deems immaterial may also impair its business and operations.

1. Financial Market Risks

Impact of Recent Financial Crisis

During the second half of 2009, the global economy started a fragile recovery at a slow pace following massive liquidity injections by central banks and substantial support packages provided by governments worldwide. Although the risk of a further downward spiral of the financial sector appears to have been halted, the potential effects of future changes to the regulatory environment and the reduced availability of credit for investments cannot yet be quantified. Government interventions to mitigate the impacts from the economic downturn have also resulted in a significant deterioration of the fiscal position and increased public debt levels of the main industrialised countries. Accordingly, the tenuous economic recovery still faces several headwinds which may affect the financial markets and in turn EADS' business, including but not limited to:

- numerous requests by customers to postpone or cancel orders for aircraft due to, among other things, lack of adequate credit supply from the market to finance aircraft purchases or weak levels of passenger demand for air travel and cargo activity more generally;
- an increase in the amount of sales financing that EADS must provide to its customers to support aircraft purchases, thereby increasing its exposure to the risk of customer defaults despite any collateral interests in the underlying aircraft;
- strict monitoring of public spending for defence, homeland security and space due to budget constraints;
- economic distress or insolvency of key suppliers, resulting in product delays;
- the default of investment or derivative counterparties and other financial institutions, which could negatively impact EADS' treasury operations;

- continued de-leveraging as well as mergers and bankruptcies of banks or other financial institutions, resulting in a smaller universe of counterparties and lower availability of credit, which may in turn reduce the availability of bank guarantees needed by EADS for its businesses or restrict its ability to implement desired foreign currency hedges;
- changes in long-term interest rates, credit spreads or inflation, which may affect the discount rate applicable to the Group's pension liabilities, or poor financial performance of certain asset classes, thereby requiring an increase in the Group's provisions for retirement plans;
- changes in short-term interest rates, the potential illiquidity of certain asset classes or increases in the prices of raw materials, which may affect the financial performance of the Group;
- reduced access to capital markets and other sources of financing, which may limit EADS' future ability to make capital expenditures, fully carry out its research and development efforts and fund operations.

The not yet self-sustained economic recovery may lead to a longer period with marginal growth rates or even a return to recession, which could have a negative effect on EADS' future results of operation and financial condition. Economic weakness and uncertainty also make it more difficult for EADS to make accurate forecasts of revenue, earnings before interest and taxes, pre-goodwill impairment and exceptionals ("EBIT*") and cash flow, and may increase the volatility of EADS' stock price.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

Exposure to Foreign Currencies

A significant portion of EADS' revenues is denominated in US dollars, while a substantial portion of its costs is incurred in euro, and to a lesser extent, in pounds sterling. Consequently, to the extent that EADS does not use financial instruments to hedge its exposure resulting from this foreign currency mismatch, its profits will be affected by market changes in the exchange rate of the US dollar against these currencies, and to a lesser extent, by market changes in the exchange rate of pound sterling against the euro. EADS has therefore implemented a long-term hedging portfolio to help secure the rates at which a portion of its future US dollar-denominated revenues (arising primarily at Airbus and in the commercial satellite business) are converted into euro or pound sterling, in order to manage and minimise this foreign currency exposure.

There are complexities inherent in determining whether and when foreign currency exposure of EADS will materialise, in particular given the possibility of unpredictable revenue variations arising from order cancellations, postponements or delivery delays. EADS may also have difficulty in fully implementing its hedging strategy if its hedging counterparties are unwilling to extend further credit, and is exposed to the risk of non-performance or default by these hedging counterparties. The exchange rates at which EADS is able to hedge its foreign currency exposure may also deteriorate, as has been the case during the past several years with the steady appreciation of the euro against the US dollar. Accordingly, EADS' foreign currency hedging strategy may not protect it from significant changes in the exchange rate of the US dollar to the euro and the pound sterling, in particular over the longer-term, which could have a negative effect on its results of operation and financial condition. In addition, the portion of EADS' US dollar-denominated

revenues that is not hedged in accordance with EADS' hedging strategy will be exposed to changes in exchange rates, which may be significant.

Currency exchange rate fluctuations in those currencies other than the US dollar in which EADS incurs its principal manufacturing expenses (mainly the euro) may have the effect of distorting competition between EADS and competitors whose costs are incurred in other currencies. This is particularly true with respect to fluctuations relative to the US dollar, as many of EADS' products and those of its competitors (*e.g.*, in the defence export market) are priced in US dollars. EADS' ability to compete with competitors may be eroded to the extent that any of EADS' principal currencies appreciates in value against the principal currencies of such competitors.

EADS' consolidated revenues, costs, assets and liabilities denominated in currencies other than the euro are translated into the euro for the purposes of compiling its financial statements. Changes in the value of these currencies relative to the euro will therefore have an effect on the euro value of EADS' reported revenues, costs, EBIT*, other financial result, assets and liabilities.

See "Management's Discussion and Analysis of Financial Condition and Results of Operations — 2.1.8 Hedging Activities" for a discussion of EADS' foreign currency hedging strategy. See "Management's Discussion and Analysis of Financial Condition and Results of Operations — 2.1.3.6 Accounting for Hedged Foreign Exchange Transactions in the Financial Statements" for a summary of EADS' accounting treatment of foreign currency hedging transactions.

Exposure to Sales Financing Risk

In support of sales, EADS may agree to participate in the financing of customers. As a result, EADS has a significant portfolio of leases and other financing arrangements with airlines and other customers. The risks arising from EADS' sales financing activities may be classified into two categories: (i) credit risk, which concerns the customer's ability to perform its obligations under a financing arrangement, and (ii) aircraft value risk, which primarily relates to unexpected decreases in the future value of aircraft. Measures taken by EADS to mitigate these risks include optimised financing and legal structures, diversification over a number of aircraft and customers, credit analysis of financing counterparties, provisioning for the credit and asset value exposure, and transfers of exposure to third

parties. No assurances may be given that these measures will protect EADS from defaults by its customers or significant decreases in the value of the financed aircraft in the resale market.

EADS' sales financing arrangements expose it to aircraft value risk, because it generally retains collateral interests in aircraft for the purpose of securing customers' performance of their financial obligations to EADS, and because it guarantees part of the market value of certain aircraft during limited periods after their delivery to customers. Under adverse market conditions, the market for used aircraft could become illiquid and the market value of used aircraft could significantly decrease below projected

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

amounts. In the event of a financing customer default at a time when the market value for a used aircraft has unexpectedly decreased, EADS would be exposed to the difference between the outstanding loan amount and the market value of the aircraft, net of ancillary costs (such as maintenance and remarketing costs, etc.). Similarly, if an unexpected decrease in the market value of a given aircraft coincided with the exercise window of an asset value guarantee with respect to that aircraft, EADS would be exposed to losing as much as the difference between the market value of such aircraft and the guarantee amount. No assurances may be given that the provisions taken by EADS will be sufficient to cover these potential shortfalls. Through the Airbus Asset Management department or as a result of past financing transactions, EADS is the owner of used aircraft, exposing it directly to fluctuations in the market value of these used aircraft.

Finally, EADS also has several outstanding backstop commitments to provide financing related to orders on Airbus' and ATR's backlog. While past experience suggests it is unlikely that all such proposed financing actually will be implemented, the recent financial crisis has resulted in a tightening in the credit markets and eliminated or reduced the amount of outside financing available to customers to fund their aircraft purchases. Accordingly, such customers may seek to increase their utilisation of backstop commitments provided by EADS. Depending on the agreement reached with customers, EADS' sales financing exposure could increase significantly in the future. Despite the measures taken by EADS to mitigate the risks arising from sales financing activities described above, EADS will be further exposed to the risk of defaults by its customers or significant decreases in the value of the financed aircraft in the resale market, which may have a negative effect on its future results of operation and financial condition.

Counterparty Credit Risk

In addition to the credit risk relating to sales financing as discussed above, EADS is exposed to credit risk to the extent of (i) non-performance by its counterparties for financial instruments, such as hedging instruments and cash investments, and (ii) price risks arising from the credit spreads embedded in cash investments. However, the Group has policies in place to avoid concentrations of credit risk and to ensure that credit risk is limited.

Cash transactions and derivative counterparties are contracted with a large number of financial institutions worldwide, but only if they meet certain high credit quality criteria. EADS has set up

a credit limit system to actively manage and limit its credit risk exposure. This limit system assigns maximum exposure lines to counterparties of financial transactions, based at a minimum on their credit ratings as published by Standard & Poor's, Moody's and Fitch Ratings, on a minimum amount of total assets and a maximum tolerable price to buy credit protection against the default of such counterparty. The respective limits are regularly monitored and updated, but there can be no assurances that despite these limits and the diversification of counterparties, EADS will not lose the benefit of certain derivatives, or cash investments, in case of a systemic extension of market disruptions.

Exposure on Equity Investment Portfolio

EADS holds several equity investments for industrial or strategic reasons, the business rationale for which may vary over the life of the investment. Equity investments are either accounted for using the equity method (associated companies), if EADS has the ability to exercise significant influence, or at fair value. If fair value is not readily determinable, the investment is measured at cost.

EADS' principal investment in associates is Dassault Aviation. The net asset value of this investment was €2.4 billion at 31 December 2009. EADS is exposed to the risk of unexpected material adverse changes in the fair value of Dassault Aviation and that of other associated companies. For equity investments

other than associates, which make up only a fraction of EADS' total assets, EADS regards the risk of negative changes in fair value or impairments on these investments as non-significant.

Treasury shares held by EADS are not considered to be equity investments. Additionally, treasury shares are not regarded as being exposed to risk, as any change in value of treasury shares is recognised directly in equity only when sold to the market and never affects net income. Treasury shares are primarily held to hedge the dilution risk arising from employee stock ownership plans and the exercise by employees of stock options.

Pension Commitments

EADS participates in several pension plans for both executive as well as non-executive employees, some of which are under funded. For further information related to these plans, see “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and “Notes to the Consolidated Financial Statements (IFRS) — Note 26B: Provisions for retirement plans”. Although EADS has recorded a provision in its balance sheet for its share of the under funding based on current estimates, there can be no assurance that these estimates will not be revised upward in the future, leading EADS to record additional provisions in respect of such plans.

Necessary adjustments of such provisions are driven by (i) the discount factor applied to calculate the net present value of the pension liabilities, (ii) the performance of the asset classes

which are represented in the pension assets, and (iii) additional cash injections contributed by EADS from time to time to the pension assets. EADS has put in place appropriate risk management systems to limit potential losses in the pension assets and to better match the characteristics of the pension liabilities with those of the pension assets as a long-term objective. Nevertheless, any required additional provisions would in turn have a negative effect on EADS’ total equity (net of deferred taxes), which could have a negative effect on its future financial condition.

For further information relating to financial market risks and the ways in which EADS attempts to manage these risks, see “Notes to the Consolidated Financial Statements (IFRS) — Note 35A: Financial risk management”.

2. Business-Related Risks

Commercial Aircraft Market Cyclicity

Historically, the market for commercial aircraft has shown cyclical trends, due in part to changes in passenger demand for air travel and cargo activity, which are in turn primarily influenced by economic or gross domestic product (“GDP”) growth. Other factors, however, play an important role in determining the market for commercial aircraft, such as (i) the average age and technical obsolescence of the fleet relative to new aircraft, (ii) the number and characteristics of aircraft taken out of service and parked pending potential return into service, (iii) passenger load factors, (iv) airline pricing policies, (v) airline financial health and the availability of outside financing for aircraft purchases, (vi) deregulation and (vii) environmental constraints imposed upon aircraft operations. EADS expects that the market for commercial aircraft, including the market for civil helicopters, will continue to be cyclical, and that downturns in broad economic trends may have a negative effect on its future results of operation and financial condition.

In particular, the recent volatility in the oil, financial and credit markets and overall economic uncertainty – including the high amount of losses recorded by the airline industry in 2009 – increase the risk that customers will seek to postpone or cancel otherwise binding contractual orders, to which EADS may agree. In addition, the liquidation or bankruptcy of airline customers could lead to the cancellation of their existing orders. If any of these events were to occur, it could significantly reduce EADS’ revenues and ability to generate a profit.

Moreover, EADS may be required to adopt significant changes to its business plan in response to market conditions, including production rate changes or the re-configuration of aircraft originally intended for customers whose orders have been postponed or cancelled. Failure to successfully implement such changes or the incurrence of higher than expected costs in doing so could have a negative effect on EADS’ future results of operation and financial condition.

[Back to Contents](#)

Impact of Terrorism, Epidemics and Catastrophic Events on Commercial Aircraft Market

As the terrorist attacks in New York and Madrid and the spread of H1N1 flu have demonstrated, terrorism and epidemics may negatively affect public perception of air travel safety and comfort, which may in turn reduce demand for air travel and commercial aircraft. The outbreak of war in a given region may also affect the willingness of the public to travel by air. Furthermore, major airplane crashes may have a negative effect on the public's or regulators' perceptions of the safety of a given class of aircraft, form of design, or airline. As a consequence of

terrorism, epidemics and other catastrophic events, an airline may be confronted with sudden reduced demand for air travel and be compelled to take costly security and safety measures. In response to such events, and the resulting negative impact on the airline industry or particular airlines, EADS may suffer from a decline in demand for all or certain types of its aircraft, and EADS' customers may postpone delivery of new aircraft or cancel orders.

Dependence on Public Spending and on Certain Markets

In any single market, public spending (including defence spending) depends on a complex mix of geopolitical considerations and budgetary constraints. Public spending may be subject to significant fluctuations from year to year and country to country. Adverse economic and political conditions as well as downturns in broad economic trends in EADS' markets such as those experienced recently may reduce the amount of public spending and have a negative effect on EADS' future results of operations and financial condition.

In the case where several countries undertake to enter together into defence or other procurement contracts, economic, political

or budgetary constraints in any one of these countries may have a negative effect on the ability of EADS to enter into or perform such contracts.

Further, a significant portion of EADS (including Airbus) backlog is concentrated in certain regions or countries, including the United States of America, China, India and the United Arab Emirates. Adverse economic and political conditions as well as downturns in broad economic trends in these countries or regions may have a negative effect on EADS' and Airbus' future results of operations and financial condition.

Availability of Government and Other Sources of Financing

Since 1992, the EU and the US have operated under an agreement that sets the terms and conditions of financial support that governments may provide to civil aircraft manufacturers. In late 2004, however, the US sought to unilaterally withdraw from this agreement, which eventually led to the US and the EU making formal claims against each other before the World Trade Organization ("WTO"). While both sides have expressed a preference for a negotiated settlement that provides for a level playing field when funding future aircraft developments, they have thus far failed to reach agreement on key issues. The terms and conditions of any new agreement, or the outcome of the formal WTO proceedings, may limit access by EADS to risk-sharing-funds for large projects, may establish an unfavourable balance of access to government funds by EADS

as compared to its US competitors or may theoretically cause the European Commission and the involved governments to analyse possibilities for a change in the commercial terms of funds already advanced to EADS.

In prior years, EADS and its principal competitors have each received different types of government financing of product research and development. For example, EADS is in discussions with or has recently arranged for financing from certain EU countries for the development of the A350 XWB commercial aircraft programme. However, no assurances can be given that government financing will continue to be made available in the future for the A350 XWB or other projects, in part as a result of the proceedings mentioned above.

Moreover, the availability of other outside sources of financing will depend on a variety of factors such as market conditions, the general availability of credit, EADS' credit ratings, as well as the possibility that lenders or investors could develop a negative perception of EADS' long- or short-term financial prospects if it incurred large losses or if the level of its business

activity decreased due to an economic downturn. EADS may therefore not be able to successfully obtain additional outside financing on favourable terms, or at all, which may limit EADS' future ability to make capital expenditures, fully carry out its research and development efforts and fund operations.

Emergence of Public-Private Partnerships and Private Finance Initiatives

Defence customers, particularly in the UK, increasingly request proposals and grant contracts under schemes known as public-private partnerships ("PPPs") or private finance initiatives ("PFIs"). PPPs and PFIs differ substantially from traditional defence equipment sales, as they often incorporate elements such as:

- the provision of extensive operational services over the life of the equipment;
- continued ownership and financing of the equipment by a party other than the customer, such as the equipment provider;
- mandatory compliance with specific customer requirements pertaining to public accounting or government procurement regulations; and

- provisions allowing for the service provider to seek additional customers for unused capacity.

EADS is party to PPP and PFI contracts, for example through Paradigm with Skynet 5 and related telecommunications services, and in the AirTanker (FSTA) project. One of the complexities presented by PFIs lies in the allocation of risks and the timing thereof among different parties over the lifetime of the project.

There can be no assurances of the extent to which EADS will efficiently and effectively (i) compete for future PFI or PPP programmes, (ii) administer the services contemplated under the contracts, (iii) finance the acquisition of the equipment and the ongoing provision of services related thereto, or (iv) access the markets for the commercialisation of excess capacity. EADS may also encounter unexpected political, budgetary, regulatory or competitive risks over the long duration of PPP and PFI programmes.

Competition and Market Access

Most of EADS' businesses are subject to significant competition, and Airbus in particular has been affected by downward price pressure resulting from such competition. EADS believes that some of the underlying causes of such price competition have been mitigated by restructuring in the aerospace and defence industry. Nevertheless, certain customers have had greater leverage to encourage competition with respect to a variety of issues, including price and payment terms. Competition may intensify in the future, particularly in the context of a prolonged economic downturn. There can be no assurance that EADS will be able to compete successfully against its current or future competitors or that the competitive pressures it faces in all business areas will not result in reduced revenues or market share.

In addition, the contracts for many aerospace and defence products are awarded, implicitly or explicitly, on the basis of home country preference. Although EADS is a multinational company which helps to broaden its domestic market, it may remain at a competitive disadvantage in certain countries, especially outside of Europe, relative to local contractors for certain products. The strategic importance and political sensitivity attached to the aerospace and defence industries means that political considerations will play a role in the choice of many products for the foreseeable future.

Technologically Advanced Products and Services

EADS offers its customers products and services that are often technologically advanced, the design and manufacturing of which can be complex and require substantial integration and coordination along the supply chain. In addition, most of EADS' products must function under demanding operating conditions. Even though EADS believes it employs sophisticated design, manufacturing and testing practices, there can be no assurance that EADS' products or services will be successfully developed, manufactured or operated or that they will be developed or will perform as intended.

Certain of EADS' contracts require it to forfeit part of its expected profit, to receive reduced payments, to provide a replacement launch or other products or services, or to reduce the price of subsequent sales to the same customer if its products fail to be delivered on time or to perform adequately. No assurances can be given that performance penalties or contract

cancellations will not be imposed should EADS fail to meet delivery schedules or other measures of contract performance. For example, certain customers decided to cancel their A380 freighter orders following the production difficulties that EADS encountered in 2006, while in 2009, South Africa announced that it would cancel its A400M order following the announcement of significant delivery delays on the programme.

In addition to any costs resulting from product warranties, contract performance or required remedial action, such problems may result in increased costs or loss of revenues – in particular as a result of contract cancellations – which could have a negative effect on EADS' future results of operation and financial condition. Any problems in this respect may also have a significant adverse effect on the competitive reputation of EADS' products.

Major Research and Development Programmes

The business environment in many of EADS' principal operating business segments is characterised by extensive research and development costs requiring significant up-front investments with a high level of complexity. The business plans underlying such investments often contemplate a long payback period before these investments are recouped, and assume a certain level of return over the course of this period in order to justify the initial investment. There can be no assurances that the commercial, technical and market assumptions underlying such business plans will be met, and consequently, the payback period or returns contemplated therein achieved. EADS expects that its consolidated research and development expenses may increase significantly in future years in connection with the ramp-up of new programmes across all Divisions, in particular development of the A350 XWB.

Successful development of new programmes also depends on EADS' ability to attract and retain aerospace engineers and other professionals with the technical skills and experience required to meet its specific needs. Demand for such engineers may often exceed supply depending on the market, resulting in intense competition for qualified professionals. There can be no assurances that EADS will attract and retain the personnel it requires to conduct its operations successfully. Failure to attract and retain such personnel or an increase in EADS' employee turnover rate could negatively affect EADS' future results of operation and financial condition.

"Power8", "Power8 Plus" and "Future EADS" Restructuring and Cost Saving Programmes

In 2007, EADS announced the implementation of a significant cost reduction and restructuring programme at Airbus, referred to as "Power8". This programme looks at all aspects of Airbus to make it leaner, more integrated, more efficient and more

productive. As part of Power8, Airbus management is seeking to implement strong cost reduction and cash generating efforts with the goal of achieving EBIT* contributions of €2.1 billion from 2010 onwards and an additional €5 billion of cumulative

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

1

2

3

4

5

Back to Contents

cash flow from 2007 to 2010. A large part of the cost savings is expected to be realised through the reduction of Airbus' headcount by 10,000 employees (with temporary and on-site subcontractors accounting for approximately 50% of such reduction).

In addition, in 2008, EADS launched a Group-wide cost savings programme referred to as "Power8 Plus", with the goal of achieving gross annual savings of €1 billion targeted for the end of 2012. Airbus is expected to contribute roughly two-thirds of the targeted cost savings, with the remaining portion to be contributed by the Eurocopter, Astrium and Defence & Security divisions as well as by EADS headquarters.

Finally, EADS is currently working on a further integration and cost savings programme referred to as "Future EADS", with the goal of achieving gross annual savings of €350 million targeted for the end of 2012. The programme aims at further integration, improvement of decision making process and cost savings through the Headquarters, the Divisions and the interaction between Headquarters and the Divisions. As part of this initiative, the former Military Transport Aircraft division has been integrated into Airbus under the name of "Airbus Military". See "Information on EADS' Activities — 1.1.2 Airbus — Airbus Military" below.

Anticipated cost savings, in particular those related to "Power8 Plus" and "Future EADS", are based on preliminary estimates, however, and actual savings under these programmes may vary significantly. In particular, EADS' cost reduction measures are based on current conditions and do not take into account any future cost increases that could result from changes in its industry or operations, including new business

developments, wage and cost increases or other factors. EADS' failure to successfully implement these planned cost reduction measures, or the possibility that these efforts may not generate the level of cost savings it expects going forward, could negatively affect its future results of operation and financial condition.

In addition to the risk of not achieving the anticipated level of cost savings from the programmes above, EADS may also incur higher than expected implementation costs, depending on the outcome of its current negotiations with labour and other stakeholders. In many instances, there may be internal resistance to the various organisational restructuring and cost reduction measures contemplated, including site divestitures by Airbus and the integration of the Military Transport Aircraft division into Airbus. Restructuring, closures, site divestitures and job reductions may also harm EADS' labour relations and public relations, and have led and could lead to work stoppages and/or demonstrations. In the event that these work stoppages and/or demonstrations become prolonged, or the costs of implementing the programmes above are otherwise higher than anticipated following such negotiations, EADS' future results of operation and financial condition may be negatively affected.

Finally, EADS may fail to fully realise the anticipated benefits of the programmes above. Divestitures may result in continued financial involvement in the divested businesses following the transaction, such as through guarantees or other financial arrangements. They may also trigger the recording of an impairment charge at or prior to closing, which would have a negative impact on EADS' future results of operation. Risk-sharing partners at divested businesses may also fail to perform as expected.

Dependence on Certain Suppliers and Subcontractors

EADS is dependent on numerous key suppliers and subcontractors to provide it with the raw materials, parts and assemblies that it needs to manufacture its products. Certain of these suppliers have experienced severe financial difficulties in light of the recent financial crisis. If these difficulties were to intensify, some suppliers could be forced to reduce their output, shut down their operations or file for bankruptcy protection, which could disrupt the delivery of supplies to EADS. It may be difficult for EADS to find a replacement for certain suppliers without significant delay, which could negatively affect EADS' future results of operation and financial condition. EADS may decide in the future to provide financial or other assistance to certain suppliers to ensure an uninterrupted supply of materials and parts, which could expose it to credit risk on the part of such suppliers.

EADS' suppliers or subcontractors may also make claims or assertions against it for higher prices or other contractual compensation, in particular in the event of significant changes to development or production schedules, which could negatively affect EADS' future profitability.

Finally, if the macro-economic environment leads to higher than historic average inflation, the labour and procurement costs of EADS may increase significantly in the future. This may lead to higher component and production costs which could in turn negatively impact EADS' future profitability and cash flows, to the extent EADS is unable to pass these costs on to its customers or require its suppliers to absorb such costs.

Programme-Specific Risks

In addition to the risk factors mentioned above, EADS also faces the following programme-specific risks (while this list does not purport to be comprehensive, it highlights the current risks believed to be material by management):

- *A400M programme.* For a description of recent developments related to the A400M programme, including certain management assumptions made in connection with the preparation of the 2009 consolidated financial statements, see “Information on EADS’ Activities — 1.1.2 Airbus — Airbus Military”, “Information on EADS’ Activities — 1.2 Recent Developments”, “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and “Notes to the Consolidated Financial Statements (IFRS) — Note 3: Accounting for the A400M programme”. In addition to the financial and negotiation risks described therein, the Company also faces the following challenges: (i) managing a flight test programme that differs significantly from that of commercial Airbus aircraft, (ii) integrating the civil systems (flight management, navigation, etc.) with the complex military systems, (iii) ensuring that the aircraft is both commercially certified and meets the range of military qualifications required by programme customers, (iv) managing the anticipated difficulties on the ramp-up, and (v) meeting the new negotiated time schedule;
- *A380 programme.* In connection with the A380 programme, EADS faces the following main challenges: (i) management of stress in the supply chain as a result of the steep ramp-up in production in coming years, (ii) successful implementation of a digital mock-up for future A380 production, (iii) managing maturity in service and (iv) avoidance of production disruptions and related costs, in particular in connection with the development of new customised versions and the implementation of Power8. EADS’ ability to successfully meet these challenges will be critical in ensuring the smooth production of “Wave 2” aircraft, *i.e.* those beyond the initial 25 aircraft produced;
- *A350 XWB programme.* In connection with the A350 XWB programme, EADS faces the following main challenges: (i) ensuring the maturity of technology, (ii) meeting the technical performance targets for the aircraft and respecting the development schedule, (iii) ensuring the ramp-up of key skilled personnel, *e.g.* for composite stress and design, (iv) securing the achievement of recurring cost targets, (v) ensuring that the new industrial organisation resulting from Power8 supports effective development, and (vi) ensuring the performance of the risk sharing partners, including those selected for sites divested by Airbus;
- *NH90 programme.* In connection with the NH90 programme, EADS faces the following main challenges: (i) meeting the development schedule, the cost objectives and the technical content (full operational configuration of the TTH (Tactical Transport Helicopter) version and final configuration of the NFH (NATO Frigate Helicopter) version) of ongoing development programmes on the numerous versions, (ii) managing the industrial ramp-up on the programme, and (iii) assuring support readiness in connection with multiple fleets entering into service; and
- *Saudi border surveillance.* In connection with the Saudi border surveillance programme, EADS faces the following main challenges: (i) meeting the schedule and cost objectives with a high number of sites to deliver and the integration of COTS products (radars, cameras, sensors) with their interfaces into the system, (ii) assuring an efficient project and staffing ramp-up, and (iii) managing the rollout including subcontractors as well as training and organisational adaptation of the customer.

3. Legal Risks

Dependence on Joint Ventures and Minority Holdings

EADS generates a substantial proportion of its revenues through various consortia, joint ventures and equity holdings. These arrangements include primarily:

- the Eurofighter and AirTanker consortia;
- three principal joint ventures: MBDA, ATR and Atlas Elektronik;
- majority interest: Dornier GmbH; and
- investment in associates: Dassault Aviation.

The formation of partnerships and alliances with other market players is an integral strategy of EADS and the proportion of sales generated from consortia, joint ventures and equity holdings may rise in future years. This strategy may from time to time lead to changes in the organisational structure, or realignment in the control, of EADS' existing joint ventures.

EADS exercises varying and evolving degrees of control in the consortia, joint ventures and equity holdings in which it participates. While EADS seeks to participate only in ventures in which its interests are aligned with those of its partners, the risk of disagreement or deadlock is inherent in a jointly controlled entity, particularly in those entities that require the unanimous consent of all members with regard to major decisions and specify limited exit rights. The other parties in these entities may also be competitors of EADS, and thus may have interests that differ from those of EADS.

In addition, in those holdings in which EADS is a minority partner or shareholder, EADS' access to the entity's books and records, and as a consequence, EADS' knowledge of the entity's operations and results, is generally limited as compared to entities in which EADS is a majority holder or is involved in the day-to-day management.

Product Liability and Warranty Claims

EADS designs, develops and produces a number of high profile products of large individual value, particularly civil and military aircraft and space equipment. EADS is subject to the risk of product liability and warranty claims in the event that any of its

products fails to perform as designed. While EADS believes that its insurance programmes are adequate to protect it from such liabilities, no assurances can be given that claims will not arise in the future or that such insurance cover will be adequate.

Intellectual Property

EADS relies upon patent, copyright, trademark and trade secret laws, and agreements with its employees, customers, suppliers and other parties, to establish and maintain its intellectual property rights in technology and products used in its operations. Despite these efforts to protect its intellectual property rights, any of EADS' direct or indirect intellectual property rights could be challenged, invalidated or circumvented. Further, the laws of certain countries do not protect EADS' proprietary rights to the same extent as the laws in Europe and the United States. Therefore, in certain jurisdictions EADS may

be unable to protect its proprietary technology adequately against unauthorised third-party copying or use, which could adversely affect its competitive position.

In addition, although EADS believes that it lawfully complies with the intellectual property rights granted to others, it could have claims asserted against it for infringement of the intellectual property rights of third parties. These claims could harm its reputation, cost it money and prevent it from offering certain products or services. Any claims or litigation in this

area, whether EADS ultimately wins or loses, could be time-consuming and costly, injure EADS' reputation or require it to enter into licensing arrangements. EADS might not be able to

enter into these licensing arrangements on acceptable terms. If a claim of infringement were successful against it, an injunction might be ordered against EADS, causing further damages.

Export Controls and Other Regulations

The export market is a significant market for EADS. In addition, many of the products EADS designs and manufactures for military use are considered to be of national strategic interest. Consequently, the export of such products outside of EADS' domestic markets may be restricted or subject to licensing and export controls, notably by the UK, France, Germany and Spain, where EADS carries out its principal military activities as well as by other countries where suppliers come from, notably, the US. There can be no assurance (i) that the export controls to which EADS is subject will not become more restrictive, (ii) that new generations of EADS products will not also be subject to similar or more stringent controls or (iii) that geopolitical factors will not make it impossible to obtain export licenses for one or more clients or constrain EADS' ability to perform under previously signed contracts. Reduced access to military export markets

may have a material adverse effect on EADS' business, financial condition and results of operations.

EADS is also subject to a variety of other governmental regulations that may adversely affect its business and financial condition, including among others, regulations relating to commercial relationships, the use of its products and dealings with foreign officials. In addition, EADS' ability to market new products and enter new markets may be dependent on obtaining government certifications and approvals in a timely manner. Although EADS seeks to comply with all such regulations, even unintentional violations or a failure to comply could have a material adverse effect on EADS' business, financial condition and results of operations.

Litigation

EADS is currently engaged in a number of legal proceedings, particularly with respect to securities litigation arising out of the A380 programme delays announced in 2006. See "Information on EADS' Activities — 1.1.9 Legal and Arbitration Proceedings". Although EADS is unable at this point to predict the outcome of these proceedings, it is possible that they will result in the imposition of damages, fines or other remedies, which could

have a negative effect on EADS' business, financial condition and results of operations. An unfavourable ruling could also negatively impact EADS' stock price and reputation. In addition, EADS expects to continue to incur time and expenses associated with its defence, regardless of the outcome, and this may divert the efforts and attention of management from normal business operations.

4. Industrial and Environmental Risks

Given the scope of its activities and the industries in which it operates, EADS is subject to stringent environmental, health and safety laws and regulations in numerous jurisdictions around the world. EADS therefore incurs, and expects to continue to incur, significant capital expenditure and other operating costs to comply with increasingly complex laws and regulations covering the protection of the natural environment as well as occupational health and safety, including costs to prevent, control, eliminate

or reduce emissions into the environment, releases of air pollutants into the atmosphere, discharges to surface and subsurface water and soil, usage of certain substances and the content of EADS' products, the disposal and treatment of waste materials, and costs to comply with reporting or warning regulations. Moreover, new laws and regulations, the imposition of tougher licence requirements, increasingly strict enforcement or new interpretations of existing laws and regulations may

1

2

3

4

5

[Back to Contents](#)

cause EADS to incur increased capital expenditure and operating costs in the future in relation to the above, which could have a negative effect on its results of operation and financial condition.

If EADS fails to comply with these environmental, health and safety laws and regulations, even if caused by factors beyond its control, that failure may result in the assessment of civil or criminal penalties and fines against it. Regulatory authorities may require EADS to conduct investigations and undertake remedial activities, curtail operations or close installations or facilities temporarily, including to prevent imminent risks. In the event of an industrial accident or other serious incident, employees, customers and other third parties may file claims for personal injury, property damage or damage to the environment (including natural resources). Further, liability under some environmental laws relating to contaminated sites can be imposed retroactively, on a joint and several basis, and without any finding of non-compliance or fault. These potential liabilities may not always be covered by insurance, or may be only partially covered. The obligation to compensate for such damages could have a negative effect on EADS' results of operation and financial condition.

In addition, the various products manufactured and sold by EADS must comply with relevant environmental, health and safety and substances/preparations related laws and regulations in the jurisdictions in which they operate. Although EADS seeks to ensure that its products meet the highest quality standards, increasingly stringent and complex laws and regulations, new scientific discoveries, delivery of defective products or the obligation to notify or provide regulatory authorities or others with required information (such as under the EU regulation known as "REACH", which addresses the production and use of chemical substances) may force EADS to adapt, redesign, redevelop, recertify and/or eliminate its products from the market. Seizures of defective products may be pronounced, and EADS may incur administrative, civil or criminal liability. In the event of an accident or other serious incident involving a product, EADS may be required to conduct investigations and undertake remedial activities. Employees, customers and other third parties may also file claims for personal injury, property damage or damage to the environment (including natural resources). Any problems in this respect may also have a significant adverse effect on the competitive reputation of EADS' products.

1.1 Presentation of the EADS Group

1.1.1 Overview

Due to the nature of the markets in which EADS operates and the confidential nature of its businesses, any statements with respect to EADS' competitive position set out in paragraphs 1.1.1 through 1.1.7 below have been based on EADS' internal information sources, unless another source has been specified below.

With consolidated revenues of €42.8 billion in 2009, EADS is Europe's premier aerospace and defence company and the second largest aerospace and defence company in the world. In terms of market share, EADS is among the top two manufacturers of commercial aircraft, civil helicopters, commercial space launch vehicles and missiles, and a leading supplier of military aircraft, satellites and defence electronics. In 2009, it generated approximately 75% of its total revenues in the civil sector and 25% in the defence sector.

2009 HIGHLIGHTS

In 2009, EADS demonstrated resilience in a difficult market environment. Despite the economic downturn, EADS protected its capacity to grow and innovate, thanks to a broad business portfolio, increased defence and institutional activities and a solid net cash position. EADS also succeeded in maintaining a strong order backlog, which at €389.1 billion as of 31 December 2009 represents several years of full production. The Group marked the beginning of its 10th anniversary with a succession of significant milestones in 2009: A400M and EC175 first flights and celebration of the 30th anniversary of the Ariane launcher.

For the full year 2009, EADS delivered an EBIT* of €-322 million, which was burdened by A400M and A380 provisions and negative foreign exchange rate impacts. The net cash position of €9.8 billion at 31 December 2009 benefited from better than expected free cash flow and remains a strong asset for the Group. The net cash figure includes customer payments at year-end 2009 which had been expected for 2010.

From an economic standpoint, EADS' performance continues to be burdened by a weakening hedge book over time. In 2009, EADS dollar hedges matured at an average rate of 1€ = US\$ 1.26, compared to a rate of 1€ = US\$ 1.18 in 2008.

Within a difficult economic environment, EADS and its Divisions are pursuing improvement programmes and cost saving actions. Launched early in 2007, Airbus' turnaround

programme Power8 exceeded targets, delivering gross cost savings of €2 billion in 2009 compared to the projected cost baseline. Power8 Plus, launched in 2008, aims to add a further €650 million in gross annual savings for Airbus and a total of €1 billion in gross annual savings overall for the Group against the projected cost base by the end of 2012. The "Future EADS" programme – launched at the end of 2008 with the goal of achieving gross annual savings of €350 million against the projected cost base by the end of 2012 – aims at further integrating the organisational structure, improving the decision making processes and saving costs. In 2009, Eurocopter launched a new corporate transformation programme called SHAPE in order to adapt the company to the new economic context while maintaining sustainable growth and aiming to save €200 million annually compared to the projected cost base by the end of 2011. The programme includes Eurocopter's contribution to Future EADS. Priority is currently being given to cash protection through focused capital expenditures and research and development expenses, in order to protect the Group while preparing for the future.

As a result of constructive negotiations over several months, the launch customer nations and EADS/Airbus/AMSL came to an agreement in principle regarding the A400M programme in March 2010, with the intention to amend the original A400M launch contract accordingly. As part of this agreement in principle (the "**A400M Understanding**"), the launch customer nations have agreed to: increase the price of the contract by €2 billion; waive all liquidated damages related to current delays; provide an additional amount of €1.5 billion in exchange for a participation in future export sales (Export Levy Facilities); and accelerate pre-delivery payments in the period of 2010 to 2014 according to a new delivery plan.

Given the progress made on the commercial negotiations between EADS and the launch customer nations since the fourth quarter of 2009, the successful first flight of the A400M and the significantly higher visibility on total expected production costs on the A400M programme, EADS re-assessed the A400M loss-making contract provision which led to the recording of an additional loss-making contract provision and charges totalling €-1.8 billion in 2009. As the envisaged contractual amendments currently reflected in the A400M Understanding and its related documents have not been finalised yet with the launch customer nations, the re-assessment of the A400M loss-making contract

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

Back to Contents

provision has been determined based on the best estimate of EADS' management and may be subject to changes depending on the final contracts to be implemented. If substantial changes on this assessment were to occur, EADS' future financial performance could be significantly impacted.

The year 2009 was also characterised by changes in the Board of Directors and Executive Committee of the Group. Bodo Uebber was appointed Chairman of the Board of Directors in April 2009, succeeding Rüdiger Grube. After the annual general meeting of shareholders held in May 2009, the Board of Directors welcomed a new member (Wilfried Porth) to fill the vacancy. Prior to this, the Board of Directors appointed Domingo Ureña-Raso as the new Head of Airbus Military. In October 2009, Sean O'Keefe was appointed as Head of EADS North America, while Ralph Crosby will concentrate on his role as Chairman of EADS North America.

Following the financial crisis, the industry finished 2009 faced with some significant challenges to tackle, although some early signs of a recovery were already emerging. The commercial aviation business experienced the largest ever decline in passenger demand with a significant impact on airlines' operations and profitability. Aircraft manufacturers were required to take strong pro-active efforts to maintain the solid order books built over the preceding years. Defence and institutional activities proved less vulnerable to the downturn, as government spending is planned several years in advance.

Given continued uncertainty surrounding the duration of the economic downturn and the continuing effects, market actors need to remain attentive to the full spectrum of value drivers available. The weak US dollar has disadvantaged EU companies with a cost base mainly in euros whereas US manufacturers experienced some benefit as US exports became more attractive.

Despite short-term challenges, air traffic growth forecasts and indications of consolidation in the airline industry, the civil business maintained solid order backlogs. Historically, air traffic follows changes in annual global GDP and consequently the recession has had an important slowdown effect on air transport and passenger traffic. Encouraging improvements were recorded at the end of the year, and longer-term growth in global passenger demand looks positive.

European defence budgets have been relatively stable over time but are facing increasing pressure as a result of public debts. This could limit growth. However, the long-term nature of the investments in defence and space makes these segments less exposed to short term effects. Sustained growth in security spending both from government and private sectors has been driven by the continued presence of security and defence threats as well as an increased awareness of emergency response requirements (adverse weather conditions, pandemics, etc).

Airbus delivered a total of 498 aircraft in 2009, 15 more than in 2008, which represents a new company delivery record for a single year. A380 deliveries fell short of the target set at the beginning of 2009, due to continued ramp-up difficulties. In December 2009, the A380's production was reviewed and improvement measures have since been introduced to minimise delays on the final assembly line. Despite challenging market conditions, Airbus met its order intake target with a total of 310 gross orders worth US\$ 34.9 billion at list prices, or 54% of the worldwide market share of aircraft of more than 100 seats. Three years after its launch the next generation A350XWB passed the 500 orders milestone.

Further company streamlining saw the formation of Airbus Military, signalling the full integration of military aircraft programmes within Airbus. In December 2009, the A400M took off for its maiden flight. Conversion work for the first A330-based Multi-Role Tanker Transport ("MRTT") for the Royal Australian Air Force was completed and the MRTT received a further incremental order for three aircraft, raising the total orders to 28 at the end of 2009. The smaller military transport aircraft segment won 15 orders from seven customers in 2009. These include two orders for the C-212, two for the CN-235 and 11 for the C-295.

Eurocopter met its business and delivery objectives for 2009 with revenues of €4.6 billion, roughly at the same level as in 2008. Service activities accounted for 35% of revenues in 2009. Eurocopter's key highlights in 2009 were the roll-out of the KUH (Korean Utility Helicopter) and the maiden flight of the EC175, a joint development with AVIC of China. The Tiger proved its operational reliability while deployed in Afghanistan with the French forces. NH90 deliveries continued throughout 2009, with 40 tactical transport version helicopters now in service in five countries. About 100 UH-72A Lakota have now been delivered to the US Army and Navy and a further 51 Lakotas were ordered in December 2009.

Regarding order bookings, a net total of 344 new aircraft were sold in 2009 (715 in 2008), which allowed Eurocopter to secure its leading position in 2009 in a weak civil and parapublic market. The sharp order decline in the civil market for light helicopters due to the economic crisis was over-compensated by military orders in terms of value. Eurocopter's total order backlog at the end of 2009 amounted to 1,303 helicopters, or the equivalent of €15.1 billion, an increase of more than €1 billion compared to the end of 2008. Deliveries remained stable with 558 new civil and military helicopters delivered in 2009.

Astrium achieved strong growth in 2009 with revenues of €4.8 billion and new orders totalling €8 billion, including a €4 billion order from Arianespace to produce 35 Ariane 5 launchers and a €500 million contract from SES ASTRA for 4 multi-purpose telecommunication satellites. The Ariane 5 launcher continued to prove its reliability, completing seven launches for the year,

for a sequence of 35 successful launches in a row. In the defence sector, Astrium also successfully tested the M51 ballistic missile and placed both the Spirale demonstrator and the Helios 2B military surveillance satellite in orbit for France. During a record year for telecommunications satellites, with seven new orders representing one quarter of the worldwide market, the COMSATBw-1 military communication satellite was placed in orbit for Germany. Despite missing out on the ESA contract for the next batch of Galileo satellites, Astrium will be responsible for a large part of the contract's value through subcontracting work for Astrium subsidiaries. Astrium remains committed to competing for the next batch.

Revenues at EADS Defence & Security (the "DS Division" or "DS") remained roughly stable in 2009. The Eurofighter partner nations awarded the Tranche 3a contract for 112 aircraft, which strengthened the Division's position in the global combat aircraft market. The year saw the delivery of the 200th Eurofighter. DS was awarded the border security programme covering the full borders of the Kingdom of Saudi Arabia. With this contract, DS confirmed its competitive position as lead systems integrator for global security projects. Regarding unmanned aerial vehicles ("UAVs"), 2009 was marked by the successful test of the UAV demonstrator Barracuda and completion of the risk reduction study for the Talarion UAV on behalf of France, Germany and Spain. Security capabilities developed through the expansion of TETRA networks in India, China, and Bulgaria. Adapting to new worldwide threats, DS participated in improving potential responses to cyber attacks thanks to its pioneering new solution for supervising information system security, "Cockpit Security".

The good performance of the military, institutional and space businesses in 2009 has demonstrated the validity of the Vision 2020 goal of counterbalancing revenues from the Airbus commercial aviation business with revenues from the other Divisions. EADS will further focus on eco-efficiency and research and development to prepare the Company for the future.

STRATEGY

In order to maximise value for its shareholders, management intends to reinforce EADS' position as a leader in major global aerospace and defence markets. Beyond addressing current operational challenges, EADS will continue to focus on providing superior value to its customers through innovative product and service solutions. EADS has defined the following long-term objectives for the future pursuant to its Vision 2020 plan:

➤ *Improve portfolio balance between Airbus Commercial manufacturing and other EADS activities.* In 2009, revenues at Airbus Commercial represented 61.6% of EADS' consolidated revenues for the year. As a result, the Group remains highly vulnerable to commercial aircraft cycles, the financial burden and risk associated with aircraft programmes and US dollar exchange rate fluctuation. EADS will therefore seek to increase the contribution to revenues from other business

segments in future years, while still maintaining long-term parity with Boeing in the commercial aircraft segment. In particular, EADS will seek to increase the proportion of revenues emanating from its defence, security and services businesses, which tend to be less cyclical and more predictable in nature. The Group will consider all options for achieving such growth, including targeted acquisitions or partnerships that enhance its overall competitive position and add capabilities to its portfolio, in particular in Asia, the Middle East and the Americas;

➤ *Increase profitability.* Through better internal cost control, reduced capital intensity, enhanced programme and risk management and with a more streamlined industrial organisation, EADS has taken the initial steps towards restoring its profitability. EADS intends to increasingly focus on its core activities, which means moving towards a new business model and reallocating resources away from certain non-core legacy activities. Through more optimal resource allocation and stronger development of more profitable segments, EADS will strive to establish a level of profitability that is both attractive to its shareholders and sufficient to fund its future development initiatives;

➤ *Expand its services offering.* Historically, EADS' growth has been driven by the sale of technologically advanced products and solutions. At the same time, management is focused on increasing EADS' presence in the high value services market, given its countercyclical nature and opportunities for sustained growth. Factors supporting this market include the rapid expansion of EADS' in-service commercial and defence fleet — which will require support throughout its lifecycle — as well as the increasing tendency on the part of defence and governmental agencies to outsource various key functions. EADS will seek to provide high value-added services related to both platforms and systems, including training, advanced in-service support and air traffic management systems. Revenue from services activities is targeted to account for 25% of EADS' consolidated revenues by 2020. Such ambitions would require further growth as EADS intends to continue playing an increasingly important role in Europe;

➤ *Become a truly global industrial group.* A significant portion of EADS' suppliers, facilities and employees are based in Europe, while the majority of its revenues originate from outside of Europe. In order to achieve access to certain markets and technology, optimise costs and hedge against future US dollar volatility, EADS will aim to implement a long-term industrial strategy that corrects this imbalance by expanding its industrial footprint and partnerships in key markets outside of Europe, including the Americas, China, Russia and India. In the US, the goal is to establish a firm industrial and commercial presence in the world's largest defence and homeland security market. Consequently, by 2020, EADS is seeking to have 40% of its sourcing and 20% of its employees based outside of Europe;

1

2

3

4

5

Back to Contents

- *Continue to foster innovation.* Innovation in product, technology, manufacturing and customer offerings will define EADS' future. With development cycles shortening and new competitors emerging in all fields, EADS must maintain its technological edge and cover a broad spectrum of capabilities in order to remain a market leader. To maintain its innovative edge, EADS will seek to systematically employ the latest digital design and engineering tools in order to complete major platform developments more quickly, and will seek to accelerate the pace at which it reviews its core technologies so as to close gaps against the competition. These core technologies are expected to include CAI, network centric operations and UAV technology, among others;
- *Focus on the environment.* EADS will seek to anticipate and address future environmental challenges as part of its commitment to reconciling environmental responsibility with economic success. Being greener, cleaner, quieter and smarter, the A380 has already set new standards for air transport and the environment. EADS will pursue additional initiatives in the future – including a comprehensive environmental management system based on ISO 14001 to cover all EADS activities – in order to render eco-efficiency a competitive advantage over the long-term.

ORGANISATION OF EADS BUSINESSES

EADS organises its businesses into the following four operating Divisions: (1) Airbus (including Airbus Military), (2) Eurocopter, (3) Astrium and (4) Defence & Security. The chart set out in “General Description of the Company and its Share Capital – 3.3.6 Simplified Group Structure Chart” illustrates the allocation of activities among these four Divisions.

Airbus

Airbus is one of the world's leading aircraft suppliers, with a mission to provide the aircraft best suited to the market's needs and to support these aircraft with the highest quality of service. The Airbus commercial product line comprises a full range of aircraft models, from the 107-seat single aisle A318 aircraft to the 525-seat A380 – the largest civil aircraft in service worldwide.

In 2009, Airbus also integrated the former Military Transport Aircraft Division (the “**MTA Division**”) as a new Airbus business unit under the name “Airbus Military”, in order to manage all military aircraft activities, including integrated development of the A400M programme.

Airbus recorded revenues of €28.1 billion in 2009 – including revenues of €2.2 billion at Airbus Military – representing 65.5% of EADS' total revenues.

Airbus Commercial

Since it was founded in 1970 and up to the end of 2009, Airbus has received orders for 9,486 commercial aircraft from approximately 316 customers around the world. With 498 aircraft deliveries in 2009 (483 in 2008), Airbus was for the seventh consecutive year the largest supplier of commercial aircraft in the world. Airbus received 310 gross orders in 2009 (compared to 900 gross orders in 2008), or 54% of the worldwide market share of aircraft beyond 100 seats. After accounting for cancellations, net order intake for 2009 was 271 aircraft (compared to 777 aircraft in 2008). As of 31 December 2009, Airbus' backlog of commercial orders was 3,488 aircraft, representing approximately 82% of total EADS worldwide backlog. See “– 1.1.2 Airbus— Airbus Commercial”.

Airbus Military (former MTA division)

Airbus Military produces and sells special mission aircraft, which are derived from existing aircraft platforms and are dedicated to specialised military and security tasks such as in-flight refuelling capabilities, maritime surveillance and antisubmarine warfare. Airbus Military also manufactures and sells medium and light military transport aircraft and is responsible for the European heavy military transport A400M project. See “– 1.1.2 Airbus — Airbus Military”.

Eurocopter

Eurocopter is a global leader in the civil and military helicopter market, offering one of the most complete and modern ranges of helicopters and related services. With approximately 2,800 operators worldwide, this product range currently includes light single-engine, light twin-engine, medium and heavy helicopters which are adaptable to different mission types based on customer needs. In 2009, Eurocopter recorded revenues of €4.6 billion, representing 10.7% of EADS' total revenues. See “– 1.1.3 Eurocopter”.

Astrium

Astrium designs, develops and manufactures satellites, orbital infrastructures and launcher systems and provides space services. It is the third largest space systems manufacturing company in the world after Boeing and Lockheed Martin and the leading European supplier of satellites, orbital infrastructures, launchers and associated services. Astrium has three main Business Units: Astrium Satellites, Astrium Space Transportation and Astrium Services. These include the provision of launch services through Astrium's shareholdings in Ariespace (Ariane 5 launcher), Starsem (Soyuz launcher) and Eurockot (Rockot launcher), as well as services related to telecommunications and earth observation satellites through wholly or majority owned subsidiaries such as Paradigm Secure Communications, Infoterra and Spot Image. In 2009, Astrium recorded revenues of €4.8 billion, representing 11.2% of EADS' total revenues. See “– 1.1.4 Astrium”.

Defence & Security

The DS Division serves as the main pillar of EADS' defence and security activities. By combining its Defence and Communications Systems, Defence Electronics, Military Air Systems and missile systems (consisting of EADS' 37.5% stake in MBDA) Business Units within one Division, EADS has streamlined its defence and security business to better meet the needs of customers that require integrated defence and

security solutions. In 2009, the DS Division recorded revenues of €5.4 billion, representing 12.5% of EADS' total revenues. See “— 1.1.5 Defence & Security”.

Investments

Among its significant investments, EADS holds a 46.3% stake in Dassault Aviation, a major participant in the world market for military jet aircraft and business jets. See “— 1.1.7 Investments”.

SUMMARY FINANCIAL AND OPERATING DATA

The following tables provide summary financial and operating data for EADS for the past three years.

Consolidated Revenues by Division for the years ended 31 December 2009, 2008 and 2007

	Year ended 31 December 2009		Year ended 31 December 2008		Year ended 31 December 2007	
	Amount in €bn	In percentage ⁽¹⁾	Amount in €bn	In percentage ⁽¹⁾	Amount in €bn	In percentage ⁽¹⁾
Airbus ⁽²⁾	28.1	65.6%	29.0	66.8%	25.2	63.9%
<i>Airbus Commercial</i>	26.4	61.6%	26.5	61.1%	-	-
<i>Airbus Military</i>	2.2	5.2%	2.8	6.4%	-	-
Military Transport Aircraft ⁽²⁾	-	-	-	-	1.1	2.9%
Eurocopter	4.6	10.7%	4.5	10.3%	4.2	10.5%
Astrium	4.8	11.2%	4.3	9.9%	3.6	9.0%
Defence & Security	5.3	12.5%	5.7 ⁽⁴⁾	13.0%	5.4	13.7%
Total divisional revenues	42.8	100%	43.5	100%	39.5	100%
Other Businesses ⁽³⁾	1.1		1.3		1.4	
HQ/Consolidation ⁽⁵⁾	(1.1)		(1.5)		(1.8)	
Total	42.8		43.3		39.1	

(1) Before "Other Businesses" and "Headquarters/Consolidation".

(2) Following integration of Airbus Military into Airbus, Airbus reports in two segments as of 2009: Airbus Commercial and Airbus Military. The Airbus Commercial perimeter includes EFW and the completed aerostructures reorganisation but now excludes the A400M. Airbus Military includes the former MTA Division as well as all A400M activity. Eliminations between Airbus Commercial and Airbus Military are treated at the Airbus Division level. Figures for 2008 (but not 2007) have been restated accordingly, except for the Augsburg site transferred from the DS Division. See "Management's Discussion and Analysis of Financial Condition and Results of Operations —2.1.2 Overview".

(3) As of 2009, the composition of "Other Businesses" differs compared to 2008. Since EADS currently holds only a minority stake in Socata, this unit is now consolidated at equity within EADS' accounts. Also as of 2009, EADS EFW is consolidated within Airbus Commercial. Therefore, "Other Businesses" in 2009 consists of ATR, EADS Sogerma, EADS North America and 30% of Socata at equity. Figures for 2008 (but not for 2007) have been adjusted to reflect the consolidation of EADS EFW within Airbus Commercial. See "Management's Discussion and Analysis of Financial Condition and Results of Operations —2.1.2 Overview".

(4) Augsburg site's revenues are included in the DS division in 2008 and amounted to € 438 million. As of 2009, the Augsburg site is consolidated within Airbus Commercial. See "Management's Discussion and Analysis of Financial Condition and Results of Operations —2.1.2 Overview".

(5) HQ/Consolidation includes, in particular, adjustments and eliminations for intercompany transactions.

Consolidated Revenues by Geographical Area for the years ended 31 December 2009, 2008 and 2007

	Year ended 31 December 2009		Year ended 31 December 2008		Year ended 31 December 2007

RELATIONSHIP BETWEEN EADS N.V. AND THE GROUP

EADS N.V. itself does not engage in the core aerospace, defence or space business of its Group but coordinates related businesses, sets and controls objectives and approves major decisions for its Group. As the parent company, EADS N.V. conducts activities which are essential to the Group activities and which are an integral part of the overall management of the Group. In particular, finance activities pursued by EADS N.V. are in support of the business activities and strategy of the Group. In connection therewith, EADS N.V. provides or procures the provision of services to the subsidiaries of the Group. General

management service agreements have been put in place with the subsidiaries and services are invoiced on a cost plus basis.

For management purposes, EADS N.V. acts through its Board of Directors, Executive Committee, and Chief Executive Officer in accordance with its corporate rules and procedures detailed in "Corporate Governance".

Within the framework defined by EADS, each Division, Business Unit and subsidiary is vested with full entrepreneurial responsibility.

1.1.2 Airbus

Airbus is one of the world's leading aircraft suppliers, with a mission to provide the aircraft best suited to the market's needs and to support these aircraft with the highest quality of service. The Airbus commercial product line comprises a full range of aircraft models, from the 107-seat single-aisle A318 aircraft to the 525-seat A380 – the largest civil aircraft in service worldwide.

In 2009, Airbus also integrated the former MTA division as a new Airbus Business Unit under the name "Airbus Military", in order to manage all military aircraft activities, including integrated development of the A400M programme. This integration seeks to make the organisation and management of military programmes more efficient through clear and unified command lines. A better allocation of industrial and engineering resources is also one of the crucial goals of this integration. For further information related to Airbus Military, see "—Airbus Military" below.

In 2009, Airbus recorded revenues of €28.1 billion – including revenues of €2.2 billion at Airbus Military – representing 65.5% of EADS' total revenues.

AIRBUS COMMERCIAL

Introduction and Overview

Since it was founded in 1970 and up to the end of 2009, Airbus has received orders for 9,486 commercial aircraft from approximately 316 customers around the world. With 498 aircraft deliveries in 2009 (483 in 2008), Airbus was for the seventh consecutive year the largest supplier of commercial aircraft in the world. Airbus received 310 gross orders in 2009 (compared to 900 gross orders in 2008), or 54% of the worldwide market share of aircraft beyond 100 seats. After accounting for cancellations, net order intake for 2009 was 271 aircraft (compared to

777 aircraft in 2008). As of 31 December 2009, Airbus' backlog of commercial orders was 3,488 aircraft, representing approximately 82% of total EADS worldwide backlog.

Strategy

Airbus' primary goal is to deliver strong results in a sustained manner, while commanding between 40% and 60% of the worldwide commercial aircraft market over the long-term and expanding its customer services offering. To achieve this goal, Airbus is actively:

Building a leaner, more fully integrated company

In order to address the challenges posed by persistent US dollar weakness, increased competitive pressures and the financial burden related to the A380 and A400M delays, and to meet its future investment needs, Airbus launched a four-year restructuring programme at the beginning of 2007 referred to as Power8. As part of Power8, Airbus management is seeking to implement strong cost reduction and cash generating efforts with the goal of achieving EBIT* contributions of €2.1 billion from 2010 onwards against the projected cost base and an additional €5 billion of cumulative cash flow from 2007 to 2010. Savings realised pursuant to Power8 provided gross cost savings of €2 billion in 2009 compared to the projected cost baseline. See "Management's Discussion and Analysis of Financial Condition and Results of Operations".

In addition, a further cost savings programme referred to as "Power8 Plus" was launched in September 2008, with the goal of achieving gross annual savings of €650 million against the projected cost base beginning in 2011-2012. Airbus management intends to achieve the Power8 Plus objectives by extending the Power8 initiatives up to 2012 (€350 million) and through further globalisation of engineering and manufacturing work (€300 million).

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

Back to Contents

Developing the most comprehensive line of products in response to customer needs

Airbus continuously seeks to develop and deliver new products to meet customers' evolving needs. In this regard, Airbus is currently pursuing (i) implementation of the current A380 delivery schedule, (ii) the development of the new A350 XWB family of highly advanced medium capacity long-range aircraft, (iii) the gradual expansion of relevant freighter applications across the range of Airbus aircraft with the A330-200F and the A320 passenger-to-freighter, (iv) the continuous improvement of existing models' competitive edge in their respective markets, (v) the entry into the military business through the A400M or the development of military derivatives products such as the A330 MRTT, and (vi) research on the development of new aircraft in the short and medium range sector.

Focusing on key geographic markets

Airbus is seeking to expand its global presence and to increase its market share in key emerging markets such as China, Russia and India. As part of this strategy, Airbus is developing a number of international industrial partnerships and is building strategic relationships with strong industry partners. For example, Airbus signed a contract in 2009 with VSMPO-AVISMA Corporation, the Russian titanium manufacturer, which covers the supply of titanium and die forging parts for all existing Airbus aircraft, including new programmes such as the A350XWB.

Expanding its customer services offering

Airbus seeks to remain at the forefront of its industry by expanding its customer services offering to meet customers' evolving needs. As a result, Airbus has designed a comprehensive portfolio of services based on an "à la carte" approach whereby customers can select the products and services they need according to their own business model and outsourcing policy. This innovative approach helps Airbus operators to significantly reduce their operating costs, increase their aircraft availability and enhance the quality of their operations.

Market

Cyclicality and Market Drivers

The main factors affecting the commercial aircraft market include passenger demand for air travel, cargo activity, economic growth cycles, national and international regulation (and deregulation), the rate of replacement and obsolescence of existing fleets and the availability of aircraft financing sources. The performance, competitive posture and strategy of aircraft manufacturers, airlines, cargo operators and leasing companies as well as wars, political unrest, pandemics and extraordinary events may also precipitate changes in demand and lead to short-term market imbalances.

In recent years, China and India have emerged as significant new aircraft markets. According to internal estimates, they are expected to constitute the second and fifth most important

markets for aircraft deliveries respectively, in the next twenty years. As a result, Airbus has sought to strengthen its commercial and industrial ties in these countries.

The no-frills/low-cost carriers also constitute a significant sector, and are expected to continue growing around the world, particularly in Asia. Airbus single aisle aircraft continue to be a popular choice for these carriers. As some of these carriers begin testing the market with new long-range operations, their demand for Airbus' range of twin aisle aircraft may also increase.

Overall Growth. The long-term market for passenger aircraft depends primarily on passenger demand for air travel, which is itself primarily driven by economic or GDP growth, fare levels and demographic growth. Measured in revenue passenger kilometres, air travel increased every year from 1967 to 2000, except for 1991 due to the Gulf War, resulting in an average annual growth rate of 7.9% for the period. Demand for air transportation also proved resilient in the years following 2001, when successive shocks, including 9/11 and SARS in Asia, dampened demand. Nevertheless, the market quickly recovered.

More recently, the financial crisis and global economic difficulties witnessed at the end of 2008 and into 2009 resulted in only the third period of negative traffic growth during the jet age, and a cyclical downturn for airlines in terms of traffic (both passenger and cargo), yields and profitability. By the end of 2009 however, traffic had begun to recover with a number of industry participants, including the International Civil Aviation Organization (ICAO), forecasting a return to positive growth in 2010 and 2011.

Beyond the near-term market uncertainties and based on internal estimates, Airbus believes that air travel remains a growth business and will grow at 4.7% per annum during the period 2009-2028. Airbus therefore expects passenger traffic, as measured in revenue passenger kilometres, to more than double in the next twenty years.

Cyclicality. Despite the expected overall long-term growth in air travel, the market for commercial aircraft has proven to be cyclical, due to the volatility of airline profitability, cyclicality of the world economy and occasional unforeseen events which can further depress demand for air travel, such as the spread of H1N1 flu. Accordingly, following the peak in new orders reached in 2007, Airbus recorded significantly fewer new orders in 2008 and 2009 as a result of the cyclical downturn, with conditions expected to remain challenging in 2010.

When cyclical downturns have occurred in the past, aircraft manufacturers have typically experienced decreases in aircraft orders and have made fewer deliveries, with some customers seeking to postpone or cancel their existing orders. In the past this has generally been followed by a period of sustained new order and delivery activity. As with any macro-economic

development, however, it is difficult to predict how the current downturn and the next cycle will develop.

Regulation/Deregulation. National and international regulation (and deregulation) of international air services and major domestic air travel markets affect demand for passenger aircraft as well. In 1978, the United States deregulated its domestic air transportation system, followed by Europe in 1985. The recently negotiated “Open Skies Agreement” between the United States and Europe, which became effective in March 2008, allows any European or US airline to fly any route between any city in the EU and any city in the US. Other regions and countries are also progressively deregulating, particularly in Asia. This trend is expected to continue, facilitating and in some cases driving demand. In addition to providing greater market access (which may have formerly been limited), deregulation may allow for the creation and growth of new airlines or new airline models, as has been the case with the no-frills/low-cost airline model, which has increased in importance throughout major domestic and intra regional markets since deregulation (e.g., in the US and Europe).

Airline Network Development: “Hub” and “Point-to-Point” Networks. Following deregulation, major airlines have sought to tailor their route networks and fleets to continuing changes in customer demand. Accordingly, where origin and destination demand prove sufficiently strong, airlines often employ direct, or “point-to-point” route services. However, where demand between two destinations proves insufficient, airlines have developed highly efficient “hub and spoke” systems, which provide passengers with access to a far greater number of air travel destinations through one or more flight connections.

The chosen system of route networks in turn affects aircraft demand, as hubs permit fleet standardisation around both smaller aircraft types for the short, high frequency and lower density routes that feed the hubs (between hubs and spokes) and larger aircraft types for the longer and higher density routes between hubs (hub-to-hub), themselves large point-to-point markets. As deregulation has led airlines to diversify their route network strategies, it has at the same time therefore encouraged the development of a wider range of aircraft in order to implement such strategies.

Airbus, like others in the industry, believes that route networks will continue to grow through expansion of capacity on existing routes and through the introduction of new routes, which will largely be typified by having a major hub city at least at one end of the route. These new route markets are expected to be well served by Airbus’ latest product offering, the A350 XWB, which has been designed with them in mind. The A380, now in revenue service, is designed primarily to meet the significant demand between the major hub cities, very often also the major centres of population such as London, Paris, New York and Beijing for example. Airbus has identified 32 such cities in its market analysis. Airbus believes that it is well positioned to meet

current and future market requirements given its complete family of products, from the 107-seat A318 to the 525-seat A380.

Alliances. The development of world airline alliances has reinforced the pattern of airline network development described above. According to data from Ascend, a UK-based aviation industry consultancy, more than one third of the world’s jetliner seats being flown today are operated by just 15 airlines as of January 2010. In the 1990s, the major airlines began to enter into alliances that gave each alliance member access to the other alliance members’ hubs and routings, allowing airlines to concentrate their hub investments while extending their product offering and market access. Airlines have also begun to explore different merger possibilities in recent years. Examples include the merger of Air France and KLM, US Airways and America West and Delta and Northwest, with talks between other airlines currently ongoing.

Governmental Funding. A 1992 bilateral agreement between the EU and the US provided for ceilings on reimbursable launch investments (typically used by European governments) of 33% of the total development costs of new large civil aircraft programmes. It also set a ceiling at 3% of industry revenues for indirect support in relation to the development or production of large civil aircraft (typically the Department of Defense and National Aeronautics and Space Administration (“NASA”) mechanisms used in the US). This bilateral agreement provided a level playing field for government support, reflecting the needs of both Europe and the US.

However, the unilateral withdrawal from the 1992 agreement by the US government in late 2004 eventually led to formal claims and counterclaims being made by the US and the EU, respectively, with the WTO. The EU and the US have conducted negotiations to seek a formal settlement of the issues pending before the WTO. In the absence of an agreement between the parties, the WTO tribunal hearing the dispute will issue reports evaluating the legality of any governmental funding provided to Boeing and Airbus. These reports and any associated recommendations will be addressed to the WTO members (i.e. national governments), and not to Boeing, Airbus or EADS directly.

Market Structure and Competition

Market Segments. According to a study conducted by Airbus, a total of 14,016 aircraft with more than 100 seats were in service with airlines worldwide at the beginning of 2009 (as compared to 13,284 aircraft at the end of 2007). Currently, Airbus competes in each of the three principal market segments for aircraft with more than 100 seats.

“Single aisle” aircraft, such as the A320 family, have 100-210 seats, typically configured with two triple seats per row divided by one aisle, and are used principally for short-range and medium-range routes.

“Twin aisle” or “wide body” aircraft, such as the A330/A340/A350 XWB families, have a wider fuselage with more than 210 seats, typically configured with eight seats per row and with two aisles. The A330/A340/A350 XWB families are capable of serving all short to long-range markets, with the A340-500/600 designed for ultra-long-range operations in particular.

“Very large aircraft”, such as the A380 family, are designed to carry more than 400 passengers, non-stop, over very long-range routes with superior comfort standards and with significant cost-per-seat benefits to airlines. Freight aircraft, which form a fourth, related segment, are often converted ex-passenger aircraft. See “— 1.1.6 Other Businesses — Aerostructures, Aircraft Conversion and Floor Panels — EFW”.

Airbus also competes in the corporate, VIP business jet market with the ACJ, an A319-based Corporate Jetliner, and the A318 Elite. It has also recently sold the A320, A340 and A380 to serve the business jet market in private, corporate shuttle and in government/VIP roles.

Geographic differences. The high proportion of single aisle aircraft in use in both North America and Europe reflects the predominance of domestic short-range and medium-range flights, particularly in North America due to the development of hubs following deregulation. In comparison with North America and Europe, the Asia-Pacific region uses a greater proportion of twin aisle aircraft, as populations tend to be more concentrated in fewer large urban centres. The tendency towards use of twin aisle aircraft is also reinforced by the fact that many of the region’s major airports limit the number of flights, due either to environmental concerns or to infrastructure constraints that limit the ability to increase flight frequency. These constraints necessitate higher average aircraft seating capacity per flight. However, Airbus believes that demand for single aisle aircraft in Asia will grow over the next 20 years, particularly as domestic markets in China and India continue to develop. This is expected to occur at the same time that Asian demand for larger/long-range aircraft continues to increase.

Competition. Airbus has been operating in a duopoly since Lockheed’s withdrawal from the market in 1986 and Boeing’s acquisition of McDonnell Douglas in 1997. As a result, the market for passenger aircraft of more than 100 seats is now effectively divided between Airbus and Boeing. According to the manufacturers’ published figures, in 2009 Airbus and Boeing, respectively, accounted for 51% and 49% of total deliveries, 54% and 46% of total gross orders, and 51% and 49% of the total year-end backlog.

Nevertheless, the high technology and high value nature of the business makes aircraft manufacturing an attractive industry in which to participate, and besides Boeing, Airbus faces aggressive international competitors who are intent on increasing their

market share. Regional jet makers Embraer and Bombardier, coming from the less than 100-seat commercial aircraft market, continue to develop larger and more capable airplanes (such as the new 100- to 149-seat C-Series launched by Bombardier). Additionally, other competitors from Russia, China, and Japan are likely to enter the 70- to 150-seat aircraft market over the next few years. This market environment has resulted in intense pressures on pricing and other competitive factors.

Customers

As of 31 December 2009, Airbus had 316 customers, 5,998 Airbus aircraft had been delivered to operators worldwide since the creation of Airbus, and 3,488 aircraft were on order. The table below shows Airbus’ largest commitments in terms of total gross firm orders by customer for the year 2009.

Customer	Firm Orders*
Undisclosed Customer	52
Wizz Air	50
Turkish Airlines	34
Lan Airlines	30
Qatar Airways	24
China Eastern	16
Vietnam Airlines	16

* Options are not included in orders booked or year-end backlog.

Products and Services

The Family Concept — Commonality across the Fleet

Airbus’ aircraft families promote fleet commonality. This philosophy takes a central aircraft and tailors it to create derivatives to meet the needs of specific market segments. This approach means that all new-generation Airbus aircraft share the same cockpit design, fly-by-wire controls and handling characteristics. Pilots can transfer among any aircraft within the Airbus family with minimal additional training. Cross-crew qualification (CCQ) across families of aircraft provides airlines with significant operational flexibility. In addition, the emphasis on fleet commonality permits aircraft operators to realise significant cost savings in crew training, spare parts, maintenance and aircraft scheduling. The extent of cockpit commonality within and across families of aircraft is a unique feature of Airbus that, in management’s opinion, constitutes a sustainable competitive advantage.

In addition, technological innovation has been at the core of Airbus’ strategy since its creation. Each product in the Airbus family is intended to set new standards in areas crucial to airlines’ success, such as cabin comfort, cargo capacity performance, economic performance, environmental impact and operational commonality. Airbus innovations often provide distinct competitive advantages, with many becoming standard

in the aircraft industry. Key examples include fly-by-wire controls, aircraft commonality and the introduction of widebody twin-engine aircraft.

In 2009, for example, Airbus welcomed the latest steps towards the approval by ASTM International, one of the largest voluntary standards developing organisations in the world, for the use of a 50% synthetic jet fuel in commercial aviation. The Airbus Alternative Fuels roadmap estimates that some 30% of jet fuel used in 2030 could be sustainable biojet fuel if maturity of alternative high yield non-food feedstock occurs in the middle of the next decade.

A320 Family

Airbus' family of single aisle aircraft, based on the A320 (which entered service in 1988 following a development programme launched in 1984), includes the A318, A319 and A321 derivatives, as well as the A319-based Airbus Corporate Jetliner and A318 Elite business jet, which Airbus launched in 1997 and 2005, respectively. Each aircraft in the A320 family shares the same systems, cockpit, operating procedures and cross-section. The A320 family covers the market from 100 to 220 seats, flying routes up to 3,000 nm/5,700 km.

A320 Family Technical Features

Model*	Entry into service	Passenger capacity*	Maximum range (km)	Length (metres)	Wingspan (metres)
A318	2003	107	6,000	31.4	34.1
A319	1996	124	6,800	33.8	34.1
A320	1988	150	5,700	37.6	34.1
A321	1994	185	5,600	44.5	34.1

* Two-class layout.

A330/A340 Family

With approximately 1,435 aircraft sold and 1,025 currently in service, the A330/A340 family is Airbus' solution for regional, long-range and ultra long-range travel, designed to carry between 250 to 350 passengers. The A330/A340 family concept is unique: one airframe is powered by either two or four engines. The twin-engine A330 offers attractive economic performance for regional up to long-range routes, while the four-engine A340 can perform on the most demanding long-range and ultra long-range routes, including non-stop flights such as Los Angeles — Singapore.

The A330/A340 family is composed of six passenger versions. Each shares the same 222-inch fuselage cross-section, cockpit and other advanced features, delivering the commonality that encourages airlines to adopt the most efficient mix of aircraft

At 3.96 metres diameter, the A320 family has the widest fuselage cross-section of any competing single aisle aircraft. This provides a roomy passenger cabin, a high comfort level and a more spacious underfloor cargo volume than its competitors. The A320 family incorporates digital fly-by-wire controls, an ergonomic cockpit and a lightweight carbon fibre composite horizontal stabiliser. The use of composite material has also been extended to the vertical stabiliser. The A320 family's competitor is the Boeing 737 series.

With more than 6,528 aircraft sold and 4,063 currently in service, the A320 family has proven extremely popular with customers, offering high standards of cabin comfort, technology and economic performance. Its success with low-cost airlines in particular demonstrates the economic appeal of the A320 family.

In 2009, Airbus received 207 firm orders for the A320 family of aircraft, and delivered 402 to customers.

for their networks. The A330/A340 family offers high levels of passenger comfort as well as large under-floor cargo areas. The competitors of the A330/A340 family are the Boeing 767, 777 and 787 aircraft series.

In 2009, the new dedicated cargo variant of the successful A330 family, the A330-200F, conducted its first flight, with first deliveries targeted to begin in 2010. Well adapted to the current market dynamics of rising fuel prices and increased pressure on yields, the new A330-200F will offer cargo customers greater range, as well as the opportunity to increase services in low frequency long-range markets currently served with much larger aircraft, develop new routes and respond to market growth.

In 2009, Airbus received 38 firm orders for the A330/A340 family of aircraft, and delivered 86 to customers.

A330/A340 Family Technical Features

Model*	Entry into service	Passenger capacity*	Maximum range (km)	Length (metres)	Wingspan (metres)
A330-200	1998	253	12,500	59.0	60.3
A330-300	1994	295	10,500	63.7	60.3
A340-300	1992	295	13,700	63.7	60.3
A340-500	2002	313	16,700	67.8	63.6
A340-600	2002	380	14,600	75.3	63.6

* Three-class layout.

A380

The A380 is the most spacious passenger aircraft on the market, and represents Airbus' offering in the very large aircraft segment. Its cross-section provides flexible and innovative cabin space, allowing passengers to benefit from wider seats, wider aisles and more floor space, tailored to the needs of each airline. Seating 525 passengers in three classes and with a range of 8,000nm/15,000km, the A380 offers superior economic performance, lower fuel consumption, less noise and reduced emissions. The A380's main competitor is the 400-seat Boeing 747-8.

In 2009, Airbus received 4 firm orders for the A380, for a total of 202 firm orders from 17 customers at the end of the year. At the same time, Airbus delivered 10 A380 aircraft to customers in 2009 (compared to 12 in 2008). Airbus continues to face significant challenges as it seeks to ramp-up A380 production, and is currently targeting delivery of approximately 20 aircraft in 2010. See also "Management's Discussion and Analysis of Financial Condition and Results of Operations".

A380 Technical Features

Model*	Entry into service	Typical capacity*	Maximum range (km)	Length (metres)	Wingspan (metres)
A380-800	2007	525	15,000	73.0	79.8

* Three-class layout.

New Product Development

A350 XWB Family

At the end of 2006, Airbus launched the A350 XWB Family, a new extra-wide body medium capacity long-range family, which will accommodate between 270 to 350 passengers and is expected to enter service in 2013. The A350 XWB features A380 technology, a wider fuselage than that of competing new generation aircraft and a greater use of composite material. The A350 XWB's main competitor is the Boeing 787 aircraft series.

In January 2009, Airbus started construction work on the final assembly line for the A350 XWB. This factory will house the first stages of final assembly for the A350 XWB: the joining up of the fuselage and wings. Aircraft testing and cabin equipping will then be completed in the nearby A330/340 facility.

In 2009, Airbus received 22 firm orders for the A350 XWB Family of aircraft, for a total of 505 firm orders from 32 customers at the end of the year.

A350 XWB Family Technical Features

Model*	Entry into service	Passenger capacity*	Maximum range (km)	Length (metres)	Wingspan (metres)
A350-800	2014	270	15,800	61.0	64.0
A350-900	2013	314	15,000	67.3	64.0
A350-1000	2015	350	14,800	74.3	64.0

* Three-class layout.

A400M

For information related to the A400M programme, see “—Airbus Military” below.

Asset Management

The Airbus Asset Management division was established in 1994 to manage and re-market used aircraft acquired by Airbus, originally as a result of customer bankruptcies, and subsequently in the context of certain buy-back commitments. The division operates with a dedicated staff and manages a fleet comprised of Airbus aircraft across the range of models. Through its activities, the Asset Management division helps Airbus respond more efficiently to the medium and long-term fleet requirements of its customers.

Its key roles comprise commercial and risk management of the Airbus portfolio of used aircraft. Most of the aircraft are available to customers for cash sale, while some can only be offered on operating lease, depending on the financing attached to such aircraft. At the end of 2009, the Airbus Asset Management portfolio contained 10 aircraft (no change from 2008). The Asset Management division also provides a full range of support services, including assistance with entry into service, interior reconfiguration and maintenance checks.

Customer Finance

Airbus favours cash sales, and does not envisage customer financing as an area of business development. However, Airbus recognises the commercial need for manufacturers to assist customers in arranging financing of new aircraft purchases, and in certain cases to participate in financing those aircraft or the airline itself.

Extension of credit or assumption of exposure is subject to corporate oversight and monitoring, and follows strict standards of discipline and caution. Airbus' dedicated customer finance team has accumulated decades of expertise in aircraft finance. When Airbus finances a customer, the financed aircraft generally serve as collateral, with the engine manufacturer participating in the financing. These elements assist in reducing the risk borne by Airbus. Airbus' customer financing transactions are designed to facilitate subsequent sell-down of the exposure to the financial markets, third party lenders or lessors.

Airbus' financing exposure is counter-cyclical and Airbus was therefore able to conclude significant sell-down of its exposure in the 2005-2007 period. However, in light of the continuing volatility in the financial and credit markets, Airbus expects to increase the amount of financing it provides to customers in the future. Management believes, in light of its experience, that the level of provisioning protecting Airbus from default costs is adequate and consistent with standards and practice in the aircraft financing industry. See “Management's Discussion and Analysis of Financial Condition and Results of Operations”.

Customer Service

Airbus Customer Services provides a full range of support services to airlines so that they can operate their Airbus fleet safely, efficiently and on schedule. The Airbus Customer Services Directorate heads an engineering and technical support group (including a 24/7 assistance response centre), a flight operations support group, a technical documentation organisation, a worldwide network of training and spare parts support centres, customer support teams and field services teams that are based at customer airlines.

Complemented by offerings from selected partners, Airbus thereby aims to satisfy all of its customers' pre-delivery and in-service support and services requirements. Airbus Customer Services currently supports approximately 5,700 Airbus aircraft, ranging from the smallest short range A318 to the large double deck A380.

The development of services is particularly important in the area of integrated maintenance packages, where Airbus offers a suite of services, Flight Hours Services (FHS) and Tailored Support Package (TSP), to assist customers seeking to reduce their spare parts and maintenance investments. Several customers have already opted for this innovative way of operating their aircraft.

Recently, Airbus has launched several innovations in the area of customer services, such as AirStart, a consulting service specifically designed for new operators which offers broad expertise in flight operations, maintenance and engineering, material and logistics and training. Airbus has also established a comprehensive fuel efficiency service to optimise aircraft performance and identify fuel-efficient maintenance tasks. Improvements have also been made in repair engineering support through development of a new tool (Repair Manager) to allow better and faster response times to repair needs.

Production

Industrial Organisation

Each task in the building of Airbus aircraft (from design, definition and production to product or operational support) is allocated to a designated Centre of Excellence (“CoE”) according to its specialised expertise. In connection with the Power8 restructuring programme launched in 2007, Airbus underwent a major reorganisation and revised its CoEs to ensure that they were fully transnational. The current CoEs cover Fuselage/Cabin, Wing/Pylon and Empennage/Aft Fuselage as well as transversal CoE Industrial Processes & Aerostructures. The development of CoEs constitutes an essential feature of Airbus manufacturing.

The CoEs are overseen by Airbus' Head of Operations and his team, who are in charge of all industrial processes. This includes ensuring that harmonised and standardised processes, methods and tools are selected and implemented across the CoEs in order to increase efficiency and reduce costs.

3

4

5

Back to Contents

Programmes, which is responsible for the work of the final assembly lines including cabin definition and installation as well as overall management processes, works closely with the CoEs, to secure firm commitments from them on what is delivered to the final assembly lines.

The CoEs also maintain close links with core functions such as Engineering, Procurement, Quality, Human Resources and Customer Services to develop and manage skills, manage policies and ensure that Airbus employees share knowledge and ideas in a cross-functional way.

In 2008, EADS and Airbus completed the aerostructures reorganisation strategy initiated under Power8. This initiative combines the divestment of non-core activities and sites in order to establish a network of strong tier one suppliers, allowing Airbus to concentrate on its core business as an aircraft architect and integrator. Accordingly, GKN Aerospace acquired the Airbus wing component and sub-assembly manufacturing facility in Filton, UK, and Diehl/Thales acquired Airbus' site in Laupheim, Germany. Prior to this, the carve-out process for the former German Airbus sites in Nordenham and Varel and the former EADS site in Augsburg was also accomplished to create the new Premium AEROTEC GmbH. A similar process was undertaken in France, where Meaulte and St. Nazaire Ville are now the foundation of Aerolia S.A. Both Premium AEROTEC and Aerolia commenced full operations on 1 January 2009 under EADS ownership, and are well positioned to become major players on the global aerostructure market. Not only will all companies be significantly involved in the A350 XWB programme, they will also commit to the EADS/Airbus Power8 targets.

In 2009, further business transfer was performed as part of the Power8 "Reshape Industrial Footprint" process: Saint-Nazaire's hydraulic and cabin systems tubes and pipes business was transferred from Airbus to Aerolia on 1 October 2009 and the production of sheet metal detailed parts in Bremen was transferred from Airbus to Premium AEROTEC on 1 January 2010.

Engineering

Engineering innovation at Airbus is driven by Centres of Competence ("CoCs"), which provide functional design leadership for the complete aircraft and aircraft components as well as developing and researching technologies that can be applied to the next aircraft programme. The CoCs operate transnationally with engineers from the CoCs present at all 4 Airbus sites. Airbus engineers work on specific and non-specific aircraft designs to create solutions that meet airline customer needs.

An important part of the Airbus engineering organisation is the Architect and Integration centre, which ensures, together with a team of senior aircraft architects and the programme chief

engineers, that a consistent and multi-disciplinary approach is applied during aircraft development.

The Airbus Engineering testing centre gathers all major systems and integration laboratories as well as the flight test centre in order to have a common approach towards testing of the critical aircraft systems.

Over the course of the last seven years, Airbus has opened engineering centres in Wichita (Kansas, US), in Mobile (Alabama, US), in Moscow (Russia), in Bangalore (India) and in Beijing (China), through which it has gained access to a large pool of experienced aerospace engineers.

In 2009, Airbus Engineering advanced the A350 design in terms of specific and component designs and large-scale structural demonstrators, further fine-tuning of aerodynamic performance, maturing of systems architecture design, major system supplier selection and propulsion integration studies. Airbus Engineering also made a major contribution to the successful first flight in 2009 of the A330-200F and the A400M.

Manufacturing Facilities and Production Flow

The CoEs are responsible for the design and manufacturing of fully equipped and tested deliverables, ranging from specific parts to major aircraft components. Aircraft components are transferred between the network of sites and the final assembly lines using Airbus' five custom built A300-600 "Beluga" Super Transporters. To support the A380 production flow, Airbus has integrated road, river and sea transport. Typical lead times between customer definition freeze and industrial delivery for single aisle aircraft are 7-8 months, and 9-12 months for long-range twin aisle aircraft.

Targeted Deliveries in 2010

Airbus delivered 498 aircraft in 2009 (compared to 483 in 2008) and is targeting delivery of up to the same number of aircraft in 2010. Any major production or market disruption or economic downturn could lead to revision of these figures.

AIRBUS MILITARY

Introduction and Overview

Airbus Military produces and sells special mission aircraft, which are derived from existing aircraft platforms and are dedicated to specialised military and security tasks such as in-flight refuelling capabilities, maritime surveillance and antisubmarine warfare. Airbus Military also manufactures and sells medium and light military transport aircraft and is responsible for the European heavy military transport A400M project.

In 2009, Airbus Military recorded revenues of €2.2 billion.

Strategy

Airbus Military's strategy is to further develop its core businesses and increase market share by leveraging EADS' technology know-how, while at the same time enhancing profitability. Accordingly, Airbus Military is actively:

Strengthening its position as a major supplier of special mission aircraft

As a supplier of special mission aircraft, Airbus Military satisfies customers' mission-specific requirements by relying on its own specialised technologies (refuelling boom system, fully integrated tactical system ("FITS"), maritime patrol solutions) as well as those of EADS' wide range of platforms and systems. Airbus Military will seek further consolidation of its position in this market in the future, in particular through its offering of the A330 MRTT, which is currently under final certification and qualification tests.

Maintaining its leadership for military transport aircraft

Airbus Military is a global leader in the market segments for medium and light military transport aircraft. Through the addition of the A400M heavy military transport aircraft—which successfully performed its maiden flight during 2009—Airbus Military offers a full range of tactical military transport aircraft capable of covering all mission needs.

Market

Special Mission Aircraft

Special mission aircraft are derived from existing aircraft platforms and adapted to particular missions, in general for military and security customers. Adaptations to the platform require thorough knowledge of the basic airframe, which generally only the aircraft manufacturer possesses. The skills necessary for the overall systems integration into the aircraft are extensive and the number of participants in the world market is very limited.

Moreover, modern defence and warfare require independent access to complex forms of information in various operational theatres, and customers are therefore increasingly demanding comprehensive systems tailored to their specific operational requirements. This development and European defence and security needs are expected to boost demand for special mission aircraft in the near term. Airbus Military believes that it is well positioned in this market based on the range of customised solutions that it offers.

Military Transport Aircraft

Governments and national organisations constitute the main customers in the market for military transport aircraft. This market consists of three segments: (i) light transport aircraft, with a payload of one to three tonnes, (ii) medium transport aircraft, with a payload of four to fourteen tonnes, and (iii) heavy

transport aircraft, with a payload of fifteen tonnes or more. According to an analysis by the Teal Group – an independent aerospace and defence industry consulting firm – the global market for military transport aircraft during the next ten years is expected to amount to approximately US\$ 52 billion.

Heavy Military Transport. This market segment has been driven historically by US policy and budget decisions, and therefore has been dominated by US manufacturers, in particular Lockheed Martin's C-130 Hercules. The A400M represents Airbus Military's entry into this market, at a time when the US and Europe are expected to begin upgrading and replacing their existing fleets. In the upper part of the segment, the A400M could compete against the C-17 from Boeing.

Medium Military Transport. Management believes that this market will continue to grow at a moderate rate. Airbus Military aircraft are leaders in this segment, specifically the CN-235 and C-295 aircraft, which have a combined average market share of 56% over the last ten years according to internal estimates. Their competitors are the C-27J Spartan, manufactured by the joint venture LMATTS (Lockheed Martin Alenia Tactical Transport System), and the An-32, manufactured by Antonov.

Light Military Transport. This is a mature market that is diminishing in size as countries develop economically and are able to afford medium military transport aircraft. The C-212 has historically led this market segment, with an average market share of 27% over the last ten years according to internal estimates. The C-212's main competitor is the M-28, manufactured by Polskie Zakłady Lotnice, Mielec.

Products and Services

Special Mission Aircraft

Multi-Role Tanker Transport — A330 MRTT. The A330 MRTT, a derivative of the successful Airbus A330/A340 family, is the world's leading air-to-air refuelling aircraft. Its huge basic fuel capacity means that no auxiliary tanks are needed to give air-to-air refuelling performance that far exceeds its nearest competitors. Fuel is passed through an innovative fly-by-wire refuelling boom that delivers a larger fuel flow rate, refuelling envelope and better control than other systems available on the market. As the A330 MRTT does not need auxiliary fuel tanks, the entire cargo bay is available for freight, with the possibility of incorporating standard LD3 or LD6 containers, military pallets and/or any other type of load device in use today.

The A330 MRTT is being considered for multi-role tanker transport mission requirements throughout the world. To date, Airbus Military has won contracts for the A330 MRTT with the governments of Australia, Saudi Arabia (including one repeat order), the UAE and the United Kingdom, with a total backlog of 28 aircraft at the end of 2009. This includes a 27-year contract with the UK Ministry of Defence ("MoD") in connection

with the latter's Future Strategic Tanker Aircraft ("FSTA") programme. The FSTA programme calls for the provision of a fleet of 14 new tanker aircraft (based on the latest generation Airbus A330-200) to enter service from 2011, replacing the previous fleet of VC-10 and Tristar refuelling aircraft. The contract also includes provision for all necessary infrastructure, training, maintenance, flight management, fleet management and ground services to enable the Royal Air Force to fly air-to-air refuelling and transport missions worldwide.

In the US, the Air Force has also been conducting a programme to replace its ageing fleet of air-to-air refuelling aircraft. In early 2008, the US Air Force announced that it had awarded the initial contract to Northrop Grumman (as prime contractor), with which EADS had teamed up. Following a challenge by Boeing of this contract award that was upheld by the Government Accountability Office, the US Department of Defense published a new request for proposal at the end of February 2010, on which the Northrop Grumman/EADS team decided not to bid. See "—1.2 Recent Developments".

Finally, Airbus Military has led a technological programme aimed at developing a new "air-to-air refuelling boom system" ("ARBS"). The new ARBS is designed to provide a refuelling performance that is substantially faster than that of the competition — a considerable advantage given the vulnerability of the aircraft during the refuelling procedure. The industrial planning for serial production of the new ARBS was launched in 2009. The ARBS has been successfully flight-tested on the A330 MRTT with both fast jet (F-16) and large (E3 AWACS) types of receivers as part of the A330 MRTT certification/qualification process for the Royal Australian Air Force.

Maritime Patrol Aircraft. Airbus Military provides different solutions ranging from maritime surveillance to anti-submarine warfare missions through aircraft based on the C-212, CN-235, C-295 or P-3 Orion platforms. Airbus Military aircraft, specifically the CN-235 and C-295, have a combined average market share of 38% over the last ten years according to internal estimates. Their main competitors are maritime patrol versions of the Bombardier Dash-8 Q200/Q300 and Alenia ATR 42/72.

Airbus Military also develops FITS, which is the core of the mission system installed on these maritime patrol platforms. FITS is a new generation system that enhances tactical awareness and facilitates decision-making processes and operations within a network-centric environment.

In 2009, the Colombian Navy ordered one CN-235 aircraft for maritime patrol missions. In terms of deliveries, Airbus Military delivered three maritime patrol aircraft in 2009 (one CN-235 for the US Coast Guard, one C-295 for Chile and one C-295 for Portugal). The conversion of the remaining two CN-235 aircraft on behalf of the Spanish MoD was also finished and the aircraft delivered in 2009.

Military Transport Aircraft

Airbus A400M. The A400M is designed to meet the future large aircraft requirements of seven European nations seeking to replace their ageing C-130 Hercules and C-160 Transall fleets. In addition to fast and flexible intercontinental force projection, the new aircraft is intended to respond to changing geopolitical requirements (including increased humanitarian and peacekeeping missions).

In May 2003, OCCAR signed a contract with Airbus Military to order 180 A400M aircraft on behalf of seven nations: Germany committed to 60 aircraft, France to 50, Spain to 27, the UK to 25, Turkey to 10 and Belgium to 8 (including one on behalf of Luxembourg). In addition to the initial 180 aircraft, export orders (4 for Malaysia) bring the total order book for the A400M aircraft to 184 at the end of 2009 (following the cancellation by South Africa of its order for eight aircraft).

In September 2008, EADS announced an undefined delay of the first flight of the A400M, mainly due to the unavailability of the propulsion system and beyond that – but not first flight critical – due to the fact that other suppliers of mission critical systems and of systems integration were severely struggling with the challenging technical requirements of this aircraft.

In January 2009, EADS announced that it had proposed a new programme approach for the A400M to the launch customer nations, through OCCAR, with the aim to find an appropriate way forward for this programme. Discussions involved proposed changes to the programme schedule as well as other areas of the original contract, including in particular certain technical characteristics of this military aircraft. During this time, the first flight of the A400M occurred in December 2009.

On 5 March 2010, EADS announced that it and the launch customer nations had come to an agreement in principle regarding the future of the A400M programme. See "—1.2 Recent Developments", "Management's Discussion and Analysis of Financial Condition and Results of Operations" and "Notes to the Consolidated Financial Statements (IFRS) — Note 3: Accounting for the A400M programme" for further detail.

CN-235 — Medium Military Transport. The first version in the CN-235 family, the S-10, entered into service in 1987. The latest one, the Series 300, is a new-generation, twin turboprop, pressurised aircraft. The CN-235-300 is capable of transporting a payload of up to 6,000 kg, accommodating (i) 36 paratroopers, (ii) 18 stretchers plus three medical attendants, (iii) four of the most widely used types of freight pallets, or (iv) oversized loads such as aircraft engines or helicopter blades. Paratrooper operations can be performed through the two lateral doors in the rear part of the aircraft or over the rear ramp. Variants of the CN-235-300 are used for other missions such as maritime patrol or pollution control, among others.

C-295 — Medium Military Transport. Certified in 1999, the C-295 has a basic configuration similar to the CN-235, with a stretched cabin to airlift a 50% heavier payload at greater speed over longer distances. The C-295 is equipped with integrated avionics incorporating digital cockpit displays and a flight management system, enabling tactical navigation, planning and the integration of signals from several sensors.

Both the CN-235 and the C-295 have been designed as complements or replacements for the ageing C-130 Hercules, accomplishing most of their missions at a much lower operating cost.

In 2009, Airbus Military signed a new contract with Botswana for the supply of one additional CN-235 aircraft, as well as contracts with the Czech Republic and Mexico for four and seven C-295s, respectively. During 2009, Airbus Military delivered two CN-235s to Botswana, one to L3, a US company, as well as the first C-295 aircraft to the Czech Republic. In addition, four C-295 aircraft were delivered to Portugal, two C-295 each to Mexico and Brazil and one C-295 to Colombia.

C-212 — Light Military Transport. The C-212 was designed as a simple and reliable unpressurised aircraft able to operate from makeshift airstrips in order to perform both civilian and military tasks. The first version, the S-100, entered into service in 1974. The latest version, the S-400, incorporates several improvements such as new avionics and engines for enhanced performance in hot climates and high altitudes, as well as improved short take-off and landing performance. In addition, the C-212's rear cargo door provides multi-mission capability with a configuration that can be changed quickly and easily, thereby reducing turnaround times. In 2009, a contract was signed with Thailand for two C-212 aircraft.

Production

In 2009, a new final assembly line for light and medium aircraft opened at the San Pablo factory in Seville (southern Spain). The new facilities – which are shared with the A400M – have a surface area of 600,000 m² (of which 170,000 m² are constructed surface area), which constitutes a doubling of the previous operational capacity. On 11 June 2009, the old assembly line was transferred to these new facilities at San Pablo airport.

1.1.3 Eurocopter

INTRODUCTION AND OVERVIEW

Eurocopter is a global leader in the civil and military helicopter market, offering one of the most complete and modern ranges of helicopters and related services. With approximately 2,800 operators worldwide, this product range currently includes light single-engine, light twin-engine, medium and heavy helicopters which are adaptable to different mission types based on customer needs. In 2009, Eurocopter recorded revenues of €4.6 billion, representing 10.7% of EADS' total revenues.

With 558 helicopter deliveries in 2009 (588 in 2008), Eurocopter met its business and delivery objectives for the year. Due to the global economic downturn, order bookings suffered a decline in 2009 in terms of units sold, but not in value as a result of growth in the military market. After accounting for cancellations, net order intake for 2009 was 344 aircraft (compared to 715 in 2008). With approximately 450 gross orders in 2009, Eurocopter maintained its leadership in the civil and parapublic market. At 31 December 2009, Eurocopter's backlog of orders was 1,303 aircraft.

STRATEGY

Eurocopter aims at strengthening its market position by further balancing its portfolio of military and civil business, and increasing its share of revenue generated by services activities in order to achieve sustained profitable growth. To this end, Eurocopter is actively:

Pursuing internal growth and international expansion

Management is focused on strengthening Eurocopter's position in the markets where it has traditionally held a strong position, such as the US civil and homeland security market, and further developing its presence in potential growth markets such as China, India, South America and Eastern Europe. Part of its strategy relies on the offering of leading edge technology products in all its markets, such as the major contract signed with Brazil for 50 EC725 helicopters and previously the first successful sale of large quantities of helicopter systems to the US Army by a non-US manufacturer. Eurocopter will seek to pursue this expansion through both organic and external growth, with a focus on services. Eurocopter will also seek to capitalise on its experience of cooperation with local industries for programme development and joint production projects such as the EC175 with China or the Korean Helicopter Programme ("KHP") in Korea.

Implementing an ambitious product and services policy

In order to maintain market leadership and technological superiority, Eurocopter must continuously invest in the renewal of its comprehensive product line of civil and military helicopters. Accordingly, management is currently focused on (i) strengthening the market position of key products such as the Ecureuil family, the Dauphin, the EC135, the EC145 and the EC225/725, (ii) promoting Eurocopter's most recent products (Tiger and NH90), and (iii) enhancing its product line (e.g. co-development of the civil medium lift EC175 with China and partnership with Korean industry to develop the military utility KHP, as well as the development of the X-series programme (new Dauphin) and the Bluecopter technology programme on environmental friendliness). Through the combination of core technological solutions with high-value customisation capabilities, Eurocopter seeks to offer a cost efficient solution to multi mission needs, for both civil and military customers throughout all segments of the helicopter market.

In addition, Eurocopter will seek a significant expansion in its service offering in order to enhance aircraft availability as well as mission performance and cost effectiveness for its customers, while increasing margins on longer-term contracts through the provision of higher value added services. Eurocopter is also considering further development on training and software maintenance activities, which have been identified as key drivers for the future.

MARKET

Market Drivers

The value of helicopters delivered worldwide grew from an estimated €8.8 billion in 2008 to an estimated €11.5 billion in 2009, a figure that management believes will decrease in 2010. According to market forecasts published by The Teal Group, Honeywell and Rolls Royce, between 7,000 to 9,500 civil helicopters and 6,500 to 6,800 military helicopters are expected to be built globally between 2009 and 2018. This forecast, particularly with respect to the military segment, relies to a large extent on the large US development programmes.

Demand for military helicopters, which are usually larger and have more sophisticated systems than civil helicopters, is mainly driven by budgetary and strategic considerations, and the need to replace ageing fleets. Management believes that the advanced age of current fleets, the emergence of a new generation of helicopters equipped with integrated systems and the ongoing introduction of combat helicopters into many national armed forces will contribute to increased military helicopter procurement over the next years. Recent large-scale military programmes, such as those conducted by Australia, Brazil, Spain, UK, Korea and the Nordics Standard Helicopter Project, have confirmed this trend. Demand from the military segment has historically been subject to large year-to-year variations, due to evolving strategic considerations.

The military segment is highly competitive and is characterised by competitive restrictions on foreign manufacturers' access to the domestic defence bidding process, sometimes to the virtual exclusion of imports. Nevertheless, with the introduction of the Tiger, NH90 and EC725 and with a more aggressive approach to international industrial cooperation, Eurocopter's share of the global market for military helicopters has increased. In 2009, Eurocopter ranked second in the military segment by orders in a market still dominated by US manufacturers. Eurocopter's main competitors in this segment are Agusta-Westland in Europe, and Sikorsky, Boeing and Bell Helicopter (a division of Textron Inc.) in the United States. In addition, Russian manufacturers have reappeared after a complete commercial and industrial reorganisation. Recently they have been more aggressive particularly in the Asian and Latin American markets. Military sales accounted for 48% of Eurocopter's revenues in 2009.

Helicopters sold in the civil sector provide transport for corporate executives, offshore oil operations, diverse commercial applications and state agencies, including coast guard, police, medical and fire-fighting services. Market data indicates that in 2009, worldwide deliveries of civil turbine helicopters stood at approximately 831 units. Management expects that the value of global civil deliveries will likely decrease in 2010 as a result of the global economic downturn. At Eurocopter, the lower order intake for light helicopters in 2009 will lead to lower production rates in 2010, while military helicopter production rates will increase.

Eurocopter's main worldwide civil competitors are Agusta-Westland, Sikorsky and Bell Helicopter. The civil helicopter market has grown more competitive in recent years, with Sikorsky and Agusta-Westland having increased their market share in the heavy and medium helicopter classes.

Customers and Marketing

Approximately 2,800 operators worldwide currently operate Eurocopter helicopters in 140 countries, forming a broad base for Eurocopter's customer support activities. 85% of Eurocopter's customers have fleets of between one and four helicopters. Eurocopter's principal military clients are European MoDs, as well as MoDs in Asia and the US. In the civil and parapublic market, Eurocopter has a leading market share in Europe, the US and Canada.

The versatility and reliability of Eurocopter products have made them the preferred choice of the most prominent customers. The world's largest offshore operators (Bristow, CHC, Era, PHI, etc.) use Eurocopter helicopters for passenger transport and offshore oil industry support. In the emergency medical services market segment, Eurocopter helicopters dominate the fleets of large operators such as Air Methods in the US and ADAC in Germany. Agencies with high serviceability requirements, including police and armed forces, also rely on Eurocopter products.

Eurocopter's global marketing strategy is reflected in the scale of its large international network. Eurocopter's network currently encompasses 20 foreign subsidiaries, complemented by a network of authorised distributors and service centres aimed at a large number of existing and potential clients. Eurocopter strengthened its subsidiary network in 2009 through the creation of Eurocopter Japan via the acquisition of its former distributor in the country and the acquisition of a majority stake in ANAM's helicopter maintenance business. In addition, Eurocopter has developed expertise in production licensing, joint production and subcontracting agreements, and has been developing links with industrial partners and suppliers in more than 35 countries.

PRODUCTS AND SERVICES

Existing Products

Eurocopter offers a complete range of helicopters that covers nearly the entire civil and military market spectrum, which it updates continuously with leading-edge technologies. This product range includes light single-engine, light twin-engine, medium and medium-heavy helicopters, and is based on a series of new-generation platforms designed to be adaptable to both military and civil applications. In addition, products share multiple technical features as part of a family concept approach.

The following table sets forth Eurocopter's existing product line, consisting of optimised products for different mission types:

Helicopter Type	Primary Missions
Light Single Engine	
EC120 "Colibri"	Corporate/Private, Civil & Military Training
Single Engine ("Ecureuil" Family)	
AS350 "Ecureuil"/AS550 "Fennec"	Parapublic*, Civil & Military Utility**, Corporate/Private
EC130	Tourism, Oil & Gas, Corporate/Private
Light Twin Engine	
AS355NP/AS555	Parapublic*, Utility, Corporate/Private
EC135/EC635	Emergency Medical, Parapublic*, Oil & Gas, Corporate/Private
EC145/LUH (UH-72)	Civil & Military Utility**, Emergency Medical, Parapublic*, Shuttle
Medium ("Dauphin" Family)	
AS365 "Dauphin"/AS565 "Panther"	Parapublic* (in particular Coast Guard & SAR), Oil & Gas
EC155	Corporate/Private, VIP, Oil & Gas, Parapublic*, Shuttle
Medium Heavy	
AS332 "Super Puma"/AS532 "Cougar"	Military Transport, Oil & Gas, Shuttle
EC225/EC725	SAR, Combat-SAR, Military Transport, Oil & Gas, VIP
NH90 (TTH/ NFH)	SAR, Combat-SAR, Military Transport, Naval
Specific	
Tiger	Combat, Armed reconnaissance/Escort

* Parapublic includes homeland security, law enforcement, fire fighting, border patrol, coast guard and public agency emergency medical services.

** Civil Utility includes different kinds of commercial activities such as aerial works, ENG (Electrical New Gathering), passenger and cargo transport.

Civil range. Eurocopter has consistently made strong efforts to update and renew its civil product line in order to enhance and maintain its competitive edge in the civil segment. Over the years Eurocopter has successfully introduced internationally new products such as the light single-engine EC120 and the light twin-engine EC135, and major product upgrades such as the EC155 latest evolution of the medium-class Dauphin, as well as the EC145. The latest addition to the heavy-class family is the EC225. It is designed for passenger transport, in particular Oil & Gas and VIP, but also for public service missions, such as search and rescue (SAR).

In 2009, Eurocopter received 322 firm orders for its civil range of helicopters (including the respective military derivative versions), and delivered 536 to customers.

Light Utility Helicopter (LUH) programme. The US Army has selected the UH-72A Lakota (a military derivative of the commercial EC145) as its next-generation LUH, with a requirement for up to 345 aircraft over a 10-year span with a total life-cycle value of more than \$ 2 billion. The US Army ordered 42 aircraft in 2006, followed by additional orders for 43 aircraft in 2007, 39 aircraft in 2008 and 51 in 2009. There were 40 LUH deliveries in 2009, for a total of 96 deliveries done all on schedule as of the end of 2009. All deliveries were made from American Eurocopter's new facility in Columbus, Mississippi.

New Product Development

Current product development programmes in the military and civil segment include (i) the NH90, a military transport helicopter with more than 20 versions for tactical, naval and combat-search and rescue applications, (ii) the HAD version of the Tiger helicopter, (iii) the KHP for military applications, and (iv) the EC175, as described below.

NH90. Designed for modern multi-mission capabilities and cost effectiveness throughout its lifecycle, the NH90 has been developed as a multi-role helicopter for both tactical transport (TTH) and naval (NFH) applications. The programme, mainly financed by the governments of France, Germany, Italy and the Netherlands, has been jointly developed by Eurocopter, Agusta-Westland of Italy and Fokker Services of the Netherlands as joint partners in Nato Helicopter Industries (“NHI”) in direct proportion to their countries’ expressed procurement commitments. Eurocopter’s share of NHI is 62.5%. Production started in 2000, with 15 deliveries in 2009 (five to Germany, two to Italy, two to Finland, two to Sweden and four to Australia) for a total of 40 cumulative deliveries as of the end of 2009. In 2009, Eurocopter received an order from the French Defence Procurement Agency (DGA) for a second batch of 22 aircraft, bringing the NH90’s backlog to 489 firm orders at the end of 2009.

The NH90 has rapidly become the reference military tactical helicopter for armed forces worldwide, with orders for 23 different versions from 14 countries. The strong commercial success of the NH90, combined with the complexity of such a modern aircraft and the management of relationships between industry and customers has generated a significant increase in programme management challenges and margin pressure. In order to better manage these challenges, Eurocopter implemented an action plan in 2008 to change programme governance (including industry re-organisation), reframe contract management, and restructure industry processes (with a focus on simplification, clearer allocation of responsibility and increased responsiveness) with positive results in 2009.

Tiger. The Tiger combat attack helicopter programme includes four variants based on the same airframe: the HAP (turreted gun, rockets and air-to-air missile), 40 of which have been ordered by France; the UHT (antitank missile, air-to-air missile, axial gun and rockets), 80 of which have been ordered by Germany; the ARH (antitank missile, turreted gun and rockets), 22 of which have been ordered by Australia; and the HAD (antitank missile, air-to-air missile, turreted gun, rockets and upgraded avionics and engines), 24 and 40 of which have been ordered by Spain and France, respectively. In 2009, the Tiger was deployed in Afghanistan by the French Armed Forces, proving unparalleled reliability and serviceability in the operational theatre.

There were seven Tiger deliveries in 2009 (five to France, one to Germany and one to Australia), for a total of 55 deliveries as of the end of 2009.

KHP. The Korean government chose Eurocopter as the prime partner of Korea Aerospace Industries (“KAI”) in the new KHP programme for the development of Korea’s first military transport helicopter in the 8 metric ton class. The 6-year KHP development phase will run from 2006 to 2011. In the following 10-year production phase, 245 helicopters are to be manufactured. As the primary partner of KAI, Eurocopter has a stake of 30% in the development phase and 20% in the production phase. Eurocopter and KAI intend to establish a subsidiary to market the export version of the KHP. In 2009, the successful roll-out of the first prototype showed that the programme was on schedule.

EC175. Eurocopter and Chinese AVIC II Corporation launched the joint development and production (on a 50/50 basis) of the EC175, a civil helicopter in the 6-ton category, which will broaden both partners’ product ranges. The 5-year development phase began in 2006. In 2008, the EC175 was unveiled at the US-based Heli-Expo, which led to the signature of letters of intent with 13 operators for a total of 111 aircraft. Assembly of the first prototype began at the end of 2008 in Marignane following the delivery of the first airframe structure from the Chinese partner. In 2009, the EC175 made its maiden flight on schedule, on performance and on cost. Delivery of the first EC175 helicopter is expected to take place in 2012.

Customer Support

As of 31 December 2009, Eurocopter products constituted the world’s second largest manufacturer fleet, with more than 10,500 helicopters in service worldwide. As a result, customer support activities to service this large fleet generated 35% of Eurocopter’s revenues for 2009. Eurocopter’s customer support activities consist primarily of training, technical support, maintenance, repairs and spare parts supply. To provide efficient worldwide service, Eurocopter has established an international network of subsidiaries, authorised distributors and service centres. Furthermore, in order to meet globalising customer demand, Eurocopter is extending the range of services it provides to its customers.

In 2009, Eurocopter inaugurated two customer service centres: one in Hong-Kong for the Asia-Pacific region, and one in Dallas for the Americas. On the training front, following the creation of a Eurocopter training services company in 2004 in Bueckeburg, Germany, to develop, produce and operate the NH90 full mission flight simulators for pilot training, the simulators were declared “Ready for acceptance” in 2009. In parallel, various other flight simulators were launched or went into operation throughout the year.

Eurocopter seeks to continuously improve the quality of its service offering, such as spares delivery performance, which in 2009 recorded an on-time delivery ratio of approximately 85%.

PRODUCTION

Eurocopter's industrial activities are conducted in five primary locations, two in France, two in Germany and one in Spain. The French sites are Marignane, in southern France, and La Courneuve, near Paris. The German sites are located in Donauwörth and Ottobrunn, near Munich. The Spanish site is located in Albacete.

Inaugurated in 2007, the new Eurocopter España plant in Albacete is responsible for the production of the rear fuselages of the EC135 and Tiger as well as the front fuselage of the NH90. The plant houses the final assembly lines for the EC135 intended for the Spanish market, the Spanish HAD version of the Tiger from 2008 and the NH90 in TTH version for the Spanish MoD.

1.1.4 Astrium

INTRODUCTION AND OVERVIEW

Astrium designs, develops and manufactures satellites, orbital infrastructures and launcher systems and provides space services. It is the third largest space systems manufacturing company in the world after Boeing and Lockheed Martin and the leading European supplier of satellites, orbital infrastructures, launchers and associated services. In 2009, Astrium recorded revenues of €4.8 billion, representing 11.2% of EADS' total revenues.

Astrium has three main business units: Astrium Satellites, Astrium Space Transportation and Astrium Services. These include the provision of launch services through Astrium's shareholdings in Ariespace (Ariane 5 launcher), Starsem (Soyuz launcher) and Eurokot (Rockot launcher), as well as services related to telecommunications and earth observation satellites through wholly or majority owned subsidiaries such as Paradigm Secure Communications, Infoterra and Spot Image.

STRATEGY

With its established presence in five European countries that have active space programmes (France, Germany, United Kingdom, Spain and the Netherlands), Astrium is the only European company to offer comprehensive expertise in all areas of the space industry (satellites, launchers, orbital infrastructure and services). Astrium's strategy is to build on these key strategic assets and to strengthen its position in the market. In particular, with the launchers and satellites markets being flat, Astrium has

Following major expansion in 2008, the Columbus plant of American Eurocopter in Mississippi continued to ramp-up LUH production, assembly and delivery. Industrial activity had commenced in 2006 with LUH assembly and delivery and is now at full-scale production following the production authorisation granted by the Federal Aviation Administration. Activities at the Columbus plant also include production and assembly of the AS350 and EC120 for US Customs and Border Patrol as well as the support of the US Coast Guard's programme of modernisation of its Dolphin helicopter fleet.

Overall, serial helicopter deliveries decreased by approximately 5% in 2009 and are expected to further decrease in 2010 (although remaining above 500 units per year) before picking up again in 2011. Eurocopter will continue to pursue international expansion of its global supply chain with an emphasis on dollar-based and low-cost sourcing in particular, while also seeking to rationalise its supply network and streamline its internal industrial organisation.

successfully built a services activity which is expected to provide the largest part of its development in the coming years.

Generate profitable growth in a flat market

Institutional and military spending on space activities is flat in Europe due to existing budget constraints. There is also intense competition in commercial markets for launchers and telecommunication satellites, in particular given the lows reached by the US dollar against the euro during most of 2009. Within this difficult market context, Astrium is pursuing the following strategy:

- ▶ with respect to the Ariane launcher and M51 missile systems, Astrium Space Transportation has sought to rationalise and streamline its activities by assuming the role of prime contractor (as opposed to a main supplier and industrial architect only). This has strongly contributed to increasing the reliability and cost effectiveness of these products. In addition, Astrium is currently the second largest shareholder of Ariespace with a 30.5% stake after the French space agency ("CNES"). Astrium Space Transportation will seek to build on this leadership to better serve its customers; and
- ▶ with respect to satellites and services, Astrium has sought in recent years to move from being solely a systems supplier to a leading satellite service provider in the areas of secure communications, earth observation and navigation. The achievement of the full operational service milestone of a secure global military satellite communications system to

1

2

3

4

5

Back to Contents

primarily serve the UK MoD, and the successful in-orbit delivery of the first secure communication satellite for the German Armed Forces (Bundeswehr), represent important steps forward in 2009. In the future, Astrium will seek to expand its offering of innovative, highly competitive end-to-end tailored solutions in the field of secure communications. It will also seek to strengthen its position in earth observation services and to enhance its presence in satellite navigation services.

Attain European benchmark profitability

Management is committed to the implementation of additional measures to enhance profitability and innovation (“Inovex” for Astrium Satellites, “Boost+” for Astrium Space Transportation and “Services Improvement” for Astrium Services), within the context of the “Power8 Plus” and “Future EADS” integration and cost savings initiatives launched by EADS. These measures target continued margin improvement over time.

ASTRIUM SATELLITES

Astrium Satellites is a world leader in the design and manufacture of satellite systems, payloads, ground infrastructure and space equipment for a wide range of civil and military applications. Prime contractor for nearly 90 communications satellites, Astrium Satellites is a partner of choice for many of the world’s most prestigious operators. Astrium Satellites’ business covers the four categories of satellite systems described below:

- *telecommunications satellites*, which have multiple applications, such as long-distance and mobile telephone links, television and radio broadcasting, data transmission, multimedia and Internet trunking. They may be used for civil or military applications;
- *observation satellites*, which allow the collection of information for various fields, such as cartography, weather forecasting, climate monitoring, agricultural and forestry management, mineral, energy and water resource management and military surveillance applications;
- *scientific satellites*, which are tailor-made products adapted to the specific requirements of the mission assigned to them. They have applications such as astronomical observation of radiation sources within the universe, planetary exploration and earth sciences; and
- *navigation satellite systems*, which deliver signals that enable users to determine their geographic position with high accuracy, and are increasingly significant in many sectors of commercial activity, such as airlines, transport operators on land, sea and air, emergency services, agriculture and fisheries, tourism and telecommunications networks.

At the end of 2008, Astrium acquired Surrey Satellite Technology Limited (SSTL), the innovative University of Surrey spin-out company, expanding its product range to the small satellites and subsystems end of the market.

Market

The commercial telecommunications satellite market is extremely competitive, with customer decisions based on price, technical expertise and track record. Astrium Satellites has a worldwide market share of approximately 23% according to internal estimates, and its main competitors are Loral, Boeing and Lockheed Martin of the United States, Thales Alenia Space (TAS) of France and Italy, and Information Satellite Systems Reshetnev of Russia. Management views the telecommunications satellite market as one of slow but sustained growth, supported by factors such as (i) increased telecommunications demand, including Internet, multimedia and military needs, and (ii) greater demand to replace aging products. In the face of continued strong competition, Astrium Satellites will seek to consolidate its position in this market.

In the market for observation, scientific and navigation satellites, competition in Europe is organised either on a national or multinational (European Space Agency (“ESA”), Eumetsat) level. In the latter instance, a fair return principle pursuant to which contracts are awarded to national suppliers in proportion to the respective financial contribution made by their governments is often employed. There is also sizable export demand for earth observation systems, for which EADS is currently the sole significant European provider. Furthermore, civil state agencies, including ESA, have displayed increased needs for earth observation satellites in the framework of European environmental programmes. Management expects this market to remain stable over the medium term.

Finally, within the market for military satellites, demand for telecommunications and observation satellites has increased. In recent years, the shortcomings of European military capabilities in these areas have become apparent, while the need for preparedness in the face of elusive threats has only grown. The Skynet 5/Paradigm contract in the United Kingdom, the Satcom BW contract in Germany, the Yahsat contract in the UAE and other development contracts in France demonstrate the growth trend in this market.

Products

Astrium offers turnkey satellite systems to its customers through an array of wholly owned subsidiaries such as (i) Astrium Spain, which supplies platforms, space-borne antennas, deployment mechanisms and harness subsystems for telecommunication satellites, (ii) Tesat (Germany), which is in charge of telecommunication electronic equipment and subsystems, (iii) EADS Sodern (France), which provides satellites sensors, and (iv) Dutch Space (Netherlands), which provides solar arrays and other specialised items.

Telecommunications Satellites. Astrium Satellites produces telecommunication satellites for fixed and mobile applications and direct-to-home broadcast services. EADS' geostationary telecommunications satellites are based on the EUROSTAR family platforms (63 ordered to date), the latest version of which is EUROSTAR 3000.

Astrium Satellites won seven commercial satellite orders in 2009 (for a 23% worldwide market share), all based on the EUROSTAR platform (Arabsat 5C & 6B for Arabsat, Atlantic Bird 7 for Eutelsat, Astra 2E/2F/2G & 5B for SES). Two commercial and one military telecommunication satellites were successfully launched in 2009: Hotbird 10 for Eutelsat (February 2009), Amazonas 2 for Hispasat (October 2009) and SatCom BW1 for German Army (October 2009).

Observation and Science Satellites. Astrium Satellites is the leading European supplier of earth observation satellite systems for both civil and military applications. In this field, customers derive significant benefits from the common elements of Astrium Satellites' civil and military programmes.

Astrium Satellites designs and manufactures a wide range of highly versatile platforms, optical and radar instruments, and ground segment equipment for the complete scope of remote-sensing applications, operations and services. Astrium Satellites is the prime contractor for most of ESA's and CNES' principal observation programmes. In particular, it is the prime contractor for (i) the Spot multi-mission platform series, in use in 15 European earth observation satellites and recognised as an industry standard, (ii) Metop, a next-generation polar-orbiting meteorological satellite, with the first one out of three having been launched in 2006, (iii) Pleiades, two small and highly agile earth observation satellites for civil and military applications, expected to be launched in 2010, (iv) Swarm, a climatology satellite monitoring the evolution of the earth's magnetic fields, (v) Cryosat 2, a radar satellite designed to monitor the thickness of polar ice caps, (vi) Tandem X, an imagery satellite, (vii) Bepi Colombo, an observation mission to Mercury, and (viii) Seosat and Seosar, a radar earth observation system for the Spanish government.

In 2009, one observation satellite (Seosat) was sold to the Spanish Center for the Development of Industrial Technology and two earth observation satellites (Spot 6 and Spot 7) to Spot Image, a subsidiary of Astrium Services. The military earth observation satellite for the French Defence Procurement Agency (DGA), Helios 2B, was also successfully launched in December 2009.

In addition, in October 2009 Astrium and KGS, the national Kazakh space company, signed a contract for two earth observation satellites and the foundation documents to create a joint venture for the construction of an assembly integration and test facility in Astana.

Navigation Satellites. Following the decision reached by the European Union at the end of 2007 to move ahead with the development of a European global satellite navigation system, "Galileo", ESA has been placed in charge of direct procurement of the various necessary components (space segment, ground segment, system support, launchers, etc.). With respect to the satellites needed for the validation phase of the programme, Astrium successfully launched the Giove B satellite, which will have completed its second year in orbit in April 2010. Astrium is also responsible for the Galileo in-orbit validation phase ("IOV") to test the new satellite navigation system under real mission conditions. The IOV phase covers the construction of the first four satellites of the constellation and part of the ground infrastructure for Galileo, followed by the testing of this partial system.

Military Satellites. In addition to military earth observation activity, Astrium Satellites is active in the market for various other advanced applications. These systems demonstrate Astrium's leading role in complex systems offers, reflecting the efficient use of synergies between Astrium's space and defence activities.

ASTRIUM SPACE TRANSPORTATION

Astrium Space Transportation is the European space infrastructure and space transportation specialist. It designs, develops and produces Ariane 5 launchers, the Columbus laboratory and the ATV cargo carrier for the International Space Station ("ISS"), ballistic missiles for France's deterrence forces, propulsion systems and space equipment.

Orbital Infrastructure

The orbital infrastructure segment in which Astrium Space Transportation operates comprises manned and unmanned space systems. The ISS, together with related vehicle and equipment development programmes and services, constitutes the predominant field of activity in this segment. Astrium Space Transportation is the prime contractor under an ESA contract relating to two key elements of the ISS: the Columbus Orbital Facility laboratory ("COF") and the ATV cargo carrier.

Market

Demand for orbital infrastructure systems originates solely from publicly funded space agencies, in particular from ESA, NASA, Roscosmos (Russia) and NASDA (Japan). Such systems are usually built in cooperation with international partners. In addition to the COF and ATV projects, ESA is responsible for additional ISS components for the station's construction and operational phases. National space agencies, such as DLR and CNES, are also involved in the development of experimental facilities to be used on the ISS.

1

2

3

4

5

Back to Contents

Products

Astrium Space Transportation is the prime contractor for the development and integration of the COF. The COF is a pressurised module with an independent life-support system. The COF was lifted to the ISS on the shuttle flight of 7 February 2008. It provides a full-scale research environment under microgravity conditions (material science, medicine, human physiology, biology, earth observation, fluid physics and astronomy) and serves as a test-bed for new technologies.

Astrium Space Transportation is also the prime contractor for the development and construction of the ATV, designed to carry fuel and supplies to the ISS and to provide reboost capability and a waste disposal solution. The first ATV, "Jules Vernes", was launched in March 2008 and docked to the ISS. After six months in orbit, it was de-docked from the ISS and burned upon re-entering the atmosphere. The second ATV, "Johannes Kepler", is currently undergoing its first flightworthiness and functionality tests, with a delivery date scheduled for November 2010. The production of ATV units two to five, as well as mission preparation and operations support, is covered by the contract which governs the operation and provision of European components to the ISS.

Launchers & Launch Services

Space systems (including satellites, orbital infrastructure elements and interplanetary probes) depend on rocket propelled multi-stage launchers, which are consumed during the launch process, to place them into orbit. Astrium Space Transportation is active in two distinct businesses: (i) designing and manufacturing launchers for both civil and military purposes, and (ii) providing launch services through its interests in Arianespace, Starsem and Eurockot.

Astrium Space Transportation is the sole prime contractor for the Ariane 5 system, with responsibility for the delivery to Arianespace of a complete and fully tested vehicle. Astrium Space Transportation also supplies all Ariane 5 stages, the equipment bay, the flight software, as well as numerous sub-assemblies. Additionally, Astrium Space Transportation is the prime contractor for ballistic missile systems to the French State. It is responsible for the development, manufacturing and maintenance of the M45 and M51 submarine-launched missiles and related operating systems.

Market

The market for commercial launch services has changed significantly in recent years. Russian companies and state agencies have increased their prices dramatically, thereby making other launchers more competitive in the market. Management believes that the available market for commercial launch services will likely remain stable at 20/25 payloads per year, relating

primarily to the launch of geostationary telecommunications satellites. However, due to various factors (such as technology advances and consolidation of customers), this figure remains volatile. This market does not include institutional launch services for the US, Russian and Chinese military and governmental agencies.

In the area of national defence, Astrium Space Transportation has been the exclusive supplier of ballistic missiles to the French State since the early 1960s. In addition to conducting production and state-financed development work, Astrium Space Transportation performs substantial maintenance work on the ballistic missile arsenal to ensure system readiness over the life span of the equipment, which may stretch over several decades. Astrium Space Transportation also provides on-site support to the French military. Finally, Astrium Space Transportation is working in partnership with others on a NATO contract relating to theatre missile defence architecture.

Products and Services

Launch Services. Astrium Space Transportation is active in the field of launch services through its shareholdings in Arianespace (for heavy-lift launchers), Starsem (for medium-lift launchers) and Eurockot (for small-lift launchers).

➤ *Arianespace.* Astrium Space Transportation is Arianespace's second largest shareholder (after CNES) with a 30.5% stake (direct and indirect), and its largest industrial shareholder. Arianespace is the world's largest commercial launch service provider in terms of total order book. At the end of 2009, Ariane had launched a total of 277 satellites. Arianespace markets and sells the Ariane launcher worldwide and carries out launches from the Kourou space centre in French Guyana.

In 2009, Arianespace won 13 new commercial contracts, representing more than 50% of the available market, and three institutional contracts. Arianespace conducted seven Ariane launches, which placed nine commercial satellites and three institutional satellites into orbit. Since 1999, when the first Ariane 5 commercial launch occurred, 49 Ariane 5 rockets have been successfully launched.

➤ *Starsem.* Astrium Space Transportation directly owns 35% of Starsem, a French corporation, along with Arianespace (15%), the Russian space agency (25%) and the Russian state-owned Central Specialised Design Bureau "Progress" (25%). Through Arianespace, Starsem markets launch services by Soyuz launchers for medium-weight spacecrafts into low or sun-synchronous orbits as well as for interplanetary missions. Work is progressing on the Kourou launch pad, with the first two launches (to be operated by Arianespace) scheduled in 2010.

➤ *Eurockot.* Astrium Space Transportation (51%) and Khrunichev (49%) jointly control Eurockot Launch Services, which provides launch services for small, low-earth orbit satellites with Rockot launchers derived from SS-19 ballistic missiles.

Commercial Launchers. Astrium Space Transportation manufactures launchers and performs research and development for the Ariane programmes. Member states, through ESA, fund the development cost for Ariane launchers and associated technology.

Astrium Space Transportation has been the sole prime contractor for the Ariane 5 system since 2004. Given the commercial success of Ariane 5, Astrium Space Transportation signed a contract with Arianespace in 2009 for the production of 35 Ariane 5 launchers, in addition to the batch of 30 Ariane 5 launchers ordered in 2004.

Ballistic Missiles. Astrium Space Transportation is the only company in Europe which designs, manufactures, tests and maintains ballistic missiles. Under its contracts with the French State, Astrium Space Transportation has produced the submarine launched MSBS family (M1, M2, M20, M4 and M45) and developed the launch facilities at the Brest naval base. The M45 is deployed onboard France's new-generation nuclear-powered ballistic missile submarine. Astrium Space Transportation manages the operational maintenance of the M45 missile system, assisting the French armed forces until the end of its operational service.

Astrium Space Transportation is also under contract to develop the M51, a new submarine-based strategic missile system with increased technical and operational capabilities. The third and last test flight of this new missile was conducted in November 2008 and was fully successful. At the end of 2004, the French MoD awarded Astrium Space Transportation a contract for the M51 production phase and test range facilities with a frame-contract in excess of €3 billion. At the end of 2006, a contract for an enhanced upper-stage was awarded by the French MoD for an amount of more than €200 million, helping to secure Astrium Space Transportation's technical capabilities in this field for the long-term.

ASTRIUM SERVICES

Astrium Services offers innovative, highly competitive end-to-end tailored solutions in the fields of secure communications, earth observation and satellite navigation. The European "one-stop-shop" provider for military satellite communications services, Astrium Services delivers secure military satellite services to a number of countries. In addition, it intends to be a major player in the satellite navigation field through work on "Galileo", following the renewed commitment to the programme made by the EU.

Products and Services

Military Communications. In 2003, the UK MoD selected Paradigm to deliver a global military satellite communications service for its next-generation Skynet 5 programme. This contract, pursuant to which Paradigm currently owns and operates the UK military satellite communications infrastructure, allows the UK MoD to place orders and to pay for services as required. Offering a catalogue of services, Paradigm delivers tailored in-theatre and back-to-base communication solutions for voice, data and video services, ranging from a single voice channel to a complete turnkey system incorporating terminals and network management. Paradigm also provides welfare services, ensuring that deployed troops can call home and can use the Internet. The first two Skynet 5 satellites were launched in 2007 and the third was lifted in 2008, enabling the UK MoD to pronounce full operational service in 2009.

In Germany, a team led by Astrium Services will be providing Germany's first dedicated satellites for a secure communications network. Two military-frequency satellites and a comprehensive user ground terminal segment will give the German Armed Forces (Bundeswehr) a secure information resource for use by units on deployed missions, with voice, fax, data, video and multimedia applications. The first satellite (ComSat BW1) was launched in November 2009, and the second satellite (ComSat BW2) is scheduled for launch in early 2010. The entire system including the ground stations is scheduled to commence operations from the end of 2010. Astrium Services, through a joint venture with ND Satcom (Astrium Services: 75%, ND Satcom: 25%) will operate the system on a long-term basis and provide additional capacity from commercial operators.

In Abu Dhabi, Astrium Services (together with Thales Alenia Space) is working on a contract signed with Mubadala Development Company in 2007 for the construction of a secure satellite communications system. Astrium Services is managing the programme and will supply the space segment (except for the payload) and 50% of the ground segment. Work is ongoing and full delivery is expected in 2011.

Navigation. Following extensive negotiation and discussion, the EU decided at the end of 2007 to move ahead with development of the Galileo programme. The ESA has been placed in charge of direct procurement of the various necessary components (space segment, ground segment, system support, launchers, etc.) with full deployment targeted for 2013. This process has begun, and Astrium Services intends to be a major player in the reorganised programme. The Galileo programme is a major step forward for Europe, representing the first major European-level infrastructure procurement programme with a global dimension that will bring numerous benefits to the continent and the rest of the world. The market potential is promising, as global demand for satellite navigation services and derivative products is growing at approximately 25% a year according to internal estimates.

Earth Observation Services. Infoterra provides geoinformation products and services to customers including international corporations, governments and authorities around the world. The successful launch of TerraSAR-X in 2007 – a new radar-based earth observation satellite that provides high-quality topographic information – enabled Infoterra to significantly expand its capabilities by proposing new kinds of images based on radar. In 2008, Astrium, Infoterra's parent company, increased its shareholding in Spot Image, a provider of satellite-based geographic information and services, from 40% to 81% and then to 96.3% in 2009.

In 2009, Spot Image started work on the “Astroterra programme”, which is designed to replace Spot 5 (owned by

the French state with an exclusive operating license granted to Spot Image) before the end of its lifetime with a constellation of two earth observation satellites (Spot 6 and Spot 7) in order to maintain high resolution capability through to 2023.

PRODUCTION

Astrium currently operates production facilities located in France (Vélizy, Les Mureaux, Bordeaux, Toulouse, Limeil-Brévannes, Orléans, les Ulis), Germany (Backnang, Bremen, Friedrichshafen, Lampoldshausen, Ottobrunn, Rostock, Trauen), Spain (Madrid), the United Kingdom (Portsmouth, Stevenage, Leicester, Newcastle), the Netherlands (Leiden) and French Guyana (Kourou).

1.1.5 Defence & Security

INTRODUCTION AND OVERVIEW

The DS division serves as the main pillar of EADS' defence and security activities. By combining its Defence and Communications Systems, Defence Electronics, Military Air Systems and missile systems (consisting of EADS' 37.5% stake in MBDA) business units within one division, EADS has streamlined its defence and security business to better meet the needs of customers that require integrated defence and security solutions.

In 2009, the DS division recorded revenues of € 5.4 billion, representing 12.5% of EADS' total revenues.

STRATEGY

The DS division is seeking to actively support the implementation of EADS' Vision 2020 plan, by:

- strongly growing defence and security revenues to balance Group commercial aircraft exposure;
- improving profitability above benchmark level;
- increasing its services business; and
- transforming itself into a truly global division.

Supporting the transformation process of customers

Through already existing programmes with NATO, the European Defence Agency (EDA) and the defence ministries of its home countries (in particular France, UK, Germany and Spain), the DS division actively supports the transformation of European and NATO defence and security forces. The DS division also participates in the Network Centric Operations Industry Consortium (NCOIC), an industry-based collaborative forum

formed to recommend an architectural approach for system and platform developers within a global network environment.

Going forward, the DS division will continue to work closely with industry and customer working groups to help define and deliver solutions that further support the transformation process of defence and security forces in both Europe and abroad.

Pursuing future growth areas

Within a difficult budget environment for its governmental customers, the DS division will seek to maintain its leadership in core areas (such as combat aircraft, defence electronics, defence and security systems and missiles) and simultaneously target fast growing markets such as:

- the UAV market, where the DS division will seek to develop a leading position based on its strong experience and projects to date (*e.g.*, Euro Hawk®, Harfang, Barracuda, DRAC); and
- the global security market, where the DS division offers solutions such as integrated systems for global security, comprehensive security communications solutions and security electronics. Recent project awards in the Middle East make the DS division a world leader in integrated nationwide security solutions.

Improving profitability

Through rigorous implementation of cost reduction programmes and re-focusing on its core business, the DS division has strongly improved its profitability over the past five years in order to attain European benchmark levels. Through dedicated improvement programs and further integration of the Division, the DS division targets further enhancement of its profitability in the future.

Developing customer services

While already a significant player in the services market, the DS division will seek to enhance its offering of comprehensive packages of mission-critical services to its customers, in and outside EADS home countries. This service portfolio ranges from consultancy, concept development and simulation, to through-life support of aerial platforms, fleet service/flight service, training, operation and outsourcing.

Consolidating in home markets while becoming a global player

The DS division will seek to consolidate its position in its European home markets (France, Germany, Spain and the UK) in order to sustain future growth. Within these markets, the DS division will aim to leverage its technology and skills in the areas of electronics, airborne platform, missiles and system businesses in particular.

In parallel, the DS division will strive to increase its market share in the key US market – in close coordination with EADS North America – by offering superior products and technologies, such as the HELLAS obstacle avoidance system for helicopters, the TRS 3D radar system or the Professional Mobile Radio P25 technology. DS is also building strong transatlantic industrial partnerships with US prime contractors to explore new opportunities, including Northrop Grumman (Euro Hawk®), Lockheed Martin (MEADS, Deepwater, Littoral Combat Ship, COBRA, Missile Defence) and Raytheon (Missile Defence).

DS will also seek to develop in other markets with significant growth potential, such as the Middle East, Brazil and India. DS is targeting not only wins of key campaigns, like the contracts for border surveillance in Qatar and Saudi Arabia, but also development of a long-term industrial presence through organic or external growth in order to be considered as a trusted local player by potential customers.

DEFENCE AND COMMUNICATIONS SYSTEMS (“DCS”)

DCS is the EADS “Systems House”. Its mission is to develop complete communication and information system solutions (including platforms) and provide the means for their implementation. DCS offers its customers comprehensive and tailored solutions, including the ability to design, develop and implement Lead Systems Integration (LSI) and link the widest possible range of individual platforms and subsystems into a single effective network. Systems integration has become increasingly important for customers engaged in border control and coastal surveillance, as well as for non-military customers in areas such as homeland security, all of which are areas of major focus for DCS.

In 2009, DCS generated 26.0% of the DS division’s total revenues.

Market

DCS faces competition from large US and European companies that also specialise in its markets. Major competitors are Lockheed Martin, Thales, Motorola and General Dynamics. Key customers for DCS’ business primarily include governmental customers, such as MoDs and Ministries of Interior in its home markets of France, Germany and the UK, with an increasing focus on other European countries, the Middle East, South Africa, Asia and the US.

Products and Services

Defence. DCS offers comprehensive mission systems and solutions in the areas of air dominance, battle space systems, intelligence solutions and naval systems, as well as overall systems support. It is a leading provider for full systems design architecture and systems integration responsibility for military land-, sea-, air- and space-based systems. DCS delivers airspace dominance systems for defensive, offensive and support operations in a combined, joint environment, thereby realising flexible, network enabled capabilities. DCS designs, integrates and implements secure fixed, tactical, theatre and mobile information infrastructure solutions, including all of the services needed to support integrated mission systems and solutions. DCS is also a major designer and supplier of Command, Control, Communications and Intelligence (C3I) systems to the armed forces in France and Germany, and the Joint Staffs in France, Germany and NATO.

The business unit is focused on customers’ need for information infrastructure solutions. Its expertise includes a detailed understanding of the technology necessary to achieve this, including interfaces, gateways and the use of open system architectures.

Global security/Nationwide security. DCS provides fully integrated global security solutions and services in the areas of border security, maritime security, crisis and emergency management, critical infrastructure protection and large event protection. Due to the increased connections between different areas of threat and in light of the growing interdependence of internal and external security in particular, the seamless collaboration of different security organisations has become increasingly important. The DS division seeks to maximise efficiencies through the optimised use of data and information together and across these different security organisations. With the national security programme for the Kingdom of Saudi Arabia in 2009, DS won the largest contract ever awarded in this area.

Professional Mobile Radio. DCS is a leading provider of digital Professional Mobile Radio (“PMR”) and secure networks. DCS solutions for PMR enable professional organisations in various areas – such as public safety, civil defence, transport and industry – to communicate effectively, reliably and securely. DCS offers its customers specialised PMR solutions based on TETRAPOL, TETRA and P25 technologies, amongst others.

APSYS: Safety Engineering

APSYS is a DS division subsidiary and is managed by the DCS business unit. In 2009, APSYS strengthened its position in the French market for consulting, training and studies services in technical risk management. New expertise was developed to address specific markets and maintain the competitive edge of APSYS, such as software quality insurance, communication systems security, 3D phenomena modelling and transportation scheme performance analysis.

Dornier Consulting GmbH

Dornier Consulting GmbH is a DS division subsidiary and is managed by the DCS business unit. Dornier Consulting is a company for future-oriented transportation and technology consulting with a focus on traffic, transportation and logistic concepts, system specification and integration, modern technologies for the management of natural resources as well as professional full-service project management. It is an independent consulting and engineering company with clients in the public and private sector in Germany, Central and Eastern Europe, Central Asia and the Middle East. Major clients include national and international institutions (World Bank, UNDP, EU, KfW, GTZ), governments, authorities, the German Railways (Deutsche Bundesbahn), Daimler and EADS as well as a spectrum of private companies. As part of its future strategy, Dornier Consulting will seek to develop additional opportunities for other EADS units while also focusing on international growth.

Sofrelog

Sofrelog is a DS division subsidiary and is managed by the DCS business unit. Sofrelog provides integrated mission critical real-time systems using radar and other wide area sensors, mostly for maritime applications, typically vessel traffic services and coastal surveillance. These systems are based on Sofrelog's unique SYTAR™ product, which has set the technical standard in the maritime world: more than 450 radars have been connected, with Sofrelog having design responsibility on more than 50 control centres in 30 different countries around the world. Sofrelog is well positioned for growth in its core markets: building on the award of Qatar and Tanger Med port security in 2007, Sofrelog plans to further contribute to DS' global security growth.

Atlas Elektronik

Atlas Elektronik GmbH, headquartered in Bremen (Germany), is a joint venture of ThyssenKrupp (51%) and EADS (49%). In 2009, Atlas Elektronik achieved important successes, including the largest deal in its company history. With an order for equipping six South Korean submarines with a state of the art combat system, Atlas Elektronik reinforced its position as a global leader in submarine technology. In addition, the company took important steps to assert itself firmly in a market that – although growing – is characterised by increasing competition and cost pressures.

DEFENCE ELECTRONICS ("DE")

As the "Electronics House" of the DS division, DE provides mission-critical elements for data gathering, data processing and distribution for defence and civil security systems. Its main business is focused on high-end security electronic equipment and subsystems addressing the market for surveillance and reconnaissance, military mission management, protection of own forces and critical infrastructures, as well as testing systems and services.

In 2009, DE generated 18.6% of the DS division's total revenues.

Market

DE's main competitors in defence electronics are large and medium-sized US and European companies (*i.e.*, Raytheon, Northrop Grumman, Thales, BAE Systems, Galileo Avionica, Indra and Saab) as well as competitors from Israel. DE's key customers include MoDs, interior ministries, military services, security forces, the in-house EADS systems suppliers and other LSI's worldwide. Through various joint ventures, participations and partnerships, DE has access to customers in every NATO country, in particular in Germany, France, the UK, Spain and Italy, and to important export markets, such as the US, Turkey, India and South Africa.

Products and Services

Electronic Warfare and Self Defence. Growth in electronic warfare ("EW") and self-defence is a key strategic goal for DE. DE supplies electronic self-protection systems for aircraft, ships and armoured vehicles, such as laser warning, missile warning and active electronic countermeasure units, including directed infrared countermeasures, self-protection jammers and towed decoys. For example, DE delivers jammers to counter the increasing threat of roadside bombs. It has subsystem responsibility for the A400M's self-protection system, also supplying core EW equipment such as the infrared missile warning system MIRAS. For military mission aircraft, helicopters (NH90, Tiger) and VIP aircraft, DE is developing solutions to counter threats posed by infrared-guided missiles in particular. To date, DE has sold approximately 6,000 units of its missile warning sensor (MILDS), which is deployed on a variety of helicopters and transport aircraft.

Avionics. As a major partner in the field of military mission avionics for the A400M, DE assumes subsystem responsibility for mission management and defensive aids. The DE portfolio also comprises avionics equipment, such as digital map units (EuroGrid), flight data recording units and obstacle warning systems for helicopters. In addition, DE is developing multi-sensor integration and data fusion technology, which is a key future technology for network-enabled capabilities. For example, DE is in charge of sensor fusion software on the NATO AWACS E3A and the similar Australian "Wedgetail" and the Turkish "Peace Eagle" programmes. Additional products offered by DE in the field of communication and identification include wide-band modular data links.

Sensors. DE is a principal partner in the development of airborne multi-mode radars such as the Captor radar in the Eurofighter programme, and also provides integrated logistics support, maintenance and upgrades. DE is also heavily involved in the technological development and application of next-generation active electronically scanning (AESA) radars for air, naval and ground applications. In the field of fighter radars, DE successfully concluded two European AESA radar technology research programmes in 2009. In the area of air defence, DE produces mid-range radars for ship (TRS-3D) and land (TRML-3D) applications. DE also takes a lead role in developing and manufacturing synthetic aperture radars (SAR), which are considered essential for future reconnaissance and surveillance operations. In this field, DE has developed the European stand-off SAR sensor for wide-area surveillance (SOSTAR-X) and provides the Tandem-X space-borne Earth observation satellites with unique radar components.

With its newly developed Airport Surveillance Radar (ASR-S), DE won the competition in 2009 to provide Swiss military air fields with an advanced air traffic control system.

Test & Services. The Test & Services product range covers the entire life cycle of equipment and systems and includes comprehensive solutions that rely on test services and systems. The solutions are either integrated or sold as stand-alone elements: instrumentation, system software and application software. The versatility of Test & Services systems means that a multitude of equipment and systems can be tested. Accordingly, the same airline can use a single model test bench for maintaining both its Airbus and Boeing fleets, while the French Army uses the same test system for numerous weapon systems. Already present worldwide with its civil and military equipment testers, Test & Services is consolidating its development strategy on the international stage with new locations in France, Germany, Spain, the UK and the United States, as well as a global distribution network.

MILITARY AIR SYSTEMS ("MAS")

The MAS business unit specialises in the field of combat air systems — in particular development, production and delivery of the Eurofighter combat aircraft (46% owned by EADS). In addition, MAS produces and tests mission air systems, including UAVs. MAS offers corresponding product support, including maintenance, repair and overhaul, modernisation, logistics optimisation, product-specific training and integrated system support centres.

The new Military Air Systems Centre in Manching is fostering synergies with other parts of the DS division and reinforces customer relationships, especially with The Bundeswehr Technical and Airworthiness Center for Aircraft (WTD 61) and the German Air Force.

In 2009, MAS generated 37.6% of the DS division's total revenues.

Products and Services

Combat Air Systems. Eurofighter, known as "Typhoon" for export outside of Europe, is a network-enabled, extremely agile, high-performance multi-role combat aircraft optimised for swing-role operations in complex air-to-air and air-to-surface combat scenarios. Eurofighter is designed to enhance fleet efficiency through a single flying weapon system capable of fulfilling supersonic, beyond-visual-range combat, subsonic close-in air combat, air interdiction, air defence suppression and maritime and littoral attack roles. The tactical requirements of the aircraft include all-weather capability, short take-off and landing capability, high survivability and operational readiness. The Eurofighter was designed to be adapted and improved over the long-term, as new avionics and weapons evolve, to provide for an extended service life.

The Eurofighter programme is organised through the NATO Eurofighter and TORNADO Management Agency ("NETMA") for the participating nations. NETMA contracts with Eurofighter GmbH, the programme management company for the Eurofighter programme. The Eurofighter GmbH shareholders and subcontractors are EADS (46% share), BAE Systems (33% share) and Alenia Aerospazio, a division of Finmeccanica (21% share). With regard to series production, the respective production workshares of the participating partners within the Eurofighter consortium stand at 43% for EADS, 37.5% for BAE Systems and 19.5% for Alenia, reflecting the relative number of aircraft ordered by each country's programme participant. EADS is responsible for the centre fuselage, the flight control system, the manufacturing of the right wing and leading edge slats for all aircraft ordered under the programme, as well as the final assembly of the 180 aircraft ordered by the German Air Force and 87 aircraft ordered by the Spanish Air Force. The final assembly of the Eurofighter takes place in the relevant contracting country: Manching in Germany, Getafe in Spain, Warton in the UK and Torino in Italy.

In January 1998, NETMA signed an umbrella Eurofighter contract for 620 aircraft: UK 232 (with 65 options); Germany 180; Italy 121 (with 9 options); and Spain 87 (with 16 options). The umbrella contract, while fixing a maximum price for the overall programme, also stipulates that production agreements are to be awarded in three tranches, with production expected to continue until 2015. The programme includes the development, production investment and series production of the aircraft. Currently, 496 aircraft are firmly on order within the core programme.

Delivery of the first tranche of 148 aircraft (including six instrumented production aircraft) was completed in 2008 and final assembly of the second tranche of 236 aircraft is currently ramping up. Outside the core programme, Eurofighter completed its delivery of 15 aircraft sold to Austria (with 6 deliveries in 2009), and further export opportunities are believed to exist in Europe, Asia and the Far East. A government-to-government

1

2

3

4

5

Back to Contents

agreement has been reached between the UK and Saudi Arabia on the purchase of Eurofighter aircraft, marking the first export success of the aircraft outside Europe. The respective contract between the two governments regarding the delivery of 72 aircraft was signed in 2007. Delivery of the first Eurofighter aircraft for the Royal Saudi Air Force (RSAF) started in June 2009.

Mission Air Systems - Advanced UAV Systems. In response to Germany's need for wide-area surveillance and stand-off reconnaissance, MAS and its US partner Northrop Grumman are, through their joint venture EuroHawk GmbH, supplying it with the HALE-UAV System Euro Hawk. Euro Hawk is a high-altitude unmanned aerial system for signal intelligence (SIGINT) that has been specially equipped to meet national requirements. It is based on the Global Hawk RQ4-B platform developed by Northrop Grumman. MAS is responsible for the overall mission system including situation analysis and report, as well as sensor-payload and modifications. In October 2009, MAS and Northrop Grumman unveiled the first Euro Hawk in Palmdale, California. The German air force plans to start operational flying with the Euro Hawk FSD (First System Demonstrator) by 2011.

The European countries Germany, France and Spain have commissioned the programme "Advanced UAV" to analyse and more closely define the system needed to fulfil the requirements placed by the military customer for future unmanned surveillance and reconnaissance missions. The novel aspect of this approach is a modular system-of-systems design and the integration of the proposed TALARION MALE UAV in a network-enabled operations scenario. The three countries awarded a 15-month risk-reduction study in 2007 for high performance UAVs which was successfully delivered by MAS in May 2009. Harfang/SIDM (*Système Intérimaire de Drone MALE*) is a Medium Altitude Long Endurance (MALE) UAV system that has been developed for the French Air Force. Harfang – based on the IAI (Israel Aeronautic Industries) Eagle 1 platform – is a latest-generation system in the MALE category of UAVs and is dedicated to reconnaissance and tracking operations in the depth of the battlefield. The first SIDM systems were successfully delivered to the French customer in summer 2008 and were operated at a high rate in Afghanistan throughout 2009.

MAS is also working on the "Generic System Demonstrator Agile UAV in Network Centric Environment" (Agile UAV-NCE). It is a German Armed Forces' Research and Technology (R&T) programme aimed at demonstration of technologies and operational aspects with emphasis on network enabled operations. The major contribution from MAS is the Barracuda demonstrator UAV system – Europe's largest UAV ever built – which passed a week of successful test flights in Goose Bay, Canada in 2009.

Atlante is the long endurance tactical unmanned aerial vehicle that MAS provides to the Spanish customer. The unmanned aerial system is designed by MAS in Spain and will be operated

by the *Ejército de Tierra* to carry out target identification, shoot correction and damage evaluation operations, among other ISTAR missions (intelligence, surveillance, target acquisition and reconnaissance).

DRAC (*Drone de Renseignement Au Contact*) tactical UAV is based on the TRACKER, developed in partnership between MAS and SurveyCopter, which is providing the aerial vehicle and the cameras. After having delivered 25 DRAC systems to DGA, initial operator training was completed at the end of June 2008 paving the way for operational use of the system by the French Army. A second batch of 35 DRAC systems was ordered by DGA in June 2008 and delivered throughout 2009. In addition, a couple of systems were delivered to export customers.

Support Services and Upgrades. MAS offers its customers a full suite of services associated with operating their military air systems, including maintenance, repair and overhaul, modernisation, logistics optimisation, product-specific training and integrated system support centres.

In addition to these services, MAS offers its clients the possibility of upgrading their military air systems. If the purchase of new aircraft is either politically or economically unfeasible, conducting an upgrade of existing airframes is the most cost-effective solution. MAS has developed expertise in this area through upgrade programmes for such aircraft as the Tornado, F-4 Phantom, F-18, F-5, MiG-29, Mirage F-1, C101 Aviojet, Harrier AV-8B, E-3A AWACS, P-3C Orion, C-160 Transall and Breguet Atlantic 1.

Pilot Training and Training Aircraft and Services. MAS offers a pilot training programme for European fighter jets: in 2007, it launched the new European Advanced Training Jet Pilot School at Talavera together with the Spanish Air Force. The school provides comprehensive jet pilot training using an upgraded F-5 with near latest-generation combat aircraft performance characteristics and sophisticated ground equipment. Pursuant to a ten-year multi-services contract signed in 2006, MAS also manages "ab-initio" pilot training for future military aircrews at the French Air Force's flying school in Cognac. The Ecats (EADS Cognac Aviation Training Services) contract includes the procurement of new aircraft, line and base aircraft maintenance as well as ground-based training devices. In June 2009, Ecats celebrated its 50,000th flight hour.

Finally, MAS offers training for air defence crews. MAS develops, produces and maintains aerial target systems and coordinates aerial target services worldwide.

MISSILE SYSTEMS

MBDA (a joint venture between EADS, BAE Systems and Finmeccanica with stakes of 37.5%, 37.5% and 25% respectively) is the missile systems group within the DS division. MBDA offers

superior capabilities in missile systems and covers the whole range of solutions for air superiority, land control and sea power missions, while also providing the most advanced technological solutions in strike weapons and missile defence. The further integration of the four home markets (France, Germany, Italy and the UK), the consolidation of the business and increased efforts in the export market remain the principal goals for 2010.

In 2009, MBDA generated 17.8% of the DS division's total revenues.

Market

MBDA has a geographically diverse customer portfolio. Beyond its four national home markets, the Group has direct access to the other important European markets, Spain, Greece and Sweden. It also has a stable foothold in growing export markets such as Asia, the Gulf region and Latin America, and benefits from transatlantic cooperation on programmes such as MEADS, as discussed below.

Four principal defence contractors are active in the worldwide market for tactical missiles and missile systems. The current worldwide market for missile systems is estimated to exceed €12 billion, with a downward trend forecast until 2010/2011.

Thereafter, the worldwide market is nevertheless expected to strengthen due to:

- the need to replace older generation missile systems and to develop new capabilities (such as ground-based air defence systems, precision and deep strike weapons and naval superiority integrated combat systems);
- the entry into service of new missile carrying platforms (Rafale, Eurofighter/Typhoon, Gripen, Tiger helicopter, new frigates and aircraft carriers and in due course other new platforms such as the F-35 Lightning II Joint Strike Fighter and UCAVs); and
- the appearance of new requirements for future weapon systems based on new operational tasks and lessons learned from past conflicts, in particular Network Centric Warfare related systems as well as indirect line of sight or beyond visual range target acquisition systems.

Products and Services

The broad range of MBDA products covers all six principal missile system categories: air-to-air, air-to-surface, ground-to-air, surface-to-air, anti-ship and surface-to-surface. MBDA's product range also includes a portfolio of airborne countermeasures such as missile warning and decoying systems and decoy dispensers, airborne combat training and countermining systems. The most significant programmes currently under development are the Aster Paams naval air defence system, the METEOR air superiority missile system, the Medium Extended Air Defence

System MEADS and the Scalp NAVAL ship and submarine launched deep strike weapon, while those in production include Aster SAMP/T air defence, Storm Shadow/SCALP and Taurus stand-off missile systems.

Aster Family. The FSAF Phase 3 contract signed with OCCAR (*Organisation Conjointe de Coopération en matière d'Armement*) in 2003 is worth €3 billion (€2.3 billion thereof to be allocated to MBDA). This contract covers the series production of approximately 1,400 Aster missiles and associated missile systems and represents Europe's first advanced naval and ground-based air defence missile system with Anti-Tactical Ballistic Missiles (ATBM). Aster missiles are now in series production.

METEOR. METEOR is a highly flexible, visual and beyond visual range, agile, air-to-air weapon system that provides a comprehensive operational capability in the most complex combat scenarios. METEOR was ordered by the UK MoD and five other European nations (France, Germany, Italy, Spain and Sweden) to meet their future air-to-air requirements. In 2006, the first air-launched demonstration firings of METEOR were carried out. The test firing programme continued in 2007 and 2008 with a high altitude supersonic launch that successfully demonstrated the missile's integrated boost, ramjet sustain motor and control systems during extended free flight and manoeuvring.

Scalp NAVAL. Benefiting from the effort already invested in development of the Storm Shadow/SCALP European air-launched cruise missile programme, MBDA is developing Scalp NAVAL to provide the French Navy's FREMM frigates and Barracuda class submarines with superior deep strike capability. In 2007, MBDA received the contract notification from the French DGA for 250 of these missiles.

Storm Shadow/SCALP. Already in service in the UK, France and Italy, the Storm Shadow/SCALP was also selected by Greece in 2004. The Hellenic Air Force has ordered 34 Storm Shadow/Scalp missile systems. Deliveries have also been made to the UAE air force, where the missile is known as "Black Shaheen".

Taurus KEPD 350. MBDA Deutschland and SAAB Bofors are working together through Taurus Systems GmbH to create and deliver the Taurus KEPD 350, a precision stand-off guided missile system for Tornado, Gripen and Eurofighter aircraft. Taurus KEPD 350 is in series production for the German Air Force, with which the weapon is now in service. During 2007, the 300th Taurus missile left the production line in Schrobenhausen, marking the production halfway mark for the German Air Force. In 2005, Spain also announced its intention to procure 43 Taurus KEPD 350 missiles for its F/A-18 and Eurofighter aircraft, with the first two missiles delivered in 2007. In June 2009, the Spanish Air Force successfully integrated the Taurus KEPD 350 onto their EF-18 strike aircraft.

MEADS. MEADS (Medium Extended Air Defence System), a ground-based tactical air defence system, is a good example

1

2

3

4

5

Back to Contents

of dynamic and successful cooperation on a transatlantic level. MEADS will protect troops during out-of-area missions within the scope of homeland defence. The financial share of the programme is 58% US, 42% European (German and Italian). The technical workshare of the companies involved – MBDA Deutschland, MBDA Italia and Lockheed Martin (United States) – corresponds to the respective cost contribution percentages. MBDA's activities are coordinated through the joint venture company euroMeads GmbH, which, like Lockheed Martin, has a 50% share in MEADS International Inc. (MI). On 1 June 2005, MI formally signed a contract to design and develop MEADS. The contract value is approximately US\$ 2 billion plus €1.4 billion for the programme's design and development (D&D) phase.

PRODUCTION

The DS division operates several offices worldwide in order to secure close relationships with customers and partners. As the Division's portfolio also covers product development and consultancy services – mainly in the field of global security – DS has several facilities in the European home countries of Germany, France, Spain and the UK. The main production sites are located in Germany (Manching, Ulm) and Spain (Getafe).

1.1.6 Other Businesses

REGIONAL AIRCRAFT — ATR

ATR (*Avions de Transport Régional*) is a world leader in the market for regional turboprop aircraft of 40 to 74 seats. ATR Integrated is a consortium composed of EADS and Alenia Aeronautica, in which each hold a 50% stake. The EADS ATR business unit, which represents EADS' 50% share of ATR, is under the responsibility of Airbus. Headquartered in Blagnac near Toulouse in the south of France, ATR employs more than 800 people across Europe, with major operations in the Midi Pyrénées and Aquitaine regions of France.

Market

The regional turboprop aircraft industry has experienced growing concentration over the years. During the 1990s, a number of manufacturers merged, closed or ceased production of regional aircraft, leading to the withdrawal from the market of BAe, Beechcraft, Fokker, Saab and Shorts, among others. Currently, the worldwide market for turboprop aircraft of 40-70 seats in production is dominated by two manufacturers: ATR and Bombardier.

After a number of years of relatively low activity, the regional turboprop market has experienced sustained growth since 2005, due to the advantages of turboprop aircraft over jet aircraft in terms of fuel efficiency and CO₂ emissions. In the last five years, turboprops have received more orders than jets in the regional market and represented nearly 80% of total orders in the 40-70 seat segment according to internal estimates. In 2009, ATR delivered 54 new aircraft (compared to 55 in 2008) and recorded orders for 40 new aircraft (compared to 42 in 2008). In addition, 50% of the orders were booked for the newest member of the ATR family: the “-600 series” aircraft. As of 31 December 2009, ATR had a backlog of 136 aircraft (compared to 169 in 2008). The current backlog represents more than two years of deliveries.

The relative fuel efficiency and reduced CO₂ emissions of turboprop engines are expected to lead to sustained market activity over the coming years.

Products and Services

ATR 42 and ATR 72 Series Aircraft. Commencing with the ATR 42, which entered service in 1985, ATR has developed a family of high-wing, twin turboprop aircraft in the 40-74 passenger market that are designed for optimal efficiency, operational flexibility and comfort. In 1996, in order to respond to operators' increasing demands for comfort and performance, ATR launched the ATR 72-500 and ATR 42-500 series. Like Airbus, the ATR range is based on the family concept, which provides for savings in training, maintenance operations, spare parts supply and CCQ. In 2009, the ATR 72-600 pre-series aircraft started its flight test campaign, while the first ATR 42-600 was powered-on and began its ground tests. An entry into service is expected in 2011.

Customer Service. ATR has established a worldwide customer support organisation committed to supporting the aircraft over its service life. Service centres and spare parts stocks are located at Toulouse, in the vicinity of Washington D.C. and in Singapore.

ATR Asset Management also responds to the market for second-hand aircraft by assisting in the placement and financing of used and end-of-lease aircraft. By providing quality reconditioned aircraft at attractive prices, ATR Asset Management has helped both to broaden ATR's customer base, in particular in emerging markets, and to maintain the residual values of used aircraft. In the past, clients for such used aircraft have subsequently purchased new aircraft as they have gained experience in the operation of ATR turboprops. Returned aircraft generally remain out of service for approximately five months as they await reconditioning and resale or leasing, subject to market conditions.

Production

The ATR production facilities are located near Naples, Italy and at Merignac, Bordeaux and Saint-Martin near the Toulouse airport in France. Final assembly, flight-testing, certification and delivery occurs at the Toulouse site. ATR outsources certain areas of responsibility to Airbus, such as wing design and manufacture, flight-testing and information technology.

AEROSTRUCTURES, AIRCRAFT CONVERSION AND FLOOR PANELS

EADS Sogerma

EADS Sogerma is a wholly owned subsidiary of EADS which is specialised in aerostructures and cabin interior activities. The company designs and manufactures major aerostructure elements in metal and composite for commercial and military aircraft and is also a leading provider of cockpit and passenger seats (first and business class) for commercial and military aircraft as well as for business jets and helicopters.

In the aerostructures field, EADS Sogerma engages in the design, manufacturing and assembly of Airbus aircraft sections (A318/A320/A330/A340), manufacturing and assembly of ATR wings, design and manufacturing of the A400M ramp door as well as design and manufacturing of pilot and co-pilot seats. In the cabin interior segment, EADS Sogerma designs and manufactures first and business class seats for large commercial aircraft.

EADS Sogerma owns three sites in France (Rochefort, Bordeaux and Toulouse) and benefits from a low cost subsidiary in Morocco (Maroc Aviation) as well as two subsidiaries specialised in composites: CAQ (Composite Aquitaine) in France and CAL (Composite Atlantic) in Canada.

EADS Elbe Flugzeugwerke GmbH — EFW

EFW is a wholly owned subsidiary of EADS (consolidated within Airbus) and a core centre for Airbus passenger to freighter conversion, a centre of excellence for the manufacture of fibre-reinforced furnishing components as well as an important partner for special programmes such as the conversion of the MRTT.

The conversion of passenger aircraft into freighter aircraft is a common heavy modification undertaken on behalf of commercial aircraft owners. The market for aircraft freighter conversion encompasses freight service airlines such as FedEx, airlines with small aircraft fleets and finance groups. In the aerostructures field, EFW is the supplier of fibre reinforced flat sandwich panels for all Airbus models. Its product range covers floor and ceiling panels, cargo linings and bullet-proof cockpit doors. EFW's engineering department is a certified design organisation that works to develop future products.

Aerolia

Aerolia is a wholly owned subsidiary of EADS (consolidated within Airbus) which was formed from the spin-off of the former French Airbus sites in Méaulte and St-Nazaire Ville pursuant to the aerostructures reorganisation strategy initiated under Power8. Having commenced operations as of 1 January 2009, Aerolia has 2,200 employees who work on the design and manufacture of 4 million detail parts and 500 work packages of the Airbus nose fuselage. The standalone company operates with four operational Directorates (Engineering, Operations, Procurement, Programmes & Commercial) and four support Directorates (Quality, Finances, Human Resources, Strategy & Communications), which are geographically located on three sites: Méaulte, St-Nazaire and Toulouse. In 2009, a fourth site was launched in Tunisia. The design office, based in Toulouse, combines the skills of approximately 250 engineers and employees, coming for the most part from the Airbus design offices.

The activities integrated in Aerolia will maintain and develop commercial and industrial relations mainly with Airbus, while continuing to develop relations with others such as Bombardier, ATR, Latecoere, Sonaca, Sogerma, Stork Fokker, Piaggio, SAAB and SABCA.

Premium AEROTEC

Premium AEROTEC is a wholly owned subsidiary of EADS (consolidated within Airbus) which was formed from the spin-off of the former German Airbus sites in Nordenham and Varel and the former EADS site in Augsburg pursuant to the aerostructures reorganisation strategy initiated under Power8. Premium AEROTEC has its own development unit with its main facilities at its Augsburg site and offices in Bremen, Hamburg, Munich/Ottobrunn and Manching. The management headquarters for the operational units are in Varel, while the company itself is headquartered in Augsburg.

Having commenced operations as of 1 January 2009, the core business of Premium AEROTEC is focused on structures and manufacturing systems for aircraft construction and related development activities. The aim of Premium AEROTEC over the coming years is to further expand its position as the leading tier 1 supplier of civil and military aircraft structures.

Premium AEROTEC is a partner in all major European aircraft development programmes, such as the commercial Airbus aircraft families, the A400M military transport aircraft programme and the Eurofighter Typhoon. It plays a significant role in the design of new concepts in such fields as carbon composite technologies.

1.1.7 Investments

DASSAULT AVIATION

EADS holds a 46.3% stake in Dassault Aviation (listed on the Eurolist of Euronext Paris), with Groupe Industriel Marcel Dassault holding a 50.6% stake and a free float of 3.1%.

Dassault Aviation is a leader in the world market for military jet aircraft and business jets. Founded in 1945, Dassault Aviation has delivered more than 7,300 military and civil aircraft to purchasers in more than 70 countries. On the basis of its experience as designer and industrial architect of complex systems, Dassault Aviation designs, develops and produces a wide range of military aircraft and business jets. In order to avoid any potential conflict between the military products of Dassault Aviation and EADS (Rafale and Eurofighter) and to facilitate a “Chinese wall” approach, EADS’ Dassault Aviation shareholding is managed by EADS Corporate, whereas the Eurofighter programme is managed by EADS’ Defence & Security division.

In 2009, Dassault Aviation recorded orders totalling €-1.3 billion (compared to €5.8 billion in 2008), including cancellation of 163 orders for Falcon business jets (compared to 115 new orders in 2008). Consolidated revenues amounted to €3.4 billion in 2009 (compared to €3.7 billion in 2008), with consolidated net income of €257 million (compared to €384 million in 2008).

Military Jet Aircraft

Dassault Aviation offers wide expertise in the design and manufacture of the latest generation military combat aircraft.

Rafale. The Rafale is a twin-engine, omni-role combat aircraft developed for both air force and navy applications. According to decisions made based on the *Livre Blanc* of the French MoD, France will be acquiring 286 Rafale, 228 for the air force and 58 for the navy, for a total programme cost of €39.6 billion. 180 aircraft have already been ordered; of these, 133 are reserved for the air force, and 47 for the navy.

Mirage 2000. The Mirage 2000 family reached the end of its production phase in 2006. Today, approximately 600 Mirage 2000 aircraft are in service worldwide.

nEUROn. Dassault Aviation is the prime contractor for the development of the UCAV (Unmanned Combat Air Vehicle) demonstrator, nEUROn. The programme was open to European cooperation and five countries have decided to join in and share the skills of their aerospace industries: EADS CASA (Spain), SAAB (Sweden), HAI (Greece), RUAG (Switzerland) and Alenia Aeronautica (Italy). The nEUROn demonstrator is scheduled to fly in mid-2012.

Business Jets

Dassault Aviation offers a wide range of products at the top end of the business jet sector. Over 1,700 Falcon business jets have been delivered since the first Falcon 20 delivery in 1965. In-service Falcons currently operate in over 65 countries worldwide, filling corporate, VIP and government transportation roles. The family of Falcon jets currently includes four tri-jets: the Falcon 50EX, 900C, 900EX and 7X, the twin-engine Falcon 2000 and the Falcon 2000EX EASy.

DAHER-SOCATA

In January 2009, EADS sold a 70% stake in Socata to Daher, while retaining the remaining 30% stake.

DAHER-SOCATA specialises in the aerospace, nuclear, defence and industry sectors and offers manufacturing and services solutions combining three areas of expertise (manufacturing, services and transport) built into a global offer. In aerospace and defence, DAHER-SOCATA is both a manufacturer and a tier-1 supplier of equipment and services, producing aerostructures and systems, fitted sections and airframes. In the under 8.6-ton category, it produces aircraft with options dedicated to the civil (business aircraft) and military (multi-role aircraft) markets.

1.1.8 Insurance

EADS Corporate Insurance Risk Management (“IRM”), centralised at EADS headquarters, is responsible for all corporate insurance activities and related protection for the Group. It includes continuous and consistent identification, evaluation, prevention and protection of insurable risks. Insurance techniques are used to manage these risks professionally and to protect the assets and liabilities of EADS against financial

consequences due to unexpected events. Harmonised insurance policies and standards are in place for all insurable risks underwritten by the Group.

An integrated reporting and information system is in place to enable IRM, in close relationship with insurance managers named by the EADS divisions and business units, to respond to

insurance related risks of the Group. EADS pursues an insurance risk management strategy that includes operating procedures as well as policies regarding procurement and sales agreements.

A systematic review and monitoring procedure is in place to assess the exposure and protection systems applicable to all EADS sites, helping to ensure (i) comprehensive and timely identification and evaluation of risks, (ii) the initiation of appropriate mitigation and risk avoidance measures (iii) and/or related adjustments of insurance coverage.

EADS' insurance programmes cover high risk (Core) and low risk (Non-Core) exposure.

Core insurance policies underwritten by IRM for the Group cover risks such as:

- Property Damage and Business Interruption;
- Aviation Third Party Liabilities including Product Liabilities;
- Manufacturer's Aviation Hull Insurance up to the replacement value of each aircraft;
- Space Third Party Liabilities including Product Liabilities;
- Commercial General Liabilities including non-aviation and non-space Product Liabilities and risks related to environmental accidents; and
- Directors & Officers Liability.

Claims related to Property Damage and Business Interruption are covered up to a limit of €2.5 billion per occurrence. Aviation Liability Coverage is provided up to a limit of €2.5 billion per occurrence, with an annual aggregate cap of €2.5 billion for product liability claims. Certain sub-limits are applicable for Core Insurance Policies as outlined above.

Non-Core Insurance Policies cover risks such as:

- Personal Accidents;
- Company Automobiles; and
- Personal and property exposure during business trips.

Amounts insured for Non Core Insurance Lines adequately cover the respective exposure.

EADS follows a policy of obtaining external insurance coverage for all main and individual risks that can be insured at reasonable rates, on sufficient terms and limits provided by the international insurance markets. All insurance policies are required to satisfy EADS' mandatory standards of insurance protection.

However, to be more independent from the volatilities of the insurance markets, EADS uses the capabilities of a corporate-owned reinsurance captive as a strategic tool with respect to the Property Damage, Business Interruption Programme and the Aviation Insurance Programme. The captive is capitalised and protected according to European legal requirements so as to help ensure its ability to reimburse claims, without limiting the scope of coverage of the original insurance policies or additionally exposing the financial assets of EADS.

The insurance industry, which has been affected by the recent financial crisis, is still undertaking efforts to reduce its overall exposure. These efforts include increasing premiums, raising deductible amounts and limiting the scope of coverage. Furthermore, the number of insurers having the capabilities and financial strength to underwrite large industrial risks is limited. No assurance can be given that EADS will be able to maintain its current levels of coverage on similar financial terms in the future.

1.1.9 Legal and Arbitration Proceedings

EADS is involved from time to time in various legal and arbitration proceedings in the ordinary course of its business, the most significant of which are described below. Other than as described below, EADS is not aware of any governmental, legal or arbitration proceedings (including any such proceedings which are pending or threatened), during a period covering at least the previous twelve months which may have, or have had in the recent past significant effects on EADS' or the Group's financial position or profitability.

In 2005, a liquidator representing the special purpose vehicle GFAC (a joint venture between Swissair and GATX) sued Airbus before a New York court to recover USD 227 million in pre-delivery payments, together with interest and costs. The lawsuit followed Airbus' termination of a purchase agreement with GFAC in October 2001 for 38 single-aisle and long-range aircraft, in the context of Swissair's bankruptcy. On 6 February 2009, a judge rendered a summary judgment in favour of GFAC. In March 2009, GFAC submitted arguments on the amount of its alleged damages and requested entry of judgment. In parallel,

Airbus has filed an appeal of the February 2009 decision, which was heard by the appellate court on 17 September 2009. Both plaintiff's request and defendant's appeal are currently pending, with the risk that Airbus may ultimately be required to pay an amount equal to the pre-delivery payments plus legal interest as damages.

In 2006, a liquidator representing the special purpose vehicle FlightLease No. 7 (a wholly-owned subsidiary of the bankrupt Swissair Group) sued Airbus before a Paris court to recover USD 319 million in pre-delivery payments, together with interest and costs. The lawsuit followed Airbus' termination of a purchase agreement with FlightLease No. 7 in October 2001, in the context of Swissair's bankruptcy. The case is at an early procedural stage.

Although EADS is not a party, EADS is supporting the European Commission in litigation before the WTO. Following its unilateral withdrawal from the 1992 EU-US Agreement on Trade in Large Civil Aircraft, the US lodged a request on 6 October 2004 to initiate proceedings before the WTO. On the same day, the EU launched a parallel WTO case against the US in relation to its subsidies to Boeing. On 31 May 2005, the US and the EU each requested the establishment of a panel. At its meeting on 20 July 2005, the Dispute Settlement Body established the panels. Between November 2005 and the present, the parties filed numerous written submissions and attended several oral hearings in both cases. On 23 March 2010, a non-binding confidential report was issued in the case brought by the US. The decision will be released publicly in the second quarter of 2010, and will likely be appealed by both sides. A draft decision in the case brought by the EU concerning subsidies to Boeing is expected in June 2010. Exact timing of further steps in the WTO litigation process is subject to ruling of the panels and to negotiations between the US and the EU. Unless a settlement, which is currently not under discussion, is reached between the parties, the litigation is expected to continue for several years.

The French *Autorité des marchés financiers* (the "AMF") began investigations in 2006 for alleged breaches of market regulations and insider trading rules with respect to, among other things, the A380 delays announced in 2006. On 1 April 2008, the AMF announced the notification of charges against EADS and certain of its current and former executives for breach of such market regulations and insider trading rules, respectively. On 22 July 2009, the *Rapporteur* of the Sanction Commission of the AMF issued a report regarding the charges notified by the AMF, which contained various recommendations to the Sanction Commission on the merits of the charges. Following oral hearings before the Sanction Commission which took place from 23-27 November 2009, the Sanction Commission decided, in a decision published on 17 December 2009, to dismiss all charges against EADS and the other notified persons. The Sanction Commission held that EADS had complied with all applicable

market information duties, in particular in respect of risk of delays affecting the A380 programme and its development, and that there had been no breach of insider trading rules. Following criminal complaints filed by a shareholders' association and by an individual shareholder (including a civil claim for damages), a French investigating judge is still carrying out an investigation on the same facts.

In Germany, criminal proceedings regarding suspected insider trading offences have not established any wrongdoing and are meanwhile mostly terminated. Furthermore, in Germany, several shareholders have filed civil actions against EADS since 2006 to recover their alleged losses in connection with the disclosure of A380 programme delays. Several plaintiffs have filed motions for "model proceedings", which would allow common issues of fact or law in multiple individual securities actions to be decided together with binding effect in all such actions. The proceedings are in their preliminary stage and the amounts claimed are relatively small.

On 12 June 2008, two actions were initiated in the United States District Court for the Southern District of New York, one of which has since been voluntarily withdrawn. The remaining action purports to be a class action brought on behalf of all persons and entities residing in the United States who purchased or otherwise acquired EADS' common stock during the period from 27 July 2005 through 9 March 2007. Named as defendants are EADS and four current or former executives of EADS and Airbus. The action seeks damages in an unspecified amount, with interest and attorneys' fees, for alleged violations of the US securities laws in connection with financial disclosures issued by EADS in 2005, 2006 and 2007 and public statements made during that same time frame relating to A380 programme delays. On 26 March 2010, the Court granted defendants' motion to dismiss for lack of subject matter jurisdiction.

On 9 September 2009 and 4 December 2009, respectively, two separate requests were filed by institutional shareholders with the Enterprise Chamber (*Ondernemingskamer*) of the Court of Appeal in Amsterdam to open an inquiry into the management and affairs of EADS. The applicants allege in their requests that there are serious reasons to doubt proper management by EADS, primarily with respect to the A380 programme delays announced in 2006 and the related disclosures to the market. A hearing on the requests was held on 28 January 2010 before the Enterprise Court, with a decision currently pending.

Following an investigation conducted by the Italian *Guardia di Finanza*, Italian tax authorities are currently evaluating whether Astrium owes any overdue tax in Italy related to its past contractual relationships. In parallel, the Italian Public Prosecutor decided at the end of December 2009 to initiate proceedings against Astrium's legal representatives for failure to file a tax declaration and attempted fraud.

On 10 November 2009, Airbus Military SL (AMSL) notified Europrop International GmbH (EPI), the engine manufacturer under the A400M aircraft programme, that it had a number of contractual claims against it for breach of Milestones 7, 8 and 9 under the engine agreement, in an amount currently totalling approximately €500 million. On 8 February 2010, EPI notified AMSL of its own claims under the engine agreement, in an amount totalling approximately €425 million, and on 23 February 2010, EPI sent notice of its intent to seek arbitration, and of its sending of a request for arbitration to the International Chamber of Commerce (ICC) on the same day. AMSL will respond to EPI's claims in the light of the overall claims and position under the A400M programme.

Regarding EADS' provisions policy, EADS recognises provisions for litigation and claims when (i) it has a present obligation from legal actions, governmental investigations, proceedings and other claims resulting from past events that are pending or may be instituted or asserted in the future against the Group, (ii) it is probable that an outflow of resources embodying economic benefits will be required to settle such obligation and (iii) a reliable estimate of the amount of such obligation can be made. EADS believes that it has made adequate provisions to cover current or contemplated general and specific litigation risks. For the amount of provisions for litigation and claims, see "Notes to the Consolidated Financial Statements (IFRS) — Note 26C. Other provisions".

1.1.10 Research and Technology, Intellectual Property

RESEARCH AND TECHNOLOGY

In 2009, the EADS Corporate Technical Office continued to pursue many measures needed to achieve the research and technology ("R&T") goals associated with Vision 2020. These included pursuing roadmaps for key technologies, continuing a group-wide "green" technologies group, increasing efforts to recruit sufficient engineering talent and further improving R&T management.

EADS has an R&T leadership team across the Divisions, implementing a streamlined approach to capture synergies. For example, EADS Innovation Works, the research arm of the Group, and the DS division now operate a common research facility in Newport, Wales (UK).

Management focuses R&T spending on a number of larger projects, thereby ensuring more concentrated investment of R&T funds in strategic directions. To maximise the resources of the R&T budget, EADS continued to increase its contracting activities with European governments. In addition, R&T operations targets are to increase efficiency by approximately 10% and to reinvest the proceeds in technology development.

Global R&T collaboration continued to grow outside Europe in order to access a diverse pool of scientific and engineering expertise. Partnerships with leading research institutes expanded in Canada, India, Russia, Singapore, China and the United States.

Across EADS, 2009 was a significant year for technology development, with notable innovations ranging from civil aircraft fuel cell research, to synthetic fuel testing, low emission diesel helicopter propulsion and technologies for public security.

Corporate Technical Office Organisation

The Chief Technical Officer's ("CTO") mission is to be the R&T focal point for the entire Group. The CTO ensures that business strategy and technology strategy are closely linked. He is responsible for the development of design and manufacturing tools and innovation across EADS. The CTO is a member of the EADS Executive Committee and has responsibility for the entire R&T budget and R&T production within EADS. The CTO seeks to deliver shareholder value through a disciplined, leading-edge R&T portfolio that enables the introduction of new technologies on future products with strong returns-on-investment. The CTO also aims at maximising customer satisfaction by providing high-value solutions that meet technological, performance, safety and cost-competitive requirements. In addition, the CTO addresses broader public concerns with solutions that encompass safety, security, environmental compatibility and energy efficiency.

The EADS Executive Technical Council ("ETC"), chaired by the CTO, is made up of the technical directors of each division. The ETC is responsible for ensuring alignment with the Group's technology strategy and implementation through the Group R&T road map. The ETC ensures that a balance is maintained between the top-down strategic guidance and bottom-up activities.

Group Innovation Networks and their leaders in the CTO's team report to the Chief Operating Officer Innovation to ensure that R&T synergies are exploited throughout EADS divisions and EADS Innovation Works. The COO Innovation is chairperson of the R&T Council (RTC), which is made up of the R&T directors of the Divisions and business units, and the head of EADS Innovation Works.

The CTO steers the EADS-wide harmonisation of transversal technical processes, methods and tools, and skills development programmes, such as systems engineering, common tools for product life-cycle management (PLM/Phenix) and systems

1

2

3

4

5

Back to Contents

engineering training and qualification. The CTO team also carries out technical assessments on behalf of the CEO and the EADS Executive Committee.

The head of EADS Innovation Works reports to the CTO. EADS Innovation Works manages the corporate R&T production that develops the Group's technical innovation potential. Driven by the EADS R&T strategy, EADS Innovation Works seeks to identify new technologies that will create long-term innovation value for the Group. EADS Innovation Works operates two main sites near Munich and Paris and employs approximately 700 people including doctorates and university interns. Proximity centres are maintained in Toulouse, Nantes, Hamburg and Stade to support knowledge transfer to business units. A liaison office operates in Moscow, which coordinates relations with leading Russian scientific institutes. EADS operates R&T centres in the UK, Spain and Singapore, and established a presence in India in 2009 through the opening of EADS Innovation Works India in Bangalore. The new centre, which is located within Airbus' Indian engineering centre, will look at developing software and also develop technology for homeland security.

EADS Innovation Works and the EADS R&T community in the Divisions maintain and continually grow partnerships with leading universities and high-tech engineering schools through employment of thesis students, post-graduate interns and doctorates, and through research contracts.

Performance and Best Practices

The R&T Strategic Approach

Strategic obligations for EADS include the development of core competencies and technologies for platform and platform-based systems architecture and integration. In parallel, EADS strives to keep the innovation pipeline flowing in order to replace ageing technologies and processes.

Building on the identification, evaluation and clear prioritisation of critical technologies for the Group, EADS is shaping a technological policy that strengthens group synergies and is aimed at maintaining and when needed, increasing EADS R&T efforts. Each division is responsible for proposing its own targets, and for securing public and private R&T funding.

The EADS R&T strategy is driven by:

- Shareholder value: a stringent, leading-edge R&T portfolio that seeks to enable seamless introduction of new technology on future products and a strong return-on-investment;
- Customer satisfaction: high-value solutions that meet the technological, performance, safety and cost-competitive pressures that challenge the future;

- Upstream contribution to successful on-time, on-quality, on-price introduction of new products and processes;
- Technology leadership to fuel business growth; and
- Societal responsibility: R&T solutions that contribute to mobility, environmental protection, safety and security requirements.

R&T Production and Management

EADS R&T activities cover a wide spectrum of technological domains, are targeted at different levels of the value chain, and are structured according to the timelines of short-term committed programmes, medium-term optional programmes and long-term advanced concepts for the introduction of new technologies into the company's product and manufacturing pipeline:

R&T for Advanced Concepts – Integrated Demonstrators Technological/Operational Studies

All EADS divisions work to generate new product concepts in line with the R&T strategy to maximise future business potential. These concepts explore and generate new ideas, while pushing the limits of what is technically possible currently.

The portfolio is currently focused around four growth axes: Mobility (*e.g.* air traffic management), Environmental Protection (*e.g.* energy solutions, optimised platforms), Defence, Safety and Security (*e.g.* illicit materials detection and aircraft communications protection), and Services.

EADS Corporate Foundation for Research

Created in 2004, the EADS Research Foundation's ambition is to develop ties between the public sector research communities and the aeronautics and space industrial and technical communities.

The EADS Research Foundation also participates as a founder or donor in other public interest foundations and associations. Over the past five years, the EADS Research Foundation has sponsored 75 research programmes, created six research and teaching chairs and honoured 69 researchers. The EADS Research Foundation supports 10 upstream original frontier research projects conducted by public research organisations.

One of the EADS Research Foundation's goals is to build ties between the public research community and the education sectors. To this end, each year it honours excellence in the research field by scientists who achieve milestones in their research work in collaboration with the industrial sector. It also hands out annually six "Best Thesis" awards in mathematics, engineering sciences, earth sciences, physics, information technologies and interdisciplinary disciplines.

The EADS Research Foundation supports other organisations with which it shares common objectives, namely the French

Aeronautics and Space Research Foundation, the Institute for Higher Scientific Studies (IHES), which is dedicated to advanced research in mathematics and theoretical physics, and the C. Génial Foundation, which helps to increase scientific and technical interest, particularly among young people. Through this latest effort, the EADS Research Foundation supports the “Science in Schools” initiative, aimed at creating a new image for teaching science in middle schools, grammar schools and foundation courses.

Bauhaus Luftfahrt (an Aviation Research Think Tank)

EADS and the government of the German state of Bavaria have joined forces with two other German aerospace companies to fund Bauhaus Luftfahrt, a think tank for creative and interdisciplinary research activities in the field of aeronautics. Bauhaus Luftfahrt enables EADS to consider new, groundbreaking research in the field of aeronautics by adopting an innovative approach to future-oriented, visionary solutions.

Competence Management

In 2005, EADS implemented an expert policy in order to identify and promote employees mastering the Group’s critical technical capabilities. Experts are indeed a cornerstone of EADS’ policy to reinforce its technological leadership. About 1,150 experts, senior and executive experts from EADS’ divisions and covering all technical fields contribute to:

- supporting customers with complex problem solving;
- implementing innovations into new products and services;
- increasing and sharing technical knowledge; and
- securing intellectual property.

Recognising Talent as a Strategic Human Capital

The EADS Hall of Fame was instituted by the CTO together with the Head of Human Resources, with the objective of encouraging innovation within EADS, sharing best practices, promoting intellectual property and instilling pride and recognition among the EADS workforce by recognising and honouring employees who have made outstanding contributions to the Company.

In November 2007 and September 2009, EADS hosted Hall of Fame ceremonies, which awarded prizes to employees from across the Group. There were four categories of awards: the best inventors, for those who develop and patent new technological inventions; the best innovators, for those who implement innovative projects which generate a significant revenue increase or competitive advantage; the craftsmen, for those who possess unique skills that give the company a valuable competitive advantage; and a “Special Prize” to a team, in order to recognise the best improvement initiatives to generate savings, to deliver

on time or to increase quality (in 2007 and 2009: the “Best Lean Manufacturing Team”).

PROTECTING INNOVATION: INTELLECTUAL PROPERTY

Intellectual Property (“IP”), including patents, trademarks, copyrights and know-how, plays an important role in the production and protection of EADS’ technologies and products. The use of IP rights enables EADS to remain competitive in the market and to manufacture and sell its products freely, and to prevent competitors from exploiting protected technologies. It is EADS’ policy to establish, protect, maintain and defend its rights in all commercially significant IP and to use those rights in responsible ways.

Organisation

The general management of IP in EADS is conducted through an IP Council led by the EADS Chief IP Counsel. Executives responsible for IP at the main subsidiaries sit on this council.

Each of the subsidiary companies of the Group owns the IP which is specific to its particular business and has been generated by this subsidiary. Where IP is of common interest throughout the Group, the subsidiary that generated it may issue a licence allowing its use elsewhere (respecting the interests of the other shareholders when appropriate). EADS also owns IP directly or under licence agreements with its subsidiaries. EADS centralises and coordinates the Group’s IP portfolio, participates with the subsidiaries in its management and promotes licensing of common IP between the subsidiaries. EADS controls the protection of its IP made in the strategic countries.

Performance and Best Practices

To increase the added value of the Group, the EADS CTO team promotes sharing within the Group of all the knowledge of the business units and the sharing of resources, skills, research and budget to develop new knowledge, while respecting existing contractual and legal frameworks. For example, all of the contracts between business units of the Group concerning shared R&T must have provisions allowing for the flow of knowledge (EADS R&T network rules).

In 2009, the EADS IP portfolio comprised approximately 8,000 inventions (approximately 7,000 in 2008), which are covered by more than 29,000 patents throughout the world. The number of patents filed during 2009 gives a good indication of the greater momentum in R&T and product development: 1,073 patents were filed in 2009.

For international patent protection, EADS uses the Patent Cooperation Treaty, which provides a simplified system for international patent filing. In 2009, 564 international applications were published for EADS and its divisions according to World Intellectual Property Organization’s annual report.

	2009	2008	2007
New inventions filed by EADS (some of which covered by several patents)	1,073	1,088	957
EADS patent portfolio (year end)	29,123	25,665	20,653

In 2009, EADS launched a technology licensing initiative. EADS Technology Licensing provides access to a wide range of technologies that are available to help companies outside the Group to develop new products, improve production methods

and expand their market opportunities. EADS Technology Licensing seeks to generate revenues by exploiting EADS' large patent portfolio and related know-how.

1.1.11 Environmental Protection

Protection of the environment is a global priority that requires engagement and responsibility by citizens, politicians and industry, often working in partnership. A key focus for EADS is the fulfilment of its mission to provide individual mobility, communication and security, which are the essence of our modern societies.

Eco-efficiency is a major goal of the Company's "Vision 2020" strategic roadmap. It aims at maximising the benefits of EADS' products and services to its customers and other stakeholders while minimising the environmental impact of manufacturing and operating these products throughout their life cycle.

Therefore, the pursuit of further innovative and eco-efficient technologies and processes is a key factor in helping to ensure the Company's sustainability, increase the attractiveness of its products and its overall competitiveness, benefit growth, safeguard employment and create added value for all stakeholders.

ORGANISATION

While each EADS division, business unit, entity and corporate function remains fully responsible and accountable for the operational implementation of the EADS environmental policy in pursuit of eco-efficiency, the consistency of the various initiatives is ensured through an overall Group-wide coordination provided by the EADS Environmental Network. This network is composed of representatives of the main business areas and placed under the responsibility of the Corporate Secretary.

The mission of the Environmental Network is to seek continuous improvement of EADS' environmental performance, to promote sharing of best practices, to monitor opportunities and risks and to anticipate regulatory changes. Sub-working groups on specific topics that are important to the Company have been established in areas such as Climate Change/Energy, Environmental Reporting, "REACH" and Hazardous Substances, Design for Environment/Life Cycle Practices. Corporate objectives are periodically reviewed at various levels thanks to a set of indicators and advanced reporting tools and processes, within the

framework of the corporate Environmental Management Systems ("EMS") that are currently being implemented.

EADS strives to develop joint initiatives within the industry in order to improve the overall environmental performance of the sector in the most effective, consistent and cost-efficient way. EADS is already leading or participating in various European and international sector environment-related committees or working groups such as:

- ✦ ICCAIA (International Coordinating Council of Aerospace Industries Associations — Aircraft Noise & Engine Emissions Environment Committee: Vice-Chaired by Airbus);
- ✦ ASD (REACH Working Groups Chairmanships).

EADS also participates in the environmental working groups of national industry organisations such as the GIFAS in France, TEDAE in Spain, BDLI in Germany and ADS in the UK. Cooperation has also been initiated with AIA (Aerospace Industries Association of Americas) and SAE to develop appropriate standards to facilitate the supply chain's compliance with the REACH regulation (the EU regulation which addresses the production and use of chemical substances) and other emerging requirements.

PERFORMANCE AND BEST PRACTICES

EADS strives to continuously improve the environmental performance not only of its facilities but also of its products throughout their life cycle, from design to end of life. EADS aspires to make the environment a true driver for cultural change and relevant value creation for the Company.

While promoting an environmentally friendly culture and eco-efficient behaviour within the Company, EADS also pursues several research efforts to ensure the cleanest and greenest technologies and products are constantly proposed to its customers, in line with a recently established Corporate Environmental Roadmap.

EADS ENVIRONMENTAL ROADMAP TOWARDS ECO-EFFICIENCY

EADS is committed to moving towards an eco-efficient enterprise. In order to substantiate this vision through an effective series of concrete projects and actions, a Corporate Environmental Roadmap has been established. Established at each business unit, it provides a general framework and timeline of aggressive management, operational and product-oriented performance goals to be achieved by 2020, including in particular:

Environmental management goals:

- Full EADS coverage with ISO 14001 with a life cycle orientation and a single corporate certification; and
- Integration of eco-efficiency within the development of any new product or technology as well as in the supply chain.

Performance operational goals:

- 80% reduction of water discharge;
- 50% reduction of waste, water consumption, CO₂ and VOC emissions;
- 30% reduction of energy consumption;
- 20% of energy from renewable sources;
- Pursuing ACARE (Advisory Council for Aeronautics Research in Europe) research goals for Aviation and the various defined goals for other products portfolio; and
- Developing eco-efficient solutions for core and adjacent customer segments, which provide sustainable value creation for the Company.

ENVIRONMENTAL MANAGEMENT ISO 14001/EMAS

EADS encourages not only the environmental certification of its operations but also the development of a full life cycle orientation, as this remains the most cost-efficient and practical way to effectively reduce the environmental impact. Robust certified EMS have been already progressively implemented across EADS manufacturing sites, with the objective to achieve full coverage of EADS and a single corporate certification against ISO 14001.

Implementing an EADS group-wide EMS allows the Company to facilitate its path to eco-efficiency. As of 31 December 2009, 85 sites representing approximately 90% of EADS' total workforce now operates according to a certified ISO 14001 (or registered EMAS) EMS.

The Site and Product oriented EMS, as established by Airbus since 2006, has been expanded to US and China locations and

will be further continued. Life cycle oriented EMS allows to set the appropriate actions to efficiently minimise the environmental impacts where it makes sense in the life cycle.

Monitoring of the various achievements against objectives is being performed through the collection of a carefully chosen set of indicators. Consistency and reliability of the reporting exercise is being ensured through corporate procedure and guidelines derived from GRI requirements combined with an advanced Environmental Management Information System (ENABLON) that is fully operational within EADS worldwide.

CLIMATE CHANGE AND ENERGY RELATED ISSUES

Recognising that climate change and energy related issues are some of the main environmental challenges to be addressed, a climate change and energy initiative has been launched. This initiative, which mobilises a wide range of complementary expertise from all EADS business areas, provides EADS with a robust and detailed assessment of EADS challenges and opportunities in a "low carbon economy".

In order to meet stakeholders' increasing demands for carbon related information, and in anticipation of more stringent regulation (*e.g.*, emission trading schemes, taxation and carbon labelling), a carbon footprint including both scope 1 and scope 2 emissions has been performed according to the Green House Gas Protocol (GHG protocol) with key international partnership. This allows the identification of the various risks, but also of the opportunities to further reduce GHG emission and relevant carbon dependencies. Further testing is being pursued to estimate the amount of carbon contained within EADS' supply chain as part of the GHG road testing experimentation.

A potential climate change risk to EADS operations also relates to the expected scarcity of fossil fuel and the subsequent upward pressure on energy costs, combined with the planned construction of new infrastructure and increase in air traffic over the coming years. Accordingly, both from a cost, operational efficiency and sustainability perspective, the Group recognises that it has a responsibility to massively reduce energy usage where possible. This is why numerous improvement programmes have been already initiated across EADS to reduce the overall energy footprint of its infrastructure and install some renewable sources of energy, such as solar panels, geothermal heating or power stations. As a result of the measures implemented, and compared to the same perimeter of activity, the total energy consumption of EADS has decreased approximately 10% from 2008.

Some of EADS' facilities are already part of the EU Emission Trading Scheme and have implemented strong energy reduction initiatives. Recent inclusion of aviation into the EU Emission Trading Scheme (EC directive 2008/101) is also being addressed in close relation with the stakeholders of the air transport sector, which calls for a fair internationalisation of the EU Emission

1

2

3

4

5

Back to Contents

Trading Scheme under the supervision of International Civil Aviation Organisation.

Whereas EADS operations have a relatively limited impact in terms of overall GHG emissions (*e.g.* according to the IPCC (Intergovernmental Panel on Climate Change), air transport currently causes 2% of the total CO₂ man-made world emissions), the Group is committed to mobilising all necessary expertise and significantly increasing its research and technology efforts for designing, developing and manufacturing the cleanest, greenest and lowest energy demanding technologies and products.

In the research and technology area, EADS participates or leads major international and European technology programmes to address climate change related matters such as the EU “Clean Sky” Joint Technology Initiative (JTI). The Clean Sky JTI is the largest research project ever set up jointly with the European Commission and will run over a seven-year period with a total budget of €1.6 billion (half financed by the European Commission and half by the industry). Supporting the ACARE goals, “Clean Sky” intends to radically improve the impact of air transport on the environment in delivering innovative technologies and solutions, supporting step changes in the reduction of noise (50% reduction in perceived noise), emissions (50% reduction of CO₂ and 80% of NO_x) and consumption for the next generation of aircraft by 2020. It also covers research on green product lifecycle design including manufacturing, maintenance and disposal.

While Airbus, Eurocopter and EADS CASA each co-lead a specific integrated technology demonstrator (respectively smart fixed-wing aircraft, green rotorcraft and green regional aircraft), EADS Innovation Works and ATR participate as associate companies. Other initiatives dedicated to reduce the emissions of CO₂ in which EADS participates include the SESAR (Single European Sky ATM Research) programme, which aims at improving EU air traffic management through the implementation of the “Single European Sky”.

Substantial research efforts are being devoted within Airbus in joint cooperation with key external partnerships to move towards environmentally friendly alternatives to fossil fuels. An alternative fuel advisory board has been implemented grouping all necessary internal stakeholders. Airbus and Eurocopter have been working with universities, existing fuel companies and start-up companies, as well as with certification bodies, to develop “drop-in” bio-jet fuels and ensure their availability for commercial aviation. “Drop-in” fuels do not require either a change of the aircraft systems or any specific infrastructure. Certification is expected for a sustainable biofuel mix by 2011 (from certification bodies ASTM and DEF-STAN). Airbus, Qatar Airways, Qatar Science & Technology Park (QSTP) and Qatar Petroleum (QP) have recently joined forces to carry out engineering and economic analysis into the development, production and supply of sustainable bio jet fuel.

As a member of the aviation industry, and together its peers, Airbus promotes the view that use of sustainable biofuels should be reserved for the aviation industry. Unlike other industries, aviation has no other efficient alternative way of significantly limiting its carbon impact, despite the major reduction in fuel consumption already achieved through recent programmes such as the Airbus A380.

As part of the COP15 framework, the aviation sector has committed to reaching CO₂ neutral growth from 2020, and will also work towards halving net CO₂ emissions by 2050 (referenced to 2005).

Complementary research is being heavily developed in this field: EADS Astrium is exploring how to harvest solar energy from satellites and to ease its restitution on earth. All of these studies demonstrate Airbus and EADS' dedication to more eco-efficient and carbon neutral aviation and industry as a whole.

WASTE AND NATURAL RESOURCES

Various initiatives have been implemented across the Group to further reduce the level of total waste produced or eliminated. Considering the expected scarcity of some raw materials as well as the volatility of their relevant prices, reverse supply chain might certainly become of growing interest.

Despite efforts in recycling and recovery paths developed with the main waste management companies, the total waste production compared to ISO perimeter has significantly increased. Recycling of cured and uncured CFR composites has been carefully studied with the aim to separate and reuse recovered carbon fibres in some aerospace or secondary industry applications; various efficient technologies have been tested and some are being industrialised such as pyrolysis. Airbus has set up a three step approach to develop environmentally friendly dismantling practices. Following experimentation through the PAMELA project (Process for Advanced Management of End of Life Aircraft), it has been shown that significant improvements can be obtained compared to current dismantling practices. The optimised combination of advanced 3D techniques (Decommissioning, Disassembling and Dismantling) allows for a materials recovery rate of over 80% compared to less than 60% today. An industrial platform for dismantling has now been installed with partners; the TARMAC-AEROSAVE Company now effectively offers appropriate industrial services in this end of life management field.

AIR POLLUTANTS

Reducing air pollutants from operations and processes and throughout the life cycle has been a key priority for years. The main emissions are currently associated with volatile organic compounds (“VOC”) as well as with other air pollutants emitted at ground level from infrastructures or products. Major reduction in VOC has been obtained due to the development and the

implementation of new VOC smart painting techniques. In all divisions, ambitious programmes to substitute some critical solvents such as trichloroethylene have been conducted, and paint schemes now generally incorporate low VOC.

REACH AND HAZARDOUS SUBSTANCES MANAGEMENT

The European REACH (Registration, Evaluation and Authorisation of Chemicals) regulation (EU No. 2007/1906) came into force on 1 June 2007. REACH aims at improving the protection of human health and the environment through closer regulation of chemical use by industry; it replaces the pre-existing EU regulatory framework on chemicals. REACH introduces a range of new obligations over a period of 11 years which are intended to reduce risk that the 30,000 most frequently used chemicals may cause. The regulation will also bring about the phased withdrawal from use of some of the substances that are considered to be of very high concern for human health and environment.

Taking on board the lessons learned from the management of the RoHS and WEE directives and in order to provide a consistent compliance approach for the whole Company and support its

supply chain, a dedicated working group has been created as part of the EADS Environmental Network, bringing together all EADS business areas.

EADS, Airbus and other divisions are also joining forces at the international level (ASD, etc.) together with other major aerospace companies to further structure the entire sector's compliance approach. Following pre-registration, additional intensive efforts were devoted in 2009 to identify the various usages associated with substances and ensure participation in certain SIEFs (Substance Information Exchange Forum) when required. In anticipation of possible disruptions that might result from restrictions, ambitious elimination plans have been initiated to get rid of the most critical substances for the sector, including chromate-free, cadmium-free or lead-free projects. Strong exchanges within the business units, industrial peers and the supply chain are necessary to allow the qualification of most standardised possible solutions. While proactively moving towards the elimination of these substances, EADS and its divisions are committed to the highest achievable control of emissions, in full compliance with the applicable regulatory framework.

1.1.12 Employees

At 31 December 2009, the EADS workforce amounted to 119,506 employees (compared to 118,349 employees in 2008 and 116,493 employees in 2007), 96.7% of which consisted of full time employees. Depending on country and hierarchy level, the average working time is between 35 and 40 hours per week.

In 2009, 5,663 employees worldwide joined EADS (compared to 7,081 in 2008 and 6,860 in 2007). At the same time, 3,308 employees left EADS (compared to 5,078 in 2008 and 4,648 in 2007).

In total, 94.9% of EADS' active workforce is located in Europe on more than 100 sites.

WORKFORCE BY DIVISION AND GEOGRAPHIC AREA

The tables below provide a breakdown of EADS employees by division and geographic area, including the percentage of part-time employees. Employees of companies accounted for by the proportionate method (such as ATR, MBDA) are included in the tables on the same proportionate basis.

Employees by division	31 December 2009	31 December 2008	31 December 2007
Airbus*	61,987	53,906	56,029
Former MTA division	-	4,910	4,459
Defence & Security	21,093	22,787	22,113
Eurocopter	16,316	15,667	14,658
Astrium	14,624	13,674	12,587
Headquarters and Others	5,486	7,405	6,647
Total EADS	119,506	118,349	116,493

* Figures for 2009 include Airbus Military, following integration of the former MTA division into Airbus. Figures for 2008 and 2007 have not been restated.

1.1.13 Incorporation by Reference

The English versions of the following documents shall be deemed to be incorporated in and form part of this Registration Document:

- “Part 2/1.1 Presentation of the EADS Group” of the Registration Document filed in English with, and approved by, the AFM on 24 April 2008;
- “Section 1.1 Presentation of the EADS Group” of the Registration Document filed in English with, and approved by, the AFM on 22 April 2009;
- the Consolidated Financial Statements (IFRS) and the Company Financial Statements of EADS for the year ended 31 December 2007, together with the related notes, appendices and Auditors’ reports, as included in “Part 1/1.2 Financial Statements” of the Registration Document filed in English with, and approved by, the AFM on 24 April 2008 and filed in English with the Chamber of Commerce of Amsterdam;
- the Consolidated Financial Statements (IFRS) and the Company Financial Statements of EADS for the year ended 31 December 2008, together with the related notes,

appendices and Auditors’ reports, as attached to and incorporated by reference in the Registration Document filed in English with, and approved by, the AFM on 22 April 2009 and filed in English with the Chamber of Commerce of The Hague; and

- the Consolidated Financial Statements (IFRS) and the Company Financial Statements of EADS for the year ended 31 December 2009, together with the related notes, appendices and Auditors’ reports (as attached hereto).

Copies of the above-mentioned documents are available free of charge upon request in English, French, German and Spanish at the registered office of the Company and on www.eads.com.

Copies of the above-mentioned Registration Documents are also available in English on the website of the AFM on www.afm.nl. The above-mentioned financial statements are also available in English for inspection at the Chamber of Commerce of The Hague.

1.2 Recent Developments

US Tanker Programme

On 8 March 2010, EADS confirmed that the Northrop Grumman/EADS team would not bid for the US Air Force Tanker replacement programme, following the announcement by its partner Northrop Grumman that it had decided not to bid. The team had expressed serious concerns to the US Department of Defense (DoD) and the US Air Force that the acquisition methodology outlined in the request for proposal (RFP) would heavily weigh the competition in favour of the smaller, less capable Boeing tanker. Northrop Grumman's analysis of the RFP reaffirmed those concerns and prompted its decision not to bid.

On 19 March 2010, EADS announced that the US DoD had indicated that it would welcome a proposal from EADS North America as prime contractor for the tanker competition.

On 20 April 2010, EADS North America announced that it intended to submit a proposal on 9 July 2010 for the tanker competition and would offer the KC-45 – the most capable, American-built solution that is flown, proven and in production now.

EADS North America is progressing in discussions with potential U.S. partners to build a winning team in order to provide the most capable, best value solution to the Air Force.

Airbus to Increase A320 Family Production Rate

On 9 March 2010, Airbus announced that it would increase the monthly production rate for its single-aisle A320 Family from the current rate of 34 to 36, starting in December 2010. The production rate for the long-range A330/A340 Family will be maintained at the current level of eight per month.

Airbus' decision to raise its single-aisle production rate is driven by the continuing demand for its eco-efficient aircraft and a backlog in excess of some 2,300 A320 Family aircraft.

Launch Customer Nations and EADS Come to Agreement in Principle on A400M

On 5 March 2010, EADS announced that it and the launch customer nations had come to an agreement in principle regarding the A400M military transport aircraft with the intention to amend the original contract accordingly in the coming weeks. As part of this agreement in principle, the launch customer nations have agreed to:

- increase the price of the contract by €2 billion;
- waive all liquidated damages related to current delays;
- provide an additional amount of €1.5 billion in exchange for a participation in future export sales (Export Levy Facilities); and

- accelerate pre-delivery payments in the period of 2010 to 2014, a new schedule of which will be finalised in the amended contract.

Based on this agreement, an estimate at completion of updated revenues and costs including an assessment of risks, reviewed by the Board of Directors, leads to an increase of the A400M loss provision of €1.8 billion pre tax for the full year 2009. The update of the provision is based on a management assessment taking into consideration the agreement in principle between EADS and the seven customer nations.

If substantial changes on the assessment were to occur, EADS performance could be significantly impacted. EADS will provide further information on the amended contract once the negotiations are finalised.

The A400M cash flow profile for the coming years is still to be negotiated in the contract amendment; all parties are willing to mitigate negative cash impacts as far as possible.

EADS considers that this agreement provides a sound basis for a successful evolution of the A400M programme. EADS will strive to identify opportunities to significantly reduce risks in the A400M programme and to deliver a state of the art product within the new frame of the contract.

For further information relating to the A400M programme, see “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and “Notes to the Consolidated Financial Statements (IFRS) — Note 3: Accounting for the A400M programme”.

2

Management's Discussion and Analysis of Financial Condition and Results of Operations

2.1	Operating and Financial Review	70
2.1.1	Certain Information	70
2.1.2	Overview	70
2.1.3	Critical Accounting Considerations, Policies and Estimates	73
2.1.4	Measurement of Management's Performance	77
2.1.5	EADS Results of Operations	82
2.1.6	Changes in Consolidated Total Equity (including Non-controlling Interests)	87
2.1.7	Liquidity and Capital Resources	89

2.1 Operating and Financial Review

The following discussion and analysis is derived from and should be read together with the audited Consolidated Financial Statements (IFRS) of EADS as of and for the years ended 31 December 2009, 2008 and 2007 incorporated by reference herein. These financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") issued by the International Accounting Standards Board as endorsed by the European Union, and with Part 9 of Book 2 of the Netherlands Civil Code.

2.1.1 Certain Information

EXCHANGE RATE INFORMATION

The financial information presented in this document is expressed in euros, US dollars or pounds sterling. The following table sets out, for the periods indicated, certain information concerning the exchange rate between the euro and the US dollar and pound sterling, calculated using the official European Central Bank fixing rate:

Year ended	Average		Period End	
	€-US\$	€-£	€-US\$	€-£
31 December 2007	1.3702	0.6842	1.4721	0.7334
31 December 2008	1.4708	0.7963	1.3917	0.9525
31 December 2009	1.3948	0.8909	1.4406	0.8881

RATINGS

EADS is currently rated A1 with a stable outlook by Moody's Investors Service, BBB+ with a stable outlook by Standard and Poor's and BBB+ with a stable outlook by Fitch Ratings.

2.1.2 Overview

With consolidated revenues of €42.8 billion in 2009, EADS is Europe's premier aerospace and defence company and one of the largest aerospace and defence companies in the world. In terms of market share, EADS is among the top two manufacturers of commercial aircraft, civil helicopters, commercial space launch vehicles and missiles, and a leading supplier of military aircraft, satellites and defence electronics. In 2009, it generated approximately 75% of its total revenues in the civil sector (compared to 75% in 2008) and 25% in the defence sector (compared to 25% in 2008). As of 31 December 2009, EADS' active headcount was 119,506.

As of the end of 2009, EADS organises its businesses into the following five reportable segments:

- **Airbus Commercial:** Development, manufacturing, marketing and sale of commercial jet aircraft of more than 100 seats and aircraft conversion;
- **Airbus Military:** Development, manufacturing, marketing and sale of military transport aircraft and special mission aircraft; this includes the former MTA division as well as all Airbus A400M activities.

Airbus Commercial and Airbus Military together form the Airbus division;
- **Eurocopter:** Development, manufacturing, marketing and sale of civil and military helicopters and provision of maintenance services;
- **Astrium:** Development, manufacturing, marketing and sale of satellites, orbital infrastructures and launchers and provision of space services; and
- **Defence & Security:** Development, manufacturing, marketing and sale of missile systems, military combat aircraft

1

2

3

4

5

Back to Contents

and training aircraft; provision of defence electronics and defence-related telecommunications solutions and logistics; training, testing, engineering and other related services.

As discussed above, Airbus has integrated the former MTA division under the name “Airbus Military” from 2009 onwards. Figures for Airbus Military accordingly include the former MTA division as well as all Airbus A400M operations to reflect the prime contractor responsibility over the programme; figures for 2008 have been restated accordingly, while figures for 2007 remain unchanged. The effect of internal subcontracting is eliminated in the consolidated figures of the Airbus division (with respect to the work share of Airbus Commercial) and further at EADS group level (with respect to the work share of other EADS divisions).

“Other Businesses” mainly consist of the development, manufacturing, marketing and sale of regional turboprop aircraft, light commercial aircraft and aircraft components. EADS EFW (previously consolidated within “Other Businesses”) has been consolidated within Airbus Commercial from 2009 onwards; figures for 2008 have been restated accordingly, while figures for 2007 remain unchanged. Following EADS’ sale of 70% of the shares in Socata to Daher in January 2009, the remaining 30% of Socata is accounted for using the equity method and presented within “Other Businesses”; figures for 2007 and 2008 have not been restated.

Finally, in connection with the aerostructures reorganisation strategy initiated under Power8, the Augsburg site (previously consolidated within the DS division) has been consolidated within Airbus Commercial from 2009 onwards. Figures for 2007 and 2008 have not been restated.

2.1.2.1 SIGNIFICANT PROGRAMME AND RESTRUCTURING DEVELOPMENTS IN 2007, 2008 AND 2009

A400M programme. Just before the end of 2007, EADS announced that the first deliveries of the A400M would be delayed by six to twelve months. In terms of financial impact, Airbus recorded an additional loss-making contract provision and charges totalling €-1.2 billion in 2007, in addition to provisions and charges of €-0.2 billion recorded at EADS group level and €-0.1 billion recorded at other divisions. The provisions were intended to cover, among other things, cost overruns on the programme and the risk of penalty payments to customers.

In September 2008, EADS announced an undefined delay of the first flight of the A400M, mainly due to the unavailability of the propulsion system and beyond that – but not first flight critical – due to the fact that other suppliers of mission critical systems and of systems integration were severely struggling with the challenging technical requirements of this aircraft. As a result of this undefined delay and the uncertain technical environment which eventually led to the proposal of a new A400M programme approach to the European launch nations (through

OCCAR), EADS applied the early stage method of accounting on the A400M programme beginning in September 2008. Under this method, all A400M related work-in-progress, which would have been expensed upon the completion of technical milestones according to the estimate at completion method of accounting, was expensed as incurred, with related revenues recognised up to the recoverable part of these costs as per the initial A400M launch contract. At the same time, the A400M loss-making contract provision was updated on the basis of the probable excess contract costs over remaining contract revenues that could be estimated at year-end 2008, which led to the recording of an additional loss-making contract provision and charges totalling €-0.7 billion in 2008.

During 2009, negotiations among EADS, OCCAR and the launch nations addressed various aspects of a new programme approach for the A400M. Given the progress made on the commercial negotiations between EADS and the launch nations since the fourth quarter of 2009, the successful first flight of the A400M and the significantly higher visibility on total expected production costs on the A400M programme, EADS has decided to discontinue the early stage method of accounting on the A400M programme as of the end of 2009 and to re-assess the A400M loss-making contract provision as part of the related year-end closing procedures.

The re-assessment of the need and amount of additional provisions for the continuation and completion of the A400M programme is based on the “Understanding on the Continuation of the A400M Programme” signed between the launch nations and EADS/Airbus/AMSL on 5 March 2010, following ongoing discussion since the fourth quarter of 2009. As part of this agreement in principle, the launch nations have agreed to:

- increase the price of the contract by €2 billion;
- waive all liquidated damages related to current delays;
- provide an additional amount of €1.5 billion in exchange for a participation in future export sales (Export Levy Facilities); and
- accelerate pre-delivery payments in the period of 2010 to 2014, a new schedule of which will be finalised in the amended contract.

Based on these elements and the current best estimate of EADS’ management, an estimate at completion of updated revenues and costs including an assessment of risks on the A400M programme leads to the recording of an additional loss-making contract provision and charges totalling €-1.8 billion in 2009. The A400M cash flow profile for the coming years is still to be negotiated in the envisaged contractual amendments; all parties are willing to mitigate negative cash impacts as far as possible.

However, there is no certainty that the envisaged contractual amendments to the initial A400M launch contract will be implemented, including any necessary parliamentary approval processes by the launch nations. Consequently, and in particular with regard to the envisaged export levy facilities, there may be a need for EADS' management to re-assess its assumptions regarding the consideration of the elements described above in the computation of the A400M loss-making contract provision as soon as the negotiations are concluded. In case of such a re-assessment, EADS future financial performance could be significantly impacted.

For further information on the A400M programme, see "Notes to the Consolidated Financial Statements (IFRS) — Note 3: Accounting for the A400M programme" and "Information on EADS' Activities — 1.2 Recent Developments".

A380 programme. In 2007, Airbus incurred significant costs in respect of the A380 programme, due primarily to excess costs above the initially expected learning curve and ongoing fleet support. Nevertheless, the impact on EBIT* represented a €1.5 billion improvement over 2006.

In 2008, the business update of the A380 programme led to the recording of an additional loss-making contract provision of €-1.1 billion (before foreign exchange effects). This charge incorporated changes to the A380 production plan to be implemented in 2009 and certain higher recurring costs reflecting the ramp-up challenges faced by EADS. In addition, ongoing support costs were reflected in the underlying EBIT* performance in 2008.

In 2009, the A380 continued to weigh significantly on underlying performance. Following completion of an industrial and financial review on the programme, certain deliveries have been rescheduled and an additional loss-making contract provision of €-0.2 billion (before foreign exchange effects) has been recorded to reflect both this shift as well as an increase in recurring costs. Beyond the adjustment of the provision, ongoing fleet support, inefficiencies and under absorption of fixed costs had a negative impact on 2009 performance.

A350 XWB programme. In 2007, EBIT* at Airbus was burdened by charges with respect to the A350 XWB programme, which amounted to approximately €-1.0 billion. These charges related in particular to the recording of loss-making contract provisions on the first orders for the A350 XWB, the margins of which were weighed down by launch-order pricing and initial learning curve costs.

Following passage of the detailed definition freeze milestone on the A350 XWB programme at the end of 2008, development continued to progress in 2009. In March 2010, Airbus

indicated that it had used up some of the previous buffers in the development of the A350 programme, but that the targeted date for entry into service remained unchanged.

Power8, Power8 Plus and Future EADS programmes. At the beginning of 2007, Airbus launched a four-year restructuring programme referred to as "Power8", with the goal of achieving annual EBIT* contributions of €2.1 billion from 2010 onwards and an additional €5 billion of cumulative cash flow from 2007 to 2010. As part of the planned measures under Power8 to reduce overhead costs, and specifically headcount, EADS recorded a restructuring expense of €-624 million in EBIT* in 2007. In 2008 and 2009, €194 million and €140 million of this provision were reversed, respectively, to reflect a lower level of restructuring obligation than originally anticipated.

Savings realised pursuant to Power8 provided gross cost savings of €2 billion in 2009 compared to the projected cost baseline. Given the progress and prospects achieved on the Power8 programme so far, EADS maintains the previously communicated Power8 targets regarding EBIT* and cash savings.

In 2008, EADS launched a Group-wide cost savings programme referred to as "Power8 Plus", with the goal of achieving gross annual savings of €1 billion against the projected cost base targeted for the end of 2012. Airbus is expected to contribute roughly two-thirds of the targeted cost savings, with the remaining portion to be contributed by the Eurocopter, Astrium and Defence & Security divisions as well as by EADS headquarters.

Finally, EADS is currently working on a further integration and cost savings programme referred to as "Future EADS", with the goal of achieving gross annual savings of €350 million against the projected cost base targeted for the end of 2012. The different cost savings initiatives are being consolidated at division level as they mature.

2.1.2.2 TRENDS

Based on a number of active sales campaigns at Airbus which are expected to lead to 250-300 gross aircraft orders in 2010, as well as a stable and overbooked backlog on its A320 Family single aisle aircraft, Airbus has announced that it will increase the monthly production rate for the A320 Family from the current rate of 34 to 36, starting in December 2010. The production rate for the long-range A330/A340 Family will be maintained at the current level of around eight per month.

Airbus delivered 498 aircraft in 2009 and is targeting delivery of up to the same number of aircraft in 2010. Eurocopter is expected to deliver approximately 6% fewer helicopters than in 2009 (which consisted of 558 deliveries). Any major production or market disruption or economic downturn could lead to revision of these figures.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

1

2

3

4

5

Back to Contents

Furthermore, EADS will be faced with significant currency deterioration in 2010 linked to the declining dollar rate in the hedge portfolio. A380, while slightly improving, will continue to weigh substantially on EBIT* as in 2009. Cost savings and some improvement in aircraft pricing should contribute positively while weaker helicopter deliveries, some increase

in research and development expenses and cost inflation will weigh on profitability. Going forward, the EBIT* performance of EADS will be dependent on the Group's ability to execute on the A400M, A380 and A350 programmes in line with the commitments made to its customers.

2.1.3 Critical Accounting Considerations, Policies and Estimates

2.1.3.1 SCOPE OF AND CHANGES IN CONSOLIDATION PERIMETER

Disposals and acquisitions of interests in various businesses can account, in part, for differences in EADS' results of operations for one year as compared to another year.

Acquisitions and Disposals

On 1 October 2009, Atlas Elektronik GmbH, a joint venture of EADS and ThyssenKrupp, acquired via its subsidiary Atlas Elektronik UK, the underwater systems business of QinetiQ based in Winfrith, Dorset (United Kingdom). The acquired business "Synge" will primarily serve as a contributor in advancing Atlas Elektronik's market position for sonar and hydro-acoustic solutions. This purchase led to the recognition of preliminary goodwill of € 13 million (not yet finally determined).

On 7 January 2009, EADS sold 70% of the shares in Socata to Daher. The remaining 30% of Socata is accounted for using the equity method and presented in "Other Businesses".

On 5 January 2009, EADS sold its Airbus site in Filton (UK) to GKN.

During 2009, EADS increased its share in Spot Image based in Toulouse (France), a world leader in the provision of satellite imagery and geo-information value-added services, from 81% to 90% by acquiring further shares from non-controlling shareholders. These transactions increased goodwill by € 1 million.

On 22 April 2008, EADS acquired PlantCML based in California (US), a leading provider of emergency response solutions, which is fully consolidated from that date in the DS division. The difference between the purchase price and the acquired net assets led to the recognition of final goodwill of US\$ 278 million.

On 28 July 2008, EADS increased its share in Spot Image from 40% to 81%, but had been consolidating it fully in Astrium since 1 January 2008 based on effective control since that date. This additional purchase increased goodwill by € 4 million.

On 7 April 2008, EADS acquired Surrey Satellite Technology Limited (SSTL) based in the UK, which is specialised in the design and manufacture of small and micro satellites. The acquisition was approved by the European Commission in December 2008 leading to consolidation of the SSTL balance sheet as at 31 December 2008 in Astrium. This purchase led to the recognition of final goodwill of £38 million.

In January 2007, EADS increased its share in the Atlas Elektronik group from 40% to 49% in connection with the contribution in kind of EADS' naval business to Atlas Elektronik. Atlas Elektronik is proportionately consolidated and the final determination of the difference between the purchase price and the acquired net assets then led to the recognition of €42 million of goodwill.

On 10 January 2007, EADS sold its remaining 60% stake in Sogerma Services, as well as its remaining stakes in Sogerma America Barfield B.C. (100%) and EADS Sogerma Tunisia (50.1%).

See "Notes to the Consolidated Financial Statements (IFRS) — Note 5: Acquisitions and disposals".

2.1.3.2 UK PENSION COMMITMENTS

In the UK, EADS participates in several funded trustee-administered pension plans for both executive and non-executive employees, with BAE Systems being the principal employer. These plans qualify as multi-employer defined benefit plans under IAS 19 "Employee Benefits". EADS' most significant investments in terms of employees participating in these BAE Systems UK pension plans are Airbus UK and MBDA UK. For Airbus, this remains the case even subsequent to the acquisition of BAE Systems' 20% non-controlling interest in Airbus on 13 October 2006. Participating Airbus UK employees have continued to remain members in the BAE Systems UK pension plans due to the UK pension agreement between EADS and BAE Systems and a change in UK pension legislation enacted in April 2006.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

Generally, based on the funding situation of the respective pension plans, the pension plan trustees determine the contribution rates to be paid by the participating employers to adequately fund the plans. The different UK pension plans in which EADS investments participate are currently underfunded. BAE Systems has agreed with the trustees to undertake various measures in order to remedy such underfunding. These include: (i) making regular contribution payments for active employees at levels well above those that would prevail in the case of adequately funded plans and (ii) making extra employers' contributions.

Due to contractual arrangements between EADS and BAE Systems, the contributions that EADS must make in respect of its participation in the two largest pension plans are capped for a defined period of time (until July 2011 for Airbus UK and until December 2007 for MBDA UK). Contributions exceeding the respective capped amounts are paid by BAE Systems. During the period of the contribution caps, EADS is therefore neither exposed to increased regular contribution payments resulting from the pension plans' underfunding, nor to a participation in extra contribution payments. Even after the expiry of the contribution caps, the unique funding arrangements between BAE Systems and EADS create a situation for EADS different from common UK multi-employer plans, with special regulations limiting the regular contributions that must be paid by Airbus UK and MBDA UK to rates applicable to all participating employers.

Based on the information that BAE Systems has provided regarding the various pension plans, EADS has prepared an estimate of its share in plan assets, defined benefit obligations and related underfunding, which takes into account the impacts of the contribution caps' mechanism described above as well as those of future extra contributions agreed by BAE Systems with plan trustees. Accordingly, EADS has recorded a provision of €839 million as of 31 December 2009 (compared to €578 million as of 31 December 2008) for its current share of the net pension underfunding in these plans. A related amount of actuarial gains and losses of €-1,013 million has been recorded in total equity (net of deferred taxes) as of 31 December 2009 (compared to €-804 million as of 31 December 2008) in accordance with IAS 19.

For further information related to EADS' participation in multi-employer pension plans in the UK, see "Notes to the Consolidated Financial Statements (IFRS) — Note 26B: Provisions for retirement plans".

2.1.3.3 FAIR VALUE ADJUSTMENTS

The merger of the operations of Aerospatiale-Matra, DaimlerChrysler Aerospace and Construcciones Aeronáuticas S.A., leading to the creation of EADS in 2000, was recorded using the purchase method of accounting with Aerospatiale-Matra as the acquirer. Accordingly, the book value of certain

assets and liabilities, mainly property, plant and equipment and inventories, was adjusted by an aggregate amount of €1.8 billion, net of income taxes, to allocate a portion of the respective fair market values of DaimlerChrysler Aerospace and Construcciones Aeronáuticas S.A. at the time of the merger (the "fair value adjustments"). These aggregate additions in value are generally being depreciated over four to fifteen years for fixed assets and were amortised over approximately 24 months for inventories. In addition, in 2001 in connection with the formation of Airbus S.A.S., EADS adjusted the book value of Airbus fixed assets and inventories by an aggregate amount of €0.3 billion, net of income taxes, to reflect their fair market values. The fair value adjustments lead to a depreciation expense that is recorded in cost of sales in the consolidated income statement. For management reporting purposes, EADS treats these depreciation charges as non-recurring items in EBIT pre-goodwill impairment and exceptionals. See "— 2.1.4.2 Use of EBIT".

2.1.3.4 IMPAIRMENT/WRITE-DOWN OF ASSETS

When a triggering event, such as an adverse material market event or a significant change in forecasts or assumptions, occurs, EADS performs an impairment test on the assets, group of assets, subsidiaries, joint ventures or associates likely to be affected. In addition, EADS tests goodwill for impairment in the fourth quarter of each financial year, whether or not there is any indication of impairment. An impairment loss is recognised in the amount by which the asset's carrying amount exceeds its recoverable amount.

Generally, the discounted cash flow method is used to determine the value in use of the assets. The discounted cash flow method is particularly sensitive to the selected discount rates and estimates of future cash flows by EADS' management. Consequently, slight changes to these elements can materially affect the resulting asset valuation and therefore the amount of the potential impairment charge.

The discount rates used by EADS are derived from the weighted average cost of capital of the businesses concerned. See "Notes to the Consolidated Financial Statements (IFRS) — Note 2: Summary of significant accounting policies — Significant Accounting Policies — Impairment of non-financial assets" and "— Note 14: Intangible assets".

The impairment of goodwill has an effect on profitability, as it is recorded in the line item "Other expenses" on EADS' consolidated income statement. No goodwill was impaired in 2007, 2008 or 2009.

2.1.3.5 RESEARCH AND DEVELOPMENT EXPENSES

Pursuant to the application of IAS 38 "Intangible Assets", EADS assesses whether product-related development costs qualify for capitalisation as internally generated intangible assets. Criteria for capitalisation are strictly applied. All research and development

1

2

3

4

5

Back to Contents

costs not meeting the IAS 38 criteria are expensed as incurred in the consolidated income statement.

In 2007, €93 million of product-related development costs were capitalised in accordance with IAS 38. €87 million were capitalised in 2008, and €53 million were capitalised in 2009.

Capitalised development costs are generally amortised over the estimated number of units produced. If the number of units produced cannot be estimated reliably, capitalised development costs are amortised over the estimated useful life of the internally generated intangible asset. Amortisation of capitalised development costs is recognised within "Cost of sales".

Amortisation of capitalised development costs amounted to €-46 million in 2007, €-56 million in 2008 and €-146 million in 2009, most of which related to the MRTT and the Airbus A380 programme.

Internally generated intangible assets are reviewed for impairment annually when the asset is not yet in use and subsequently whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

2.1.3.6 ACCOUNTING FOR HEDGED FOREIGN EXCHANGE TRANSACTIONS IN THE FINANCIAL STATEMENTS

More than 60% of EADS' revenues are denominated in US dollars, whereas a substantial portion of its costs is incurred in euros and, to a lesser extent, pounds sterling. EADS uses hedging strategies to manage and minimise the impact of exchange rate fluctuations on its profits. See "— 2.1.8.1 Foreign Exchange Rates" and "Risk Factors — 1. Financial Market Risks — Exposure to Foreign Currencies".

Cash flow hedges. The Group generally applies cash flow hedge accounting to foreign currency derivative contracts that hedge the foreign currency risk on future sales as well as to certain interest rate swaps that hedge the variability of cash flows attributable to recognised assets and liabilities. Changes in fair value of the hedging instruments related to the effective part of the hedge are reported in accumulated other comprehensive income ("AOCI"), a separate component of total consolidated equity, net of applicable income taxes and recognised in the consolidated income statement in conjunction with the result of the underlying hedged transaction, when realised. See "— 2.1.6 Changes in Consolidated Total Equity (including Non-controlling Interests)". The ineffective portion is immediately recorded in "Profit (loss) for the period". Amounts accumulated in equity are recognised in profit or loss in the periods when the hedged transaction affects the income statement, such as when the forecast sale occurs or when the finance income or finance expense is recognised in the income statement. If hedged transactions are cancelled, gains and losses on the hedging instrument that were previously recorded in equity are generally recognised in "Profit (loss) for the period". For products such as aircraft, EADS typically hedges the first forecasted highly

probable future cash inflows for a given month based upon final payments at delivery. See "— 2.1.8.1 Foreign Exchange Rates".

Cash flow hedges associated with transactions that are cancelled are generally deemed terminated for accounting purposes. The sum of (i) changes in the fair value of these hedges since 1 January and (ii) a reversal of the portion of AOCI corresponding to these hedges prior to 1 January, are then generally recorded in revenues and deferred tax benefits (expenses) in the consolidated income statement.

Revenues in currencies other than the euro that are not hedged through financial instruments are translated into euro at the spot exchange rate at the date the underlying transaction occurs.

2.1.3.7 FOREIGN CURRENCY TRANSLATION

EADS' consolidated financial statements are presented in euros. The assets and liabilities of foreign entities whose reporting currency is other than euro are translated using period-end exchange rates, while the corresponding income statements are translated using average exchange rates during the period. All resulting translation differences are included as a component of AOCI.

Transactions in foreign currencies are translated into euro at the exchange rate prevailing on transaction date. Monetary assets and liabilities denominated in foreign currencies at period-end are translated into euro using the period-end exchange rate. Foreign exchange gains and losses arising from translation of monetary assets are recorded in the consolidated income statement, except when deferred in equity as qualifying hedging instruments in cash flow hedges.

Non-monetary assets and liabilities denominated in foreign currencies, which are stated at historical cost, are translated into euro at the exchange rate in effect on the date of the transaction. Translation differences on non-monetary financial assets and liabilities are reported as part of the fair value gain or loss. Translation differences of non-monetary financial assets such as equity securities classified as available for sale are included in AOCI.

Goodwill and fair value adjustments arising on the acquisition of a foreign entity that was acquired after 31 December 2004 are treated as assets and liabilities of the acquired company and are translated into euro at the period-end exchange rate. Regarding transactions prior to that date, goodwill, assets and liabilities acquired are treated as those of the acquirer.

The accumulated amount of translation differences recorded in AOCI is released to profit or loss when the associated foreign entity is disposed of or liquidated or the associated asset or liability is disposed of, respectively.

Currency Translation Adjustment and Translation Mismatch Related to Airbus

Following the signing of an Advance Pricing Agreement with tax authorities in April 2004, Airbus GIE (a US dollar-denominated entity) was merged into Airbus S.A.S. (a euro-denominated entity) with retrospective effect as of 1 January 2004. Consequently, as from such date, operations of the former Airbus GIE are treated as “foreign currency operations” and accounted for in accordance with EADS’ consistently applied accounting principles.

Prior to the merger, Airbus GIE operations, with the exception of those hedged with financial instruments, were recorded at the exchange rate prevailing at the time of aircraft delivery, with outstanding operations being re-valued in the balance sheet at each period end using the closing exchange rate of such period. From 1 January 2004, all non-hedged US dollar-denominated operations, including outstanding operations of the former Airbus GIE, are recorded on the basis of exchange rates prevailing at the date of receipt or payment of US dollars.

In particular, customer advances (and the corresponding revenues recorded when sales recognition occurs) are now translated at the exchange rate prevailing on the date they are received. US dollar-denominated costs are converted at the exchange rate prevailing on the date they are incurred. To the extent that US dollar-denominated customer advances differ, in terms of timing of receipt or amount, from corresponding US dollar-denominated costs, there is a foreign currency exchange impact (mismatch) on EBIT*. Additionally, the magnitude of any such difference, and the corresponding impact on EBIT*, is sensitive to variations in the number of deliveries.

2.1.3.8 ACCOUNTING FOR SALES FINANCING TRANSACTIONS IN THE FINANCIAL STATEMENTS

In order to support product sales, primarily at Airbus, Eurocopter and ATR, EADS may agree to participate in the financing of customers, on a case-by-case basis, directly or through guarantees provided to third parties. Certain sales contracts may include the provision of an asset value guarantee (“AVGs”), whereby EADS guarantees a portion of the market value of an aircraft during a limited period, starting at a specific date after its delivery (in most cases, 12 years post-delivery). See “— 2.1.7.4 Sales Financing” and “Notes to the Consolidated Financial Statements (IFRS) — Note 34: Commitments and contingencies”. The accounting treatment of sales financing transactions varies based on the nature of the financing transaction and the resulting exposure.

On Balance Sheet. When, pursuant to a financing transaction, the risks and rewards of ownership of the financed aircraft reside with the customer, the transaction is characterised as either a

loan or a finance lease. In such instances, revenues from the sale of the aircraft are recorded upon delivery, while financial interest is recorded over time as financial income. The outstanding balance of principal is recorded on the statement of financial position (on balance sheet) in long-term financial assets, net of any accumulated impairments. See “Notes to the Consolidated Financial Statements (IFRS) — Note 17: Investments in associates accounted for under the equity method, other investments and other long-term financial assets”.

By contrast, when the risks and rewards of ownership remain with the Group, the transaction is characterised as an operating lease. EADS’ general policy is to avoid, whenever possible, operating leases for new aircraft to be delivered to customers. Therefore, new operating leases primarily arise in connection with the future re-marketing of aircraft. Rather than recording 100% of the revenues from the “sale” of the aircraft at the time of delivery, rental income from such operating leases is recorded in revenues over the term of the respective leases. The leased aircraft are recorded at production cost on the statement of financial position (on balance sheet) as property, plant and equipment, and the corresponding depreciation and potential impairment charges are recorded in cost of sales. See “Notes to the Consolidated Financial Statements (IFRS) — Note 15: Property, plant and equipment”.

If the present value of an AVG exceeds 10% of the sales price of the aircraft, the sale of the underlying aircraft is accounted for as an operating lease in the consolidated financial statements. In this case, upon aircraft delivery, the cash payment received from the customer is recognised on the consolidated balance sheet as deferred income and amortised straight-line up to the amount, and up to the last exercise date, of the AVG. The production cost of the aircraft is recorded on the balance sheet as property, plant and equipment. Depreciation expenses are recorded in cost of sales in the consolidated income statement. See “Notes to the Consolidated Financial Statements (IFRS) — Note 15: Property, plant and equipment” and “Note 31: Deferred income”.

Off Balance Sheet — Contingent Commitments. Certain sales financing commitments, such as lease in/lease out structures and AVGs the present value of which is below the 10% threshold, are not recorded on the statement of financial position (on balance sheet).

As a result, transactions relating to such AVGs are accounted for as sales, with the related exposure deemed to be a contingent commitment. To reduce exposure under AVGs and to minimise the likelihood of their occurrence, the Group extends them with prudent guaranteed asset values and restrictive exercise conditions, including limited exercise window periods.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

1

2

3

4

5

Back to Contents

Under lease in/lease out structures, which Airbus and ATR applied in the past to allow investors to take advantage of certain jurisdictions' leasing-related tax benefits, the risks and rewards of ownership of the aircraft are typically borne by a third party, usually referred to as the head lessor. The head lessor leases the aircraft to Airbus or ATR, which in turn sub-leases it to the customer. To the extent possible, the terms of the head lease and sub-lease match payment streams and other financial conditions. Such commitments by Airbus or ATR are reported as off-balance sheet contingent liabilities. See "Notes to the Consolidated Financial Statements (IFRS) — Note 34: Commitments and contingencies".

Provisions and Allowances. Under its provisioning policy for sales financing risk, EADS records provisions to fully cover its estimated financing and asset value net exposure. Provisions pertaining to sales financing exposure, whether on-balance sheet or off-balance sheet, are recorded as impairments of the related assets or in provisions. Provisions recorded as liabilities relate primarily to off-balance sheet commitments. See "Notes to the Consolidated Financial Statements (IFRS) — Note 26C: Other provisions". Provisions are recorded as impairments of the related assets when they can be directly related to the corresponding

asset. See "Notes to the Consolidated Financial Statements (IFRS) — Note 15: Property, plant and equipment" and "— Note 17: Investments in associates accounted for under the equity method, other investments and other long-term financial assets". While management views its estimates of valuations of collateral as conservative, changes in provisions reflecting revised estimates may have a material impact on net income in future periods.

2.1.3.9 PROVISIONS FOR LOSS-MAKING CONTRACTS

EADS records provisions for loss-making contracts when it becomes probable that total contract costs will exceed total contract revenues. Due to the size, length of time and nature of many of EADS' contracts, the estimation of total revenues and costs at completion is complicated and subject to many variables and estimates, including penalties to be paid to customers related to contract performance. Loss-making contract provisions are therefore reviewed and reassessed regularly. However, future changes in the assumptions used by EADS or a change in the underlying circumstances, such as the fluctuation of certain foreign exchange rates, may lead to a revaluation of EADS' loss-making contract provisions and adversely or positively affect its future financial performance.

2.1.4 Measurement of Management's Performance

2.1.4.1 ORDER BACKLOG

Year-end order backlog (valued at catalogue prices for commercial aircraft activities) consists of contracts signed up to that date. Only firm orders are included in calculating order backlog – for commercial aircraft, a firm order is defined as one for which EADS receives a non-refundable down payment on a definitive contract not containing a "walk-away" provision. Defence-related orders are included in the backlog upon signature of the related procurement contract (and the receipt, in most cases, of an advance payment). Commitments under defence "umbrella" or "framework" agreements by governmental customers are not included in backlog until they are officially notified to EADS.

For civil market contracts, amounts of order backlog reflected in the table below are derived from catalogue prices, escalated to the expected delivery date and, to the extent applicable, converted into euro (at the corresponding hedge rate for the hedged portion of expected cash flows, and at the period-end spot rate for the non-hedged portion of expected cash flows). The amount of defence-related order backlog is equal to the contract values of the corresponding programmes.

Consolidated Backlog for the years ended 31 December 2009, 2008 and 2007 ⁽¹⁾

	Year ended 31 December 2009		Year ended 31 December 2008		Year ended 31 December 2007	
	Amount in €bn	In percentage ⁽²⁾	Amount in €bn	In percentage ⁽²⁾	Amount in €bn	In percentage ⁽²⁾
Airbus ⁽³⁾⁽⁴⁾	339.7	87%	357.8	90%	283.8	81%
Airbus Commercial	320.3	82%	337.2	84%	-	-
Airbus Military	20.7	5%	22.3	6%	-	-
Military Transport Aircraft ⁽⁴⁾	-	-	-	-	19.9	6%
Eurocopter	15.1	4%	13.8	3%	13.5	4%
Astrium	14.6	4%	11.0	3%	12.9	4%
Defence & Security	18.8	5%	17.0	4%	17.8	5%

Total	389.1		400.2		339.5	

(1) Without options.

(2) Before "Other Businesses" and "Headquarters/Consolidation".

(3) Based on catalogue prices for commercial aircraft activities.

(4) Following integration of Airbus Military into Airbus, Airbus reports in two segments as of 2009: Airbus Commercial and Airbus Military. The Airbus Commercial perimeter includes EFW and the completed aerostructures reorganisation but now excludes the A400M. Airbus Military includes the former MTA division as well as all A400M activity. Eliminations between Airbus Commercial and Airbus Military are treated at the Airbus Division level. Figures for 2008 (but not 2007) have been restated accordingly, except for the Augsburg site transferred from the DS division. See "—2.1.2 Overview".

(5) As of 2009, the composition of "Other Businesses" differs compared to 2008. Since EADS currently holds only a minority stake in Socata, this unit is now consolidated at equity within EADS' accounts. Also as of 2009, EADS EFW is consolidated within Airbus Commercial. Therefore, "Other Businesses" in 2009 consists of ATR, EADS Sogerma, EADS North America and 30% of Socata at equity. Figures for 2008 (but not for 2007) have been adjusted to reflect the consolidation of EADS EFW within Airbus Commercial. See "—2.1.2 Overview".

The €-11.1 billion decrease in the 31 December 2009 order backlog, to €389.1 billion, primarily reflects the impact of a weaker US dollar spot rate used for conversion of the non-hedged portion of the backlog into euro (€-US\$ 1.44 at the end of 2009 as compared to €-US\$ 1.39 at the end of 2008), which had a negative impact of approximately €11 billion at year end. Order intake at EADS in 2009 (€45.8 billion) roughly equalled the revenues accounted for in the same year (€42.8 billion).

Airbus' backlog decreased by €-18.1 billion from 2008, to €339.7 billion, reflecting a decline at both Airbus Commercial and Airbus Military. Airbus Commercial's backlog decreased by €-16.9 billion from 2008, to €320.3 billion, primarily reflecting the negative net foreign currency adjustment to the non-hedged portion of the order backlog and a book-to-bill ratio of less than one with new orders of €23.5 billion. This order intake consisted of 271 net orders in 2009 (as compared to 777 in 2008). Total order backlog at Airbus Commercial amounted to 3,488 aircraft at the end of 2009 (as compared to 3,715 aircraft at the end of 2008). Airbus Military's backlog decreased by €-1.6 billion from 2008, to €20.7 billion, primarily reflecting a book-to-bill ratio of less than one with new orders of €0.6 billion. This order intake consisted of 10 new net orders in 2009, including 15 orders for medium and light military aircraft and three MRTT, partially offset by South Africa's cancellation of eight A400M aircraft.

Total order backlog at Airbus Military amounted to 250 aircraft at the end of 2009 (as compared to 256 aircraft at the end of 2008).

Eurocopter's backlog increased by €1.3 billion from 2008, to €15.1 billion, reflecting a book-to-bill ratio of more than one with new orders of €5.8 billion, primarily for military helicopters. This order intake consisted of 344 net orders in 2009 (as compared to 715 in 2008). Total order backlog amounted to 1,303 helicopters at the end of 2009 (as compared to 1,515 helicopters at the end of 2008).

Astrium's backlog increased by €3.6 billion from 2008, to €14.6 billion, reflecting a book-to-bill ratio of more than one with new orders of €8.3 billion. This record order intake was driven by orders for 35 Ariane 5 launchers, a third production tranche of M51 missiles and telecommunications satellites.

The DS division's backlog increased by €1.8 billion from 2008, to €18.8 billion, reflecting a book-to-bill ratio of more than one with new orders of €8.0 billion. Order intake was driven by orders for production tranche 3a of Eurofighter and the Saudi border surveillance programme.

(1) Including "Other Businesses" and "Headquarters/Consolidation".

2.1.4.2 USE OF EBIT*

EADS uses EBIT pre-goodwill impairment and exceptionals as a key indicator of its economic performance. The term "exceptionals" refers to such items as depreciation expenses of fair value adjustments relating to the EADS merger, the Airbus combination and the formation of MBDA, as well

as impairment charges thereon. It also comprises disposal impacts related to goodwill and fair value adjustments resulting from these transactions.

Set forth below is a table reconciling EADS' profit (loss) before finance costs and income taxes (as reflected in EADS' consolidated income statement) with EADS' EBIT*.

(in €m)	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Profit (loss) before finance costs and income taxes	(380)	2,772	(33)
Disposal of goodwill/subsequent adjustment to goodwill	-	-	12
Exceptional depreciation	56	52	49
Exceptional disposal (fixed assets)	2	6	24
EBIT*	(322)	2,830	52

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

2.1.4.3 EBIT* PERFORMANCE BY DIVISION

Set forth below is a breakdown of EADS' consolidated EBIT* by division for the past three years.

(in €m)	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Airbus ⁽¹⁾	(1,371)	1,815	(881)
Airbus Commercial	386	2,306	--
Airbus Military	(1,754)	(493)	--
Military Transport Aircraft ⁽¹⁾	--	--	(155)
Eurocopter	263	293	211
Astrium	261	234	174
Defence & Security	449	408	345
Total divisional EBIT*	(398)	2,750	(306)
Other Businesses ⁽²⁾	21	43	84
HQ/Consolidation ⁽³⁾	52	37	274
Total	(322)	2,830	52

(1) Following integration of Airbus Military into Airbus, Airbus reports in two segments as of 2009: Airbus Commercial and Airbus Military. The Airbus Commercial perimeter includes EFW and the completed aerostructures reorganisation but now excludes the A400M. Airbus Military includes the former MTA division as well as all A400M activity. Eliminations between Airbus Commercial and Airbus Military are treated at the Airbus Division level. Figures for 2008 (but not 2007) have been restated accordingly, except for the Augsburg site transferred from the DS division. See "—2.1.2 Overview".

(2) As of 2009, the composition of "Other Businesses" differs compared to 2008. Since EADS currently holds only a minority stake in Socata, this unit is now consolidated at equity within EADS' accounts. Also as of 2009, EADS EFW is consolidated within Airbus Commercial. Therefore, "Other Businesses" in 2009 consists of ATR, EADS Sogerma, EADS North America and 30% of Socata at equity. Figures for 2008 (but not for 2007) have been adjusted to reflect the consolidation of EADS EFW within Airbus Commercial. See "—2.1.2 Overview".

(3) HQ/Consolidation includes results from headquarters, which mainly consist of the "share of profit from associates accounted for under the equity method" from EADS' investment in Dassault Aviation.

2009 compared to 2008. EADS' consolidated EBIT* decreased from €2.8 billion for 2008 to €-0.3 billion for 2009, primarily reflecting the decreased EBIT* at Airbus. Partially offsetting the decrease was an improvement in EBIT* at Astrium and the DS division in 2009.

Airbus' EBIT* decreased from €1.8 billion for 2008 to €-1.4 billion for 2009, due to a decline at both Airbus Commercial and Airbus Military. Airbus Commercial's EBIT* decreased from €2.3 billion for 2008 to €0.4 billion for 2009, primarily due to (i) an approximate €-2.5 billion negative impact of exchange rate effects compared to 2008, (ii) an approximate €-0.4 billion deterioration in the price of delivered aircraft net of escalation, and (iii) cost increases, including an increase in research and development costs in connection with the ramp-up on the A350 programme. The negative exchange rate effects related to (x) revaluation of loss-making contract provisions which had a negative effect of €-0.9 billion compared to 2008, (y) generally less favourable rates of hedges that matured in 2009 as compared to 2008, which had a negative effect of €-0.9 billion, and (z) other currency translation adjustments, including those related to the mismatch between US dollar-denominated customer advances and corresponding US dollar-denominated costs, which had a negative effect of €-0.7 billion compared to 2008. See "— 2.1.3.7 Foreign Currency Translation". This decrease in 2009 EBIT* at Airbus Commercial was partially offset by (i) good underlying business performance,

including an increase in the number of aircraft delivered (498 in 2009, as compared to 483 in 2008), although A380 continued to weigh significantly on underlying performance due to inefficiencies and excess capacity due to the lower level of deliveries, (ii) lower loss-making contract provision charges on A380 in 2009, and (iii) savings from Power8. See "— 2.1.2.1 Significant Programme and Restructuring Developments in 2007, 2008 and 2009".

Airbus Military's EBIT* decreased from €-0.5 billion for 2008 to €-1.8 billion for 2009, primarily due to the A400M charges of €-1.8 billion in 2009 compared to charges of €-0.5 billion in 2008 and a weaker mix in medium and light aircraft activities. The decrease was partially offset by higher tanker activity in 2009.

Eurocopter's EBIT* decreased by 10.2%, from €293 million for 2008 to €263 million for 2009, primarily due to (i) higher research and development expenses for innovation and product investment, (ii) margin pressure on the NH90 programme reflecting qualification and acceptance difficulties despite first process improvements, and (iii) negative foreign exchange impact. The decrease in EBIT* was partially offset by positive contributions from services and cost savings initiatives.

Astrium's EBIT* increased by 11.5%, from €234 million for 2008 to €261 million for 2009, primarily due to the increased productivity in earth observation satellites and Ariane 5

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

1

2

3

4

5

Back to Contents

production as well as growth in telecommunications services. The increase was partially offset by negative exchange rate effects as a result of the decline in the pound sterling versus the euro.

The DS division's EBIT* increased by 10.0%, from €408 million for 2008 to €449 million for 2009, primarily due to a combination of growth and margin improvements on core and export in the areas of military aircraft systems and missile programmes as well as operational improvements. The increase was partially offset by higher research and development expenses in areas such as radar and unmanned aerial vehicles, as well as by the carve-out of the Augsburg aerostructures activity from the DS division in 2009.

The EBIT* of Other Businesses decreased by 51.2%, from €43 million for 2008 to €21 million for 2009. A positive cost evolution at Sogerma was more than offset by negative exchange rate effects at ATR and a lower EBIT* at EADS North America.

2008 compared to 2007. EADS' consolidated EBIT* increased from €0.1 billion for 2007 to €2.8 billion for 2008, primarily reflecting the increased EBIT* at Airbus. Also contributing to the increase was an improvement in EBIT* at the Group's other operating divisions.

Airbus' EBIT* increased from €-0.9 billion for 2007 (excluding the former MTA division) to €1.8 billion for 2008 (as restated), primarily reflecting (i) good underlying business performance, including an increase in the number of aircraft delivered (483 in 2008, as compared to 453 in 2007) and savings from Power8, and (ii) lower programme and restructuring charges than in 2007. Also contributing to the increase in EBIT* was an approximate €0.7 billion positive impact of exchange rate effects compared to 2007 relating to (x) revaluation of loss-making contract provisions which had a positive effect of €1.3 billion compared to 2007, partially offset by (y) generally less favourable rates of hedges that matured in 2008 as compared to 2007 which had a negative effect of €-0.1 billion and (z) other currency translation adjustments (€-0.5 billion), including those related to the mismatch between US dollar-denominated customer advances and corresponding US dollar-denominated costs. The increase in 2008 EBIT* was partially offset by (i) the impact of the A400M programme, (ii) an increased level of recurring costs recorded in respect of the A380 programme, reflecting the continued challenges that Airbus faces on the ramp-up in industrial production, and (iii) approximately €-0.3 billion deterioration in the price of delivered aircraft. Airbus' EBIT* in 2008 reflected a negative contribution of €-16 million from the former MTA division.

The Eurocopter division's EBIT* increased by 38.9%, from €211 million for 2007 to €293 million for 2008, primarily reflecting strong growth in deliveries (588 in 2008, as compared

to 488 in 2007) and a favourable mix effect. The increase in EBIT* was partially offset by negative foreign exchange rate effects and higher research and development expenses, mainly related to the joint development of the EC175 civil helicopter with China.

Astrium's EBIT* increased by 34.5%, from €174 million for 2007 to €234 million for 2008, primarily reflecting increased productivity and a ramp-up in production at Astrium Space Transportation, as well as an increased contribution from services due to the consolidation of Spot Image within Astrium's accounts (see "— 2.1.3.1 Scope of and Changes in Consolidation Perimeter") which had a positive EBIT* impact of €16 million, as well as a decrease in research and development expenses in 2008 as a result of R&D tax credits. The increase in EBIT* was partially offset by negative foreign exchange rate effects as a result of the decline in the pound sterling versus the euro.

The DS division's EBIT* increased by 18.3%, from €345 million for 2007 to €408 million for 2008, due primarily to profitability improvement across all businesses. Maturing programmes – such as missiles, radar and secure networks – drove such improvement, as did further cost reduction initiatives and lower restructuring costs.

The EBIT* of Other Businesses decreased from €84 million for 2007 to €43 million for 2008, due primarily to the consolidation of EADS EFW within Airbus Commercial from 2009 onwards (with 2008 figures restated), as well as negative foreign exchange effects. EBIT* decreased at ATR and Socata in 2008 while increasing at EADS Sogerma.

Foreign Currency Impact on EBIT*. More than 60% of EADS' consolidated revenues in 2009 were denominated in US dollars. Given the long-term nature of its business cycles (evidenced by its multi-year backlog), EADS hedges a significant portion of its net foreign exchange exposure to mitigate the impact of exchange rate fluctuations on its EBIT*. See "— 2.1.8.1 Foreign Exchange Rates" and "Risk Factors – 1. Financial Market Risks – Exposure to Foreign Currencies". In addition to the impact that hedging activities have on EADS' EBIT*, the latter is also affected by the impact of revaluation of certain assets and liabilities at the closing rate.

During 2009, cash flow hedges covering approximately US\$ 16.5 billion of EADS' US dollar-denominated revenues matured. In 2009, the compounded exchange rate at which hedged US dollar-denominated revenues were accounted for was €-US\$ 1.26, as compared to €-US\$ 1.18 in 2008. This difference resulted in an approximate €-0.9 billion decrease in EBIT* from 2008 to 2009, of which approximately €-0.9 billion was at Airbus. In addition, the revaluation of loss-making contract provisions had a negative effect of €-0.9 billion on EBIT*

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

compared to 2008, while other currency translation adjustments, including those related to the mismatch between US dollar-denominated customer advances and corresponding US dollar-denominated costs, had a negative effect of €-0.7 billion on EBIT* compared to 2008.

During 2008, cash flow hedges covering approximately US\$ 16.4 billion of EADS' US dollar-denominated revenues matured. In 2008, the compounded exchange rate at which hedged US dollar-denominated revenues were accounted for was €-US\$ 1.18, as compared to €-US\$ 1.16 in 2007. This difference

resulted in an approximate €-0.2 billion decrease in EBIT* from 2007 to 2008, of which approximately three-quarters was at Airbus. In addition, foreign currency effects on EBIT*, including those related to the mismatch between US dollar-denominated customer advances and corresponding US dollar-denominated costs, resulted in an approximate €-0.5 billion decrease in EBIT* compared to 2007. These decreases were more than offset by the revaluation of loss-making contract provisions related to the significant impact of US dollar and pound sterling which had a positive effect of €1.3 billion compared to 2007.

2.1.5 EADS Results of Operations

The following table sets forth a summary of EADS' consolidated income statements for the past three years.

Consolidated Income Statements (IFRS) for the years ended 31 December 2009, 2008 and 2007

(in €m, except for earnings (losses) per share)	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Revenues	42,822	43,265	39,123

CONSOLIDATED REVENUES

Consolidated revenues decreased by 1.0% in 2009 to €42.8 billion, as compared to €43.3 billion for 2008. The decrease was primarily due to lower revenues at Airbus and Other Businesses during 2009, partially offset by revenue increases at Astrium and Eurocopter.

Set forth below is a breakdown of EADS' consolidated revenues by division for the past three years.

(in €m)	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Airbus ⁽¹⁾	28,067	28,991	25,216
<i>Airbus Commercial</i>	26,370	26,524	-
<i>Airbus Military</i>	2,235	2,759	-
Military Transport Aircraft ⁽¹⁾	-	-	1,140
Eurocopter	4,570	4,486	4,172
Astrium	4,799	4,289	3,550
Defence & Security	5,363	5,668 ⁽⁴⁾	5,392
Total divisional revenues	42,799	43,434	39,470
Other Businesses ⁽²⁾	1,096	1,338	1,407
HQ/Consolidation ⁽³⁾	(1,073)	(1,507)	(1,754)
Total	42,822	43,265	39,123

(1) Following integration of Airbus Military into Airbus, Airbus reports in two segments as of 2009: Airbus Commercial and Airbus Military. The Airbus Commercial perimeter includes EFW and the completed aerostructures reorganisation but now excludes the A400M. Airbus Military includes the former MTA division as well as all A400M activity. Eliminations between Airbus Commercial and Airbus Military are treated at the Airbus Division level. Figures for 2008 (but not 2007) have been restated accordingly, except for the Augsburg site transferred from the DS division. See "—2.1.2 Overview".

(2) As of 2009, the composition of "Other Businesses" differs compared to 2008. Since EADS currently holds only a minority stake in Socata, this unit is now consolidated at equity within EADS' accounts. Also as of 2009, EADS EFW is consolidated within Airbus Commercial. Therefore, "Other Businesses" in 2009 consists of ATR, EADS Sogerma, EADS North America and 30% of Socata at equity. Figures for 2008 (but not for 2007) have been adjusted to reflect the consolidation of EADS EFW within Airbus Commercial. See "—2.1.2 Overview".

(3) HQ/Consolidation includes, in particular, adjustments and eliminations for intercompany transactions.

(4) Augsburg site's revenues are included in the DS division in 2008 and amounted to € 438 million. As of 2009, the Augsburg site is consolidated within Airbus Commercial. See "—2.1.2 Overview".

Airbus

Airbus' consolidated revenues decreased by 3.2% in 2009 to €28.1 billion, as compared to €29.0 billion for 2008. The decrease was primarily due to lower revenues at Airbus Military, as well as a small decrease in revenues at Airbus Commercial.

Airbus Commercial

Set forth below is a breakdown of deliveries of commercial aircraft by product type for the past three years.

Number of aircraft	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Single Aisle	402	386	367
Widebody	-	-	6
Long-Range	86	85	79
Large Aircraft	10	12	1
Total	498	483	453

Airbus Commercial's consolidated revenues decreased by 0.6%, from €26.5 billion for 2008 to €26.4 billion for 2009. This slight decrease was primarily due to (i) an approximate €-0.4 billion deterioration in the price of delivered aircraft net of escalation, (ii) an approximate €-0.4 billion negative impact of exchange rate effects and (iii) a decrease in Hawker activity. For a discussion of the impact of exchange rate variations on EADS' results of operations, see "— 2.1.3.6 Accounting for Hedged

Foreign Exchange Transactions in the Financial Statements", "— 2.1.3.7 Foreign Currency Translation", "— 2.1.8.1— Foreign Exchange Rates" and "Risk Factors — 1. Financial Market Risks — Exposure to Foreign Currencies".

Partially offsetting this revenue decrease were higher aircraft deliveries (498 in 2009 as compared to 483 in 2008), in particular single-aisle A318/A319/A320/A321 aircraft.

Airbus Military

Set forth below is a breakdown of deliveries of military transport aircraft by product type for the past three years.

Number of aircraft	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
CN-235	4	7	7
C-212	-	1	-
C-295	12	11	7
P-3	-	-	1
Total	16	19	15

Airbus Military's consolidated revenues decreased by 19.0%, from €2.8 billion for 2008 to €2.2 billion for 2009. The decrease was primarily due to €-1.0 billion in lower revenue recognition on the A400M programme in 2009, with 2008 figures benefiting

from the A400M power-on milestone and the initial application of early stage accounting. Partially offsetting this decrease was an increase in revenues from tanker and medium and light aircraft activities during 2009.

Eurocopter

Set forth below is a breakdown of deliveries of helicopters by product type for the past three years.

Number of aircraft	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Tiger	7	15	10
Light	284	302	275
Medium	219	229	172
Heavy	48	42	31
<i>of which NH90</i>	15	14	8
Total	558	588	488

For 2009, consolidated revenues of Eurocopter increased by 1.9%, from €4.5 billion for 2008 to €4.6 billion for 2009, despite an overall decrease in helicopter deliveries from 588 in 2008 to 558 in 2009. The increase was primarily due to a favourable mix in serial helicopter deliveries and growth in customer services, partially offset by lower governmental and development revenues.

For 2008, consolidated revenues of Eurocopter increased by 7.5%, from €4.2 billion for 2007 to €4.5 billion for 2008, primarily reflecting an overall increase in helicopter deliveries from 488 in 2007 to 588 in 2008, as well as growth in customer services and development activities.

Astrium

Set forth below is a breakdown of deliveries of telecommunications satellites for the past three years.

Telecommunications Satellites	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
	4	6	2

For 2009, consolidated revenues of Astrium increased by 11.9%, from €4.3 billion for 2008 to €4.8 billion for 2009. The increase was due to revenue growth across all business units and included a non-operational catch-up effect (€ +0.2 billion) for in-orbit incentive schemes on commercial telecommunication satellites with low margin recognition.

For 2008, consolidated revenues of Astrium increased by 20.8%, from €3.6 billion for 2007 to €4.3 billion for 2008. The increase was primarily due to higher deliveries of commercial telecommunication satellites, ramp-up in Ariane 5 production and an increase in earth observation services. The increase in revenues also reflects the consolidation of Spot Image in 2008.

5

Back to Contents

Defence & Security

For 2009, consolidated revenues of the DS division decreased by 5.4%, from €5.7 billion for 2008 to €5.4 billion for 2009. The decrease primarily reflects the carve-out of the Augsburg aerostructures activity from the DS division in 2009 (€-0.4 billion). This was partially offset by higher revenues from a ramp-up in tranche 2 production and export deliveries for Eurofighter as well as integrated logistics support.

For 2008, consolidated revenues of the DS division amounted to €5.7 billion. Eurofighter, radar and missiles businesses represent the majority of the revenues. The increase of 5.1% from €5.4 billion for 2007 primarily reflects further development of integrated security systems, secure networks and UAVs, as well as the shift to early stage accounting for the A400M programme which yielded a revenue increase of €171 million compared to 2007. The increase in revenues also reflects the acquisition of PlantCML in 2008.

Other Businesses

For 2009, consolidated revenues of Other Businesses decreased by 18.1%, from €1.3 billion for 2008 to €1.1 billion for 2009. The decrease mainly reflects the change in consolidation perimeter following the sale of 70% of Socata to Daher in January 2009. See “—2.1.3.1 Scope of and Changes in Consolidation Perimeter”.

CONSOLIDATED COST OF SALES

For 2009, consolidated cost of sales increased by 6.9%, from €35.9 billion for 2008 to €38.4 billion for 2009. The increase was primarily due to the higher loss-making contract provision recorded in respect of the A400M programme and negative foreign exchange effects, partially offset by the lower loss-making contract charges recorded in respect of the A380 programme, additional Power8 savings in 2009 and positive contributions from the DS division and Astrium. See “— 2.1.2.1 Significant Programme and Restructuring Developments in 2007, 2008 and 2009. Consolidated cost of sales also includes the amortisation of capitalised development costs pursuant to IAS 38, which amounted to €-146 million in 2009 compared to €-56 million in 2008. Mainly as a result of the above stated items as well as a deterioration in prices for delivered A330 aircraft and a negative dollar effect at Airbus in respect of revenues, the gross margin decreased from 17.0% in 2008 to 10.4% in 2009.

For 2008, consolidated cost of sales increased by 3.2%, from €34.8 billion for 2007 to €35.9 billion for 2008. The increase was primarily due to the higher number of aircraft deliveries and the shift to early stage accounting for the A400M programme, partially offset by lower programme and restructuring charges than in 2007 and foreign exchange effects from natural hedging. Consolidated cost of sales also includes the amortisation of

capitalised development costs pursuant to IAS 38, which amounted to €-56 million in 2008. Mainly as a result of the above stated items and despite a negative dollar effect at Airbus in respect of revenues, the gross margin increased from 11.0% in 2007 to 17.0% in 2008.

CONSOLIDATED SELLING AND ADMINISTRATIVE EXPENSES

For 2009, consolidated selling and administrative expenses remained stable, at the 2008 level of €2.2 billion. Higher expenses at Airbus and Astrium (primarily related to consolidation effects) were largely offset by lower expenses at the DS division and at Other Businesses. See “— 2.1.2.1 Significant Programme and Restructuring Developments in 2007, 2008 and 2009”.

For 2008, consolidated selling and administrative expenses remained stable, at the 2007 level of €2.2 billion. Higher expenses at Astrium (primarily related to services growth and the consolidation of Spot Image), the former MTA division (related to activity growth) and other areas were largely offset by the absence of Power8 restructuring expenses recorded at Airbus in 2007.

CONSOLIDATED RESEARCH AND DEVELOPMENT EXPENSES

For 2009, consolidated research and development (“R&D”) expenses increased by 5.8%, from €2.7 billion for 2008 to €2.8 billion for 2009. The increase was primarily due to higher expenses at Airbus, due to development on the A350 XWB programme, and to a lesser extent, higher expenses at Eurocopter and the DS division for innovation and product investment. This increase was partially offset by less R&D for the A380 programme. See “— 2.1.3.5 Research and Development expenses”.

For 2008, consolidated R&D expenses increased by 2.3%, from €2.6 billion for 2007 to €2.7 billion for 2008. Most of the increase was attributable to higher expenses at Airbus and Eurocopter, due to development on the A350 XWB and various helicopter programmes. This increase was partially offset by less R&D for the A380 programme and at the other divisions as well as higher R&D tax credits.

CONSOLIDATED OTHER INCOME AND OTHER EXPENSES

Consolidated other income and other expenses represent gains and losses on disposals of investments in fixed assets and income from rental properties.

For 2009, the net of other income and other expenses was positive €68 million as compared to positive €58 million for 2008. The increase was mainly attributable to the gain from disposal of the Filton site in 2009, partially offset by various other items.

For 2008, the net of other income and other expenses was positive €58 million as compared to positive €136 million for 2007. The decrease was mainly attributable to gains from sale of land and buildings in France and Germany recorded in 2007.

CONSOLIDATED SHARE OF PROFIT FROM ASSOCIATES ACCOUNTED FOR UNDER THE EQUITY METHOD AND OTHER INCOME FROM INVESTMENTS

Consolidated share of profit from associates accounted for under the equity method and other income from investments principally includes results from companies accounted for under the equity method and the results attributable to non-consolidated investments.

For 2009, EADS recorded €134 million in consolidated share of profit from associates accounted for under the equity method and other income from investments as compared to €211 million for 2008. The €-77 million decrease primarily reflects the reduced contribution from EADS' equity investment in Dassault Aviation. See "Notes to the Consolidated Financial Statements (IFRS) — Note 11: Share of profit from associates accounted for under the equity method and other income from investments".

For 2008, EADS recorded €211 million in consolidated share of profit from associates accounted for under the equity method and other income from investments as compared to €296 million for 2007. The €-85 million decrease primarily reflects the reduced contribution from EADS' equity investment in Dassault Aviation, including the absence of an IFRS catch-up in 2008, as well as the one-off gain from EADS' sale of its 2.13% interest in Embraer in 2007.

CONSOLIDATED INTEREST RESULT

Consolidated interest result reflects the net of interest income and expense arising from financial assets and liabilities, including interest expense on refundable advances provided by European governments to finance R&D activities.

For 2009, EADS recorded a consolidated net interest expense of €-147 million, as compared to a consolidated net interest result of €36 million for 2008. The decrease is due primarily to a decline in interest rates paid on EADS' net cash balance during 2009, partially offset by lower interest expense paid on the Group's financing liabilities.

For 2008, EADS recorded a consolidated net interest result of €36 million, as compared to a consolidated net interest expense of €-199 million for 2007. The improvement is due primarily to a higher average net cash balance held during 2008 and an increase in investments in short- and medium-term securities.

CONSOLIDATED OTHER FINANCIAL RESULT

For 2009, consolidated other financial result improved to €-445 million from €-508 million for 2008. This positive €63 million change results from the improvement in the impact of revaluation changes of US dollar- and pound sterling-denominated cash balances on the euro-denominated balance sheets of Group companies, as well as from the effect of the mark-to-market valuation of "embedded derivatives". "Embedded derivatives" are financial instruments that, for accounting purposes, are deemed to be embedded in US dollar-denominated purchase orders of equipment, where the US dollar is not conclusively the currency in which the price of the related equipment is routinely denominated in international commerce and is not the functional currency of any of the parties to the transaction. See "Notes to the Consolidated Financial Statements (IFRS) — Note 12: Total finance costs". This line item also includes the negative effects from the unwinding of discounts on provisions, as well as the valuation of the premium paid for US dollar options used for foreign exchange hedging.

For 2008, consolidated other financial result improved to €-508 million from €-538 million for 2007. This positive €30 million change primarily results from (i) a €-28 million negative effect in 2008 from valuation changes of US dollar- and pound sterling-denominated cash balances on the euro-denominated balance sheets of Group companies, compared to a €-274 million negative effect in 2007, (ii) the €-230 million negative effect in 2008 from the unwinding of discounts on provisions recorded primarily at Airbus, compared to a €-202 million negative effect in 2007, and (iii) a negative €-121 million effect from the mark-to-market valuation of "embedded derivatives", compared to a negative €-5 million effect in 2007.

CONSOLIDATED INCOME TAXES

For 2009, income taxes yielded a €220 million benefit, compared to a €-703 million expense in 2008. The benefit was due to the taxable loss of €-972 million recorded in 2009, as compared to the taxable income of €2,300 million recorded in the previous year. The effective tax rate was 23% in 2009 reflecting some impairment of tax assets. See "Notes to the Consolidated Financial Statements (IFRS) — Note 13: Income taxes".

For 2008, income taxes yielded a €-703 million expense, compared to a €333 million benefit in 2007. The expense was due to the taxable income of €2,300 million recorded in 2008, as compared to a taxable loss of €-770 million recorded in the previous year. The effective tax rate was 31% in 2008.

Back to Contents

CONSOLIDATED NON-CONTROLLING INTERESTS

For 2009, consolidated non-controlling interests were €11 million, as compared to €25 million for 2008. The decrease of non-controlling interests for 2009 primarily relates to the decrease in non-controlling interest in the results of subsidiaries of Airbus Financial Services.

For 2008, consolidated non-controlling interests were €25 million, as compared to €9 million for 2007. The increase of non-controlling interests for 2008 primarily relates to the increase in non-controlling interest in the results of Airbus Financial Services, and the non-controlling interest recorded in respect of Spot Image following its initial consolidation. See “— 2.1.3.1 Scope of and Changes in Consolidation Perimeter”.

CONSOLIDATED NET INCOME (LOSS) (PROFIT (LOSS) FOR THE PERIOD ATTRIBUTABLE TO EQUITY OWNERS OF THE PARENT)

As a result of the factors discussed above, EADS recorded a consolidated net loss of €-763 million for 2009, as compared to a consolidated net income of €1,572 million for 2008 and a consolidated net loss of €-446 million for 2007.

EARNINGS PER SHARE (EPS)

Basic earnings per share decreased by €-2.89 per share, from a profit of €1.95 per share in 2008 to a loss of €-0.94 per share in 2009. The number of outstanding shares at 31 December 2009 was 810,908,611. The denominator used to calculate EPS was 809,698,631 shares, reflecting the weighted average number of shares outstanding during the year. In 2007, EADS reported a basic loss per share of €-0.56.

Diluted earnings per share decreased by €-2.89 per share, from a profit of €1.95 per share in 2008 to a loss of €-0.94 per share in 2009. The denominator used to calculate diluted EPS was 811,190,113, reflecting the weighted average number of shares outstanding during the year, adjusted to assume the conversion of all potential ordinary shares. In 2007, EADS reported a diluted loss per share of €-0.55.

See “Notes to the Consolidated Financial Statements (IFRS) — Note 24: Total equity” and “— Note 39: Earnings per share”.

2.1.6 Changes in Consolidated Total Equity (including Non-controlling Interests)

The following table sets forth a summary of the changes in consolidated total equity for the period 1 January 2009 through 31 December 2009.

(in €m)

Balance at 31 December 2008	11,126
Actuarial gains and losses	(483)
Accumulated other comprehensive income	890
<i>Thereof currency translation adjustments</i>	(262)
Profit (loss) for the period	(752)
Capital increase	17
Share-based payments (IFRS 2)	19
Cash distribution to EADS N.V. shareholders/dividends paid to non-controlling interests	(166)
Change in non-controlling interests	(5)
Change in treasury shares	(5)
Balance at 31 December 2009	10,641

The decrease in consolidated total equity in 2009 primarily reflects the loss for the period and changes in actuarial gains and losses. These were partially offset by changes in accumulated other comprehensive income (“**AOCI**”). Set forth below is a discussion of AOCI and its impact on consolidated total equity. For a discussion of the other line items affecting consolidated total equity, see “Consolidated Financial Statements (IFRS) of EADS — Consolidated Statements of Changes in Equity (IFRS) for the years ended 31 December 2009, 2008 and 2007”.

In 2009, AOCI increased by €890 million. The change in AOCI was primarily due to the positive variation (net of tax) of the year-end mark-to-market valuation of that portion of EADS’ hedge portfolio qualifying for cash flow hedge accounting under IAS 39.

IAS 39 RELATED IMPACT ON AOCI

At 31 December 2009, the notional amount of the outstanding portfolio of hedges qualifying for IAS 39 hedge accounting treatment (“**cash flow hedges**”) amounted to approximately US\$ 60.8 billion hedged against the euro and the pound sterling. The year-end mark-to-market valuation of EADS’ portfolio of cash flow hedges resulted in a positive pre-tax AOCI valuation change of € 1.5 billion from 31 December 2008, based on a closing rate of €-US\$ 1.44, as compared to a negative pre-tax AOCI valuation change of €-5.4 billion at 31 December 2008 from 31 December 2007, based on a closing rate of €-US\$ 1.39.

Positive pre-tax mark-to-market values of cash flow hedges are included in other financial assets, while negative pre-tax mark-to-market values of cash flow hedges are included in other financial liabilities. Year-to-year changes in the mark-to-market value of cash flow hedges are recognised as adjustments to AOCI. These adjustments to AOCI are net of corresponding changes to deferred tax assets (for cash flow hedges with negative mark-to-market valuations) and deferred tax liabilities (for cash flow hedges with positive mark-to-market valuations). Set out below is a graphic presentation of cash flow hedge related movements in AOCI over the past three years (in €m).

Related movements in AOCI in €m

As a result of the positive change in the fair market valuation of the cash flow hedge portfolio in 2009, AOCI amounted to a net asset of € 1.2 billion for 2009, as compared to a net liability of €-0.3 billion for 2008. The corresponding €-0.5 billion tax effect led to a net deferred tax liability of €-0.4 billion at 31 December 2009 as compared to a net deferred tax asset of €0.1 billion at 31 December 2008.

CURRENCY TRANSLATION ADJUSTMENT IMPACT ON AOCI

The €-262 million currency translation adjustment (CTA) related impact on AOCI in 2009 mainly reflects the negative effect of the weakening US dollar and the strengthening pound sterling (in total negative €-154 million), as well as the consequences (negative €-75 million) of the merger of Airbus GIE (a US dollar-

denominated entity) into Airbus S.A.S. (a euro-denominated entity). Before the merger, Airbus GIE operations were recorded at the current exchange rate of the period except for those hedged with financial instruments. As from 1 January 2004, former Airbus GIE operations are recorded on the basis of historical exchange rates. As a result, no additional CTA is generated by former Airbus GIE operations. The portion of outstanding CTA as at 31 December 2003, booked in respect of non-monetary balance sheet items relating to transactions realised as from 1 January 2004 (*i.e.*, mainly aircraft deliveries), is gradually released to the consolidated income statement, in line with such deliveries. See “— 2.1.3.7 Foreign Currency Translation”.

2.1.7 Liquidity and Capital Resources

The Group's objective is to maintain sufficient cash and cash equivalents at all times to meet its present and future cash requirements and maintain a favourable credit rating. It attempts to achieve this policy objective by:

- implementing measures designed to generate cash;
- developing and maintaining access to the capital markets; and
- containing its exposure to customer financing.

EADS benefits from a strong positive cash position, with €15.1 billion of consolidated gross cash (including securities of €8.1 billion) at 31 December 2009. EADS defines its consolidated net cash position as the difference between (i) cash and cash equivalents, (ii) securities, and (iii) financing liabilities (as recorded in the consolidated statement of financial position). The net cash position at 31 December 2009 was €9.8 billion (€9.2 billion at 31 December 2008).

This cash position is further supported by a €3.0 billion syndicated back-up facility, undrawn as at 31 December 2009 with no financial covenants, as well as a Euro medium term note programme and commercial paper programme, as described below. The factors affecting EADS' cash position, and consequently its liquidity risk, are discussed below.

2.1.7.1 CASH FLOWS

EADS generally finances its manufacturing activities and product development programmes, and in particular the development of new commercial aircraft, through a combination of flows generated by operating activities, customer advances, risk-sharing partnerships with sub-contractors and European government refundable advances. In addition, EADS' military activities benefit from government-financed R&D contracts. If necessary, EADS may raise funds in the capital markets.

The following table sets forth the variation of EADS' consolidated net cash position over the periods indicated.

(in €m)	Year ended 31 December 2009	Year ended 31 December 2008	Year ended 31 December 2007
Consolidated net cash position at 1 January	9,193	7,024	4,229
Gross cash flow from operations ⁽¹⁾	2,423	4,571	3,862
Changes in other operating assets and liabilities (working capital) ⁽²⁾	15	(172)	1,236
<i>Thereof customer financing</i>	<i>(406)</i>	<i>(327)</i>	<i>61</i>
<i>Thereof Paradigm refinancing</i>	<i>(22)</i>	<i>58</i>	<i>1,158</i>
Cash used for investing activities ⁽³⁾	(1,853)	(1,840)	(1,744)
<i>Thereof industrial capital expenditures</i>	<i>(1,957)</i>	<i>(1,837)</i>	<i>(2,028)</i>
<i>Thereof others</i>	<i>104</i>	<i>(3)</i>	<i>284</i>
Cash distribution to shareholders/non-controlling interests	(166)	(107)	(98)
Capital increase	17	24	46
Change in treasury shares	(5)	39	-
Contribution to plan assets of pension schemes	(173)	(436)	(303)
Other changes in financial position	346	90	(204)
Consolidated net cash position at 31 December	9,797	9,193	7,024
Free cash flow⁽³⁾	585	2,559	3,354
<i>Thereof free cash flows before customer financing</i>	<i>991</i>	<i>2,886</i>	<i>3,293</i>

(1) Represents cash flow from operations, excluding variations in working capital.

(2) Including cash outflows of €302 million for option premiums in 2008.

(3) Does not reflect (i) investments in, or disposals of, available-for-sale securities (addition of €(2,641) million for 2007; addition of €(2,676) million for 2008; addition of €(821) million for 2009), which are classified as cash and not as investments solely for the purposes of this net cash presentation; (ii) changes in cash from changes in consolidation (€(249) million for 2007); or (iii) contribution to plan assets of pension schemes (€(303) million for 2007; €(436) million for 2008; €(173) million for 2009).

The consolidated net cash position at 31 December 2009 was €9.8 billion, a 6.6% increase from 31 December 2008. The increase primarily reflects the €2.4 billion gross cash flow from operations, partially offset by cash used for investing activities (€-1.9 billion) as well as other items.

Gross Cash Flow from Operations

Gross cash flow from operations decreased by 47.0% to €2.4 billion for 2009, primarily as a result of the lower earnings generated during the year.

Changes in Other Operating Assets and Liabilities (Working Capital)

Working capital is comprised of inventory, trade receivables, other assets and prepaid expenses netted against trade liabilities, other liabilities (including customer advances), deferred income and customer financing. Changes in working capital resulted in a slight positive impact on the net cash position for 2009 (€15 million) and a negative impact on the net cash position for 2008 (€-0.2 billion). In 2009, the main net contributor to the positive working capital variation was pre-delivery payments from customers (€2.9 billion), which decreased moderately at Airbus compared to 2008 as expected due to lower commercial activity while increasing across the other divisions due to the strong inflow of institutional orders. This positive variation within the year was almost entirely offset by (i) the change

in inventory (€-2.0 billion), reflecting inventory growth across all divisions, in particular at Airbus, (ii) the change in trade receivables (€-0.5 billion), and (iii) customer financing (€-0.4 billion).

In 2008, the main net contributors to the negative working capital variation were (i) the change in inventory (€-1.2 billion), reflecting inventory growth in Airbus, Eurocopter and the DS division, and (ii) the change in other assets and liabilities (€-1.0 billion), primarily reflecting the payment for option premiums (€-0.3 billion) and (iii) customer financing (€-0.3 billion). The negative working capital variation within the year was almost entirely offset by pre-delivery payments from customers (€2.4 billion), approximately half of which resulted from customer payments at non-Airbus divisions.

European Government Refundable Advances. As of 31 December 2009, total European government refundable advances received, recorded on the statement of financial position in the line items "non-current other financial liabilities" and "current other financial liabilities", amounted to €5.3 billion, including accrued interest.

For 2009, new receipts of European government refundable advances totalled €0.4 billion and reimbursements totalled €-0.4 billion. Related accrued interest of €-0.2 billion was recorded in 2009.

Set out below is a breakdown of the total amount of European government refundable advances outstanding, by product/project.

(in € bn)	2009	2008	2007
Long Range & Wide Body	1.2	1.1	1.3
A380	3.6	3.4	3.5
Eurocopter	0.2	0.1	0.2
Others	0.3	0.3	0.3
Total	5.3	4.9	5.3

Cash Used for Investing Activities

Management categorises cash used for investing activities into two components: (i) industrial capital expenditures, and (ii) others.

Industrial Capital Expenditures. Industrial capital expenditures (investments in property, plant and equipment and intangible assets) amounted to €2.0 billion for 2009, as compared to €1.8 billion for 2008 and €2.0 billion for 2007. Capital expenditures in 2009 related to programmes at Airbus of €1.3 billion (relating primarily to the A350 XWB) and additional projects in the other divisions of €0.7 billion, including Astroterra at Astrium and the EC175 at Eurocopter.

For the period 2010 to 2011, it is expected that the majority of EADS' capital expenditures will occur in connection with Airbus activities – in particular, for the A350 XWB programme – and be broadly distributed across EADS' home markets of France, Germany, Spain and the UK.

Others. In 2009, the €104 million figure primarily reflects the sale of the Airbus site in Filton (UK) to GKN. In 2008, €-3 million was recorded in this category. In 2007, the €284 million figure primarily reflects the sale of buildings and participations in small entities as well as the sale of Embraer shares.

Free Cash Flow

As a result of the factors discussed above, positive free cash flow amounted to €0.6 billion for 2009, as compared to €2.6 billion for 2008 and €3.4 billion for 2007. Positive free cash flow before customer financing was €1.0 billion for 2009, as compared to €2.9 billion for 2008 and €3.3 billion for 2007.

Contribution to Plan Assets of Pension Schemes

The cash outflow of € -0.2 billion in 2009 primarily relates to plan assets in the UK and to German benefit funds. In 2008, the cash outflow of € -0.4 billion primarily relates to a contribution to the Contractual Trust Arrangement (CTA) for allocating and generating pension plan assets in accordance with IAS 19. In 2007, the cash outflow of € -0.3 billion relates to the implementation of the CTA. See “Notes to the Consolidated Financial Statements (IFRS) — Note 26B: Provisions for retirement plans”. EADS may make additional contributions to plan assets over time in order to reduce the provision for retirement plans on its balance sheet.

Other Changes in Financial Position

In 2009, the positive change of € 346 million reflects among others currency effects on financing liabilities. In 2008, the positive change of €90 million generally mirrors the currency effects on financing liabilities. In 2007, the cash outflow of € -204 million primarily reflects the change in the percentage of proportional consolidation of MBDA from 50% in 2006 to 37.5% in 2007.

2.1.7.2 CONSOLIDATED CASH AND CASH EQUIVALENTS AND SECURITIES

The cash and cash equivalents and securities portfolio of the Group is invested mainly in non-speculative financial instruments, mostly highly liquid, such as certificates of deposit, overnight deposits, commercial paper, other money market instruments and bonds. See “— 2.1.8.2 Interest Rates” and “Notes to the Consolidated Financial Statements (IFRS) — Note 35A: Financial risk management”.

EADS has a fully automated cross-border cash pooling system (covering France, Germany, Spain, the Netherlands, the UK and the US). The cash pooling system enhances management’s ability to assess reliably and instantaneously the cash position of each subsidiary within the Group and enables management to allocate cash optimally within the Group depending upon shifting short-term needs.

Total cash and cash equivalents (including available-for-sale securities) in 2009 included €0.8 billion from the 37.5% consolidation of MBDA, compared to €0.7 billion in 2008 and €0.6 billion in 2007.

2.1.7.3 CONSOLIDATED FINANCING LIABILITIES

The following table sets forth the composition of EADS’ consolidated financing liabilities, including both short-and long-term debt, as of 31 December 2009:

(in €m)	31 December 2009			Total
	Not exceeding 1 year	Over 1 year up to 5 years	More than 5 years	
Bonds	974	-	1,500	2,474
Liabilities to financial institutions	90	629	182	901
Loans	205	237	154	596
Finance Leases	17	49	116	182 ⁽¹⁾
Others	1,143	-	-	1,143
Total	2,429	915	1,952	5,296⁽²⁾

(1) This figure reflects the €306 million effect of the netting of defeased bank deposits against finance lease liabilities.

(2) Financing liabilities include non-recourse Airbus debt for €652 million.

The outstanding balance of financing liabilities increased from €4.5 billion at 31 December 2008 to €5.3 billion at 31 December 2009. Financing liabilities include liabilities connected with sales financing transactions amounting to €733 million at 31 December 2009, most of which bore interest at variable rates. See “— 2.1.7.4 Sales Financing”.

EMTN Programme. EADS currently has a €3 billion Euro Medium Term Note (“EMTN”) Programme in place. In 2003, it conducted an initial €1.0 billion issue of notes maturing in 2010 and bearing interest at 4.625% (effective interest rate:

4.7%), which was later swapped into a variable rate of 3-month EURIBOR plus 1.02%. Later in 2003, it issued an additional €0.5 billion of notes maturing in 2018 and bearing interest at 5.5% (effective interest rate: 5.6%), which was swapped during 2005 into a variable rate of 3-month EURIBOR plus 1.72%.

In 2009, in order to refinance the first EMTN tranche of €1.0 billion that matures in 2010, EADS issued €1.0 billion of notes maturing in 2016 and bearing interest at 4.625% (effective interest rate: 4.6%), which was later swapped into a variable rate of 3-month EURIBOR plus 1.57%.

European Investment Bank Loan. In 2004, the European Investment Bank granted a long-term loan to EADS in the amount of US\$ 421 million at an interest rate of 5.1% (effective interest rate: 5.1%).

Commercial Paper Programme. EADS has the ability to issue commercial paper on a rolling basis, under a so-called “*billet de trésorerie*” programme. This commercial paper would bear interest at fixed or floating rates with individual maturities ranging from 1 day to 12 months. The programme has been in place since 2003 and has a maximum authorised volume limit of €2 billion. As of 31 December 2009, there was no commercial paper outstanding under the programme.

2.1.7.4 SALES FINANCING

EADS favours cash sales, and encourages independent financing by customers, in order to avoid retaining credit or asset risk in relation to delivered products. However, in order to support product sales, primarily at Airbus, Eurocopter and ATR, EADS may agree to participate in the financing of customers, on a case-by-case basis, directly or through guarantees provided to third parties.

In response to the continued demand by its customers for financing and the recent volatility in the financial and credit markets, EADS expects to increase its outlays in connection

with customer financing of commercial aircraft, mostly through finance leases and secured loans. Nevertheless, it intends to keep the amount as low as possible.

Dedicated and experienced teams structure such financing transactions and closely monitor total EADS finance and asset value exposure and its evolution in terms of quality, volume and intensity of cash requirements. EADS aims to structure all financing it provides to customers in line with market-standard contractual terms so as to facilitate any subsequent sale or reduction of such exposure.

In determining the amount and terms of a financing transaction, Airbus and ATR take into account the airline's credit rating as well as risk factors specific to the intended operating environment of the aircraft and its expected future value. Market yields and current banking practices also serve to benchmark the financing terms offered to customers.

Approximately 14% of the €5.3 billion of total consolidated financing liabilities as at 31 December 2009 are derived from the funding of EADS' sales financing assets, which are of a long-term nature and have predictable payment schedules.

Set out below is a breakdown of the total amount of sales financing liabilities outstanding.

(in €m)	2009	2008	2007
Finance Leases	1	14	35
Liabilities to financial institutions	590	664	742
Loans	142	158	183
Total sales financing liabilities	733	836	960

The amounts of total sales financing liabilities at 31 December 2009, 2008 and 2007 reflect the offsetting of sales financing liabilities by €306 million (for 2009), €373 million (for 2008) and €677 million (for 2007). Of the remaining €733 million total sales financing liabilities at 31 December 2009, €652 million is in the form of non-recourse debt, where EADS' repayment obligations are limited to its receipts from transaction counterparties. A significant portion of financial assets representing non-cancellable customer commitments have terms closely matching those of the related financing liabilities. See “Notes to the Consolidated Financial Statements (IFRS) — Note 27: Financing liabilities”. See also “— 2.1.3.8 Accounting for Sales Financing Transactions in the Financial Statements”.

Furthermore, in 1999, Airbus received a reinvestment note from Deutsche Bank AG in the amount of US\$ 800 million, with an outstanding debt of €305 million at 31 December 2009 (2008: €372 million, 2007: €396 million).

Sales financing transactions are generally collateralised by the underlying aircraft. Additionally, Airbus, Eurocopter and ATR benefit from protective covenants and from security packages tailored according to the perceived risk and the legal environment of each transaction.

EADS classifies the exposure arising from its sales financing activities into two categories: (i) Customer Financing Exposure, where the customer's credit – its ability to perform its obligations under a financing agreement – constitutes the risk; and (ii) Asset Value Exposure, where the risk relates to decreases in the future value of the financed aircraft. See also “Risk Factors — 1. Financial Market Risks — Exposure to Sales Financing Risk”.

Customer Financing Exposure

Gross Exposure: Gross Customer Financing Exposure is computed as the sum of (i) the net book value of aircraft under operating leases; (ii) the outstanding principal amount of finance leases or loans; and (iii) the net present value of the maximum commitment amounts under financial guarantees.

Gross Customer Financing Exposure from operating leases, finance leases and loans differs from the value of related assets on EADS' balance sheet and related off-balance sheet contingent commitments for the following reasons: (i) assets are recorded in compliance with IFRS, but may relate to transactions where there is limited recourse to Airbus, Eurocopter or ATR;

(ii) the value of the assets is impaired or depreciated on the consolidated balance sheet; (iii) off-balance sheet gross exposure is calculated as the net present value of future payments, whereas the financial statements present the total future payments in nominal terms; and (iv) exposure related to certain AVGs recorded as operating leases in the financial statements is categorised under Asset Value Exposure, not Customer Financing Exposure.

Airbus' Gross Customer Financing Exposure amounted to US\$ 1.8 billion (€1.3 billion) as of 31 December 2009. The chart below illustrates the evolution of this exposure during 2009 (in US\$ million).

Evolution of Airbus Gross Exposure during 2009

Airbus Gross Customer Financing Exposure as of 31 December 2009 is distributed over 92 aircraft, operated at any time by approximately 25 airlines. In addition, the level of exposure may include other aircraft-related assets, such as spare parts. 90% of Airbus Gross Customer Financing Exposure is distributed over 9 airlines in 6 countries (this excludes backstop commitments).

ATR's Gross Customer Financing Exposure amounted to US\$ 0.2 billion (€0.2 billion) as of 31 December 2009. This exposure is distributed over 164 aircraft. EADS proportionally consolidates only 50% of ATR and shares the risk with its partner, Alenia.

Eurocopter's Gross Customer Financing Exposure amounted to €0.1 billion as of 31 December 2009. This exposure is distributed over approximately 50 helicopters.

Net Exposure. Net exposure is the difference between gross exposure and the estimated value of the collateral security. Collateral value is assessed using a dynamic model based on the net present value of expected future rentals from the aircraft in the leasing market and potential cost of default. This valuation model yields results that are typically lower than residual value estimates by independent sources in order to allow for what management believes is its conservative assessment of market conditions, as well as for repossession and transformation costs. See "— 2.1.3.8 Accounting for Sales Financing Transactions in the Financial Statements".

The table below shows the transition from gross to net financing exposure (which does not include AVGs) as at 31 December 2009, 2008 and 2007. It includes 100% of Airbus' and Eurocopter's customer financing exposure and 50% of ATR's exposure, reflecting EADS' stake in ATR.

Residual exposure		-	-	-	-	-	-	-	-	-	-

* The indicated numbers refer to the number of the Notes to the Consolidated Financial Statements (IFRS).

The gross value of consolidated operating leases shown in the table above (€341 million in 2009, €433 million in 2008 and €600 million in 2007) is accounted for in “Property, plant and equipment” at net book value of operating leases before impairment. Corresponding accumulated asset impairments (€-70 million in 2009, €-52 million in 2008 and €-102 million in 2007) are charged against this net book value. See “Notes to the Consolidated Financial Statements (IFRS) — Note 15: Property, plant and equipment” and “— Note 34: Commitments and contingencies”.

Also shown in the table above is the gross value for consolidated finance leases and loans (€1,602 million in 2009, €1,352 million in 2008 and €1,036 million in 2007). Consolidated finance leases (€845 million in 2009, €848 million in 2008 and €690 million in 2007) are accounted for as long-term financial assets, recorded at their book value before impairment. Loans (€757 million in 2009, €504 million in 2008 and €346 million in 2007) are also accounted for as long-term financial assets, recorded at their outstanding gross amount. Corresponding overall accumulated impairments (€-158 million in 2009, €-244 million in 2008 and €-191 million in 2007) are charged against the book values. See “Notes to the Consolidated Financial Statements (IFRS) —

Note 17: Investments in associates accounted for under the equity method, other investments and other long-term financial assets”.

Off-balance sheet customer financing exposure at Airbus, ATR (accounted for at 50% by EADS) and Eurocopter was €540 million in 2009, €530 million in 2008 and €568 million in 2007. These amounts reflect the total nominal value of future payments under lease in/lease out structures. The corresponding net present value of future payments (discounted and net of mitigating factors) is included in total Gross Financing Exposure for an amount of €429 million in 2009, €415 million in 2008 and €440 million in 2007. A provision of €260 million has been accrued for in EADS’ balance sheet as of 31 December 2009 to cover the full amount of the corresponding net exposure. See “Notes to the Consolidated Financial Statements (IFRS) — Note 34: Commitments and contingencies”.

Asset Value Exposure. A significant portion of EADS’ asset value exposure arises from outstanding AVGs, primarily at Airbus. Management considers the financial risks associated with such guarantees to be manageable. Three factors contribute to this assessment: (i) the guarantee only covers a tranche of the estimated future value of the aircraft, and its level is considered prudent in comparison to the estimated future value of each

1

2

3

4

5

Back to Contents

aircraft; (ii) the AVG-related exposure is diversified over a large number of aircraft and customers; and (iii) the exercise periods of outstanding AVGs are distributed through 2021, resulting in low levels of exposure maturing in any year. Because exercise dates for AVGs occur on average in the 12th year following aircraft delivery, AVGs issued in 2009 will generally not be exercisable prior to 2021, and, therefore, an increase in near-term exposure is not expected. In addition, these AVGs must generally be exercised during a pre-defined window and contain specific conditions that must be met in order for them to be exercisable.

Gross Exposure. Gross Asset Value Exposure is defined as the sum of the maximum guaranteed tranche amounts (as opposed to the sum of the maximum guaranteed asset value amounts) under outstanding AVGs. At 31 December 2009, Gross Asset Value Exposure was US\$ 2.5 billion (€ 1.8 billion). The off-balance sheet portion of Gross Asset Value Exposure, representing AVGs with net present values of less than 10% of the sales price of the corresponding aircraft, was € 1,015 million, excluding € 430 million where the risk is considered to be remote. In many cases, the risk is limited to a specific portion of the residual value of the aircraft. The remaining Gross Asset Value Exposure is recorded on-balance sheet.

Net Exposure. The present value of the risk inherent to the given asset value guarantees, where a settlement is considered to be probable, is fully provided for and included in the total amount of provisions for asset value risks of € 657 million. This provision covers a potential expected shortfall between the estimated value of the aircraft of the date upon which the guarantee can be exercised and the value guaranteed on a transaction basis taking counter guarantees into account. See “Notes to the Consolidated Financial Statements (IFRS) — Note 26C: Other provisions”.

Backstop Commitments. While backstop commitments to provide financing related to orders on Airbus’ and ATR’s backlog are also given, such commitments are not considered to be part of gross exposure until the financing is in place,

which occurs when the aircraft is delivered. This is due to the fact that (i) past experience suggests it is unlikely that all such proposed financings actually will be implemented (although it is possible that customers not benefiting from such commitments may nevertheless request financing assistance ahead of aircraft delivery), (ii) until the aircraft is delivered, Airbus or ATR retain the asset and do not incur an unusual risk in relation thereto (other than the corresponding work-in-progress), and (iii) third parties may participate in the financing.

Orders and Backstop Commitments. Over the last three years (2007, 2008 and 2009), the average number of newly ordered aircraft in respect of which a backstop commitment has been offered amounted to 5% of the average orders recorded over the same period, *i.e.* 42 supported aircraft per year out of 796 orders per year on average. These financing commitments may or may not materialise at the contractual delivery date of the aircraft. In addition, the level of financing support together with the terms and conditions offered to customers will vary.

Deliveries and Financing Support Implemented at Delivery. Over the last three years (2007, 2008 and 2009), the average number of aircraft delivered in respect of which financing support has been provided by Airbus amounted to 3% of the average number of deliveries over the same period, *i.e.* 12 aircraft financed per year out of 478 deliveries per year on average. This financing support may take the form of senior or junior loans or guarantees. Such support may have originated from EADS’ contractual backstop commitments provided at signing of the purchase agreement (see above) or may be the result of a request for financing assistance made by the customer ahead of aircraft delivery.

See “Notes to the Consolidated Financial Statements (IFRS) — Note 34: Commitments and contingencies” for further discussion of EADS’ sales financing policies and accounting procedures.

2.1.8 Hedging Activities

2.1.8.1 FOREIGN EXCHANGE RATES

More than 60% of EADS’ revenues are denominated in US dollars, with approximately half of such currency exposure “naturally hedged” by US dollar-denominated costs. The remainder of costs is incurred primarily in euros, and to a lesser extent, in pounds sterling. Consequently, to the extent that EADS does not use financial instruments to hedge its net current and future exchange rate exposure from the time of a customer order to the time of delivery, its profits will

be affected by market changes in the exchange rate of the US dollar against these currencies, and to a lesser extent, by market changes in the exchange rate of pound sterling against the euro. As EADS intends to generate profits only from its operations and not through speculation on foreign currency exchange rate movements, EADS uses hedging strategies solely to mitigate the impact of exchange rate fluctuations on its EBIT*. See “— 2.1.4.3 EBIT* Performance by Division — Foreign Currency Impact on EBIT*”. See also “Risk Factors — 1. Financial Market Risks — Exposure to Foreign Currencies”.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

As EADS uses financial instruments to hedge its net foreign currency exposure, the portion of its US dollar-denominated revenues not hedged by financial instruments (approximately 30% of total consolidated revenues) is exposed to changes in exchange rates. Of this non-hedged portion of revenues, a certain percentage (relating to customer pre-delivery payments) is converted into euro at the spot rate effective at the time the payment was received by EADS. The remainder of non-hedged US dollar-denominated revenues (corresponding to payments upon delivery) are subject to changes in the spot rate at the time of delivery. See “— 2.1.3.7 Foreign Currency Translation”.

Exposure on aircraft sales. For products such as aircraft, EADS typically hedges forecasted sales in US dollars. The hedged items are defined as the first forecasted highly probable future cash inflows for a given month based upon final payments at delivery. The amount of the expected flows to be hedged can cover up to 100% of the equivalent of the net US dollar exposure at inception. For EADS, a forecasted transaction is regarded as highly probable if the future delivery is included in the firm order book or is very likely to materialise in view of contractual evidence (e.g., a letter of intent). The coverage ratio is adjusted to take into account macroeconomic movements affecting the spot and interest rates as well as the robustness of the commercial cycle.

Exposure on non-aircraft business. For the non-aircraft business, EADS typically hedges inflows and outflows of foreign currencies from sales and purchase contracts following the same logic, typically in lower volumes.

Exposure on treasury operations. In connection with its treasury operations, EADS enters into foreign exchange swaps (notional amount of €4.2 billion at 31 December 2009) to adjust for short-term fluctuations of non-euro cash balances at the business unit level. Year-to-year changes in the fair market value of these swaps are recorded in the consolidated income statement

in the line item “other financial result”. These changes may have a material impact on EADS’ net income.

Embedded derivatives. EADS also has foreign currency derivative instruments which are embedded in certain purchase and lease contracts denominated in a currency other than the functional currency of the significant parties to the contract, principally US dollar and pound sterling. Gains or losses relating to such embedded foreign currency derivatives are reported in the line item “other financial result”. These changes may have a material impact on EADS’ net income. In addition, EADS hedges currency risk arising from financial transactions in other currencies than euro, such as funding transactions or securities.

Hedge Portfolio. EADS manages a long-term hedge portfolio with a maturity of several years covering its net exposure to US dollar sales, mainly relating to the activities of Airbus (and to a lesser extent, of ATR, Eurocopter, Astrium and the DS division). The net exposure is defined as the total currency exposure (US dollar-denominated revenues), net of the part that is “naturally hedged” by US dollar-denominated costs. The hedge portfolio covers the vast majority of the Group’s hedging transactions.

For financial reporting purposes, EADS mostly designates a portion of the total firm future cash flows as the hedged position to cover its expected net foreign currency exposure. Therefore, as long as the actual gross foreign currency cash inflows (per month) exceed the portion designated as being hedged, a postponement or cancellation of sales transactions and corresponding cash inflows have no impact on the hedging relationship. As hedging instruments, EADS primarily uses foreign currency forwards and synthetic forwards, as well as options.

The table below sets forth the notional amount of foreign exchange hedges in place as of 31 December 2009, and the average US dollar rates applicable to corresponding EBIT*.

	2010	2011	2012	2013	2014	2015+	Total
Total Hedges (in US\$ bn)	16.8⁽¹⁾	15.6⁽¹⁾	12.4	8.5	4.5	3.0	60.8
Forward Rates (in US\$) ⁽²⁾							
€-US\$	1.35	1.39	1.40	1.41	1.42	1.42	
£-US\$	1.73	1.85	1.69	1.60	1.64	1.71	

(1) Including US\$ 0.9 billion and US\$ 1.0 billion of options in 2010 and 2011, respectively.
 (2) Excluding options.

For further information regarding the notional amounts of the Group’s foreign exchange derivative financial instruments, see “Notes to the Consolidated Financial Statements (IFRS) — Note 35C: Notional amounts of derivative financial instruments”.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

2.1.8.2 INTEREST RATES

EADS uses an asset and liability management approach with the objective of limiting its interest rate risk. EADS attempts to match the risk profile of its assets with a corresponding liability structure. The remaining net interest rate exposure is managed through several types of instruments in order to minimise risks and financial impacts. Therefore, EADS may use interest rate derivatives for hedging purposes.

Hedging instruments that are specifically related to debt instruments (such as the notes issued under the EMTN programme) have at most the same nominal amounts, as well as the same maturity dates, as the corresponding hedged item.

Regarding the management of its cash balance, EADS invests mainly in short-term instruments and/or floating rate instruments in order to further minimise any interest risk in its cash and securities portfolio.

For information regarding the notional amounts of the Group's interest rate derivative financial instruments, see "Notes to the Consolidated Financial Statements (IFRS) — Note 35C: Notional amounts of derivative financial instruments".

For further information relating to market risk and the ways in which EADS attempts to manage this risk, see "Notes to the Consolidated Financial Statements (IFRS) — Note 35A: Financial risk management".

2.2 Financial Statements

The Consolidated Financial Statements (IFRS) and the Company Financial Statements of EADS for the year ended 31 December 2009, together with the related notes, appendices and Auditors' reports, are attached hereto and shall be deemed to be incorporated in and form part of this Registration Document.

In addition, the English versions of the following documents shall be deemed to be incorporated in and form part of this Registration Document:

- the Consolidated Financial Statements (IFRS) and the Company Financial Statements of EADS for the year ended 31 December 2007, together with the related notes, appendices and Auditors' reports, as included in "Part 1/1.2 Financial Statements" of the Registration Document filed in English with, and approved by, the AFM on 24 April 2008 and filed in English with the Chamber of Commerce of Amsterdam; and
- the Consolidated Financial Statements (IFRS) and the Company Financial Statements of EADS for the year ended 31 December 2008, together with the related notes,

appendices and Auditors' reports, as attached to and incorporated by reference in the Registration Document filed in English with, and approved by, the AFM on 22 April 2009 and filed in English with the Chamber of Commerce of The Hague.

Copies of the above-mentioned documents are available free of charge upon request in English, French, German and Spanish at the registered office of the Company and on www.eads.com.

Copies of the above-mentioned Registration Documents are also available in English on the website of the AFM on www.afm.nl. The above-mentioned financial statements are also available in English for inspection at the Chamber of Commerce of The Hague.

EADS confirms that the reports of the Auditors attached hereto (as well as those incorporated by reference herein) have been accurately reproduced and that as far as EADS is aware and is able to ascertain from the information provided by the Auditors, no facts have been omitted which would render such reports inaccurate or misleading.

3.1 General Description of the Company

3.1.1 Commercial and Corporate Names, Seat and Registered Office

Commercial Name: EADS

Seat (*statutaire zetel*): Amsterdam

Corporate Name: European Aeronautic Defence and Space Company EADS N.V.

Tel: + 31 (0)71 5245 600

Registered Office: Mendelweg 30, 2333 CS Leiden, the Netherlands

Fax: +31 (0)71 5232 807

3.1.2 Legal Form

The Company is a public limited liability company (*naamloze vennootschap*) organised under the laws of the Netherlands.

As a company operating worldwide, EADS is subject to, and operates under, the laws of each country in which it conducts business.

3.1.3 Governing Laws and Disclosures

The Company is governed by the laws of the Netherlands (in particular Book 2 of the Dutch Civil Code) and by its Articles of Association (the “**Articles of Association**”).

Pursuant to the Transparency Directive, EADS must disseminate such Regulated Information throughout the European Community in a manner ensuring fast access to such information on a non-discriminatory basis. For this purpose, EADS may use a professional service provider (wire). In addition, Regulated Information must be filed at the same time with the relevant competent market authority. EADS must then ensure that Regulated Information remains publicly available for at least five years.

The Company is subject to various legal provisions of the Dutch Financial Supervision Act (*Wet op het financieel toezicht*) (the “**WFT**”). In addition, given the fact that its shares are admitted for trading on a regulated market in France, Germany and Spain, the Company is subject to certain laws and regulations in these three jurisdictions. A summary of the main regulations applicable to the Company in relation to information to be made public in these three jurisdictions, as well as the Netherlands, is set out below.

Finally, Regulated Information must be made available for central storage by a mechanism that is to be officially designated by the issuer’s home member state.

3.1.3.1 PERIODIC DISCLOSURE OBLIGATIONS

Pursuant to Directive 2004/109/EC on the harmonisation of transparency requirements in relation to information about issuers whose securities are admitted to trading on a regulated market (the “**Transparency Directive**”), EADS is required to disclose certain periodic and ongoing information (the “**Regulated Information**”).

Dutch Regulations

For the purpose of the Transparency Directive, supervision of EADS is effected by the member state in which it maintains its registered office, which is the Netherlands. The competent market authority that assumes final responsibility for supervising compliance by EADS in this respect is the AFM.

1

2

3

4

5

Back to Contents

Under the Transparency Directive as implemented under Dutch law, EADS is subject to a number of periodic disclosure requirements, such as:

- publishing an annual financial report, together with an audit report drawn up by the statutory Auditors, within four months after the end of each financial year;
- publishing a semi-annual financial report, within two months after the end of the first six months of the financial year; and
- publishing quarterly financial reports, within a period between ten weeks after the beginning and six weeks before the end of the first or second six-month period of the financial year.

In addition, the Company must file with the AFM, within five days following their adoption by the Company's shareholders, its audited consolidated annual financial accounts, the management report, the Auditors' report and other information related to the financial accounts.

The Company has also provided in this Registration Document a list of certain corporate and financial documents and other information that it has published or made available to the public over the last 12 months and details of where these documents can be obtained (see “— 3.5 Annual Securities Disclosure Report”).

French Regulations

Since the Transparency Directive was implemented in France on 20 January 2007, EADS is no longer required to comply with certain disclosure obligations pursuant to the general regulations of the AMF.

In accordance with the requirement set forth in the Transparency Directive to disseminate Regulated Information throughout the European Community, EADS is required to provide simultaneously in France the same information as that provided abroad.

German Regulations

Since the Transparency Directive was implemented in Germany on 20 January 2007, EADS is no longer required to comply with certain disclosure obligations pursuant to the German Stock Exchange Act (*Börsengesetz*) and the German Stock Exchange Admissions Regulation (*Börsenzulassungs-Verordnung*).

Due to the listing of the Company's shares in the *regulierter Markt* (specifically, in the sub-segment of the *regulierter Markt, the Prime Standard*) of the Frankfurt Stock Exchange, the Company is subject to the post-listing obligations described below. In addition, the Company is included in the selection index MDAX, the MidCap index of *Deutsche Börse AG*.

According to sections 65 and 66 of the Exchange Rules (*Börsenordnung*) of the Frankfurt Stock Exchange, the listing in the *Prime Standard* of the *regulierter Markt* results in the obligation of the Company to publish consolidated annual accounts as well as quarterly reports.

In addition, the Company is required as a result of its listing in the *regulierter Markt (Prime Standard)* to prepare an update of a corporate action timetable at the beginning of each fiscal year. The Company is also required to hold a meeting of analysts at least once a year in addition to the press conference regarding the balance sheet.

Save for certain exceptions, the Company has to apply for admission of shares issued at a later date to the *regulierter Markt* of the Frankfurt Stock Exchange, see section 69 of the German Stock Exchange Admissions Regulation.

Spanish Regulations

Since the entering into force of the law and regulation implementing the Transparency Directive in Spain in April and December 2007, respectively, EADS is no longer required to comply with certain disclosure obligations pursuant to the Spanish Securities Act as developed by Royal Decree 1362/2007 of 19 October 2007.

In accordance with the requirement set forth in the Transparency Directive to disseminate Regulated Information throughout the European Community, EADS is required to provide simultaneously in Spain the same information as that provided abroad.

3.1.3.2 ONGOING DISCLOSURE OBLIGATIONS

Pursuant to the Transparency Directive, Regulated Information includes in particular inside information as defined pursuant to Article 6 of Directive 2003/6/EC on insider dealing and market manipulation (the “**Market Abuse Directive**”). Such information must be disseminated throughout the European Community (see introduction to section “— 3.1.3.1 Periodic Disclosure Obligations”).

Inside information shall mean information of a precise nature which has not been made public, relating, directly or indirectly, to one or more issuers of financial instruments or to one or more financial instruments and which, if it were made public, would be likely to have a significant effect on the prices of those financial instruments or on the price of related derivative financial instruments.

Inside information must be disclosed to the markets as soon as possible. However, an issuer may under its own responsibility delay the public disclosure of inside information so as not to prejudice its legitimate interests provided that such omission would not be likely to mislead the public and provided that the issuer is able to ensure the confidentiality of that information.

Dutch Regulations

Following the implementation of the Transparency Directive into Dutch law, EADS must publicly disclose Regulated Information and also file Regulated Information with the AFM, which will keep all relevant Regulated Information in a publicly available register. EADS will, whenever it discloses inside information pursuant to applicable mandatory law as part of the Regulated Information, disclose and disseminate throughout the European Community any such information.

Under Dutch law, the Company must also publish any change in the rights attached to its shares, as well as any changes in the rights attached to any rights issued by the Company to acquire the Company's shares.

French Regulations

Any inside information as defined above will be disclosed in France by means of dissemination throughout the European Community, as it will be organised under Dutch law implementing the Transparency Directive so as to provide simultaneously in France equivalent information to that provided abroad.

German Regulations

Any inside information as defined above will be disclosed in Germany by means of dissemination throughout the European Community, as it will be organised under Dutch law implementing the Transparency Directive so as to provide simultaneously in Germany equivalent information to that provided abroad.

Spanish Regulations

Pursuant to Article 82 of the Spanish Securities Act, the Company is required to make public, as soon as possible, any fact or decision that may substantially affect the quotation of its shares ("a **relevant event**"). Any relevant event must be notified to the CNMV simultaneously with its diffusion by any other means, as soon as the relevant fact is known, the relevant decision has been made or, the relevant agreement has been executed, as the case may be. EADS may, under its own responsibility, delay the publication of any relevant event if it considers that such publication damages its legitimate interests, provided that such lack of publication does not mislead the public and that EADS is in a position to guarantee the confidentiality of the relevant information. Nonetheless, EADS will immediately inform the CNMV should it decide to delay the publication of any relevant event. Furthermore, pursuant to the Spanish Securities Act, EADS must post details of any

relevant event on its website. EADS must try to ensure that the relevant information is disclosed simultaneously to all types of investors in the member States of the European Union where it is listed.

An order dated 1 June 2009 requires that EADS appoint at least one official spokesperson to respond to any inquiries that the CNMV may have in relation to a relevant event disclosed by EADS. This spokesperson must be able to officially reply on behalf of EADS and must have access to senior management in order to verify any information requested by the CNMV.

A circular dated 4 November 2009 further specifies the process for communicating the appointment of the CNMV spokesperson and any subsequent replacement. It also provides that the publication of any relevant event must be made via the CIFRADO system (the CNMV's electronic system for notifications and communications) and that publication by a different means is only possible under exceptional circumstances, subject to approval by the General Markets Directorate (*Dirección General de Mercados*).

Pursuant to the Spanish Securities Act and its developing rules and regulations, EADS is also required:

- (i) to have rules of the Board of Directors which must be filed with the CNMV and published on EADS' website;
- (ii) to file with the CNMV a description of the relevant Dutch law provisions and provisions in the Articles of Association governing the conduct of shareholders' meetings and post such description on its website;
- (iii) to have a website which must contain as a minimum the information specified by Spanish regulations;
- (iv) to file a corporate governance report with the CNMV on an annual basis; and
- (v) in respect of the provisions of any shareholders' agreement which relate to the exercise of voting rights at shareholders' meetings or restrictions or conditions on the free transferability of shares or convertible bonds, to (a) provided EADS is a party to the shareholders' agreement, file such provisions with the CNMV who will then publish the provisions as a relevant event, (b) post the provisions on EADS' website, unless the CNMV exempts EADS from doing so, and (c) set out details of the provisions in the annual corporate governance report referred to in (iv) above.

3.1.4 Date of Incorporation and Duration of the Company

The Company was incorporated on 29 December 1998 for an unlimited duration.

3.1.5 Objects of the Company

Pursuant to Article 2 of the Articles of Association, the objects of the Company are to hold, co-ordinate and manage participations or other interests and to finance and assume liabilities, provide for security and/or guarantee debts of legal entities, partnerships, business associations and undertakings that are involved in:

- the aeronautic, defence, space and/or communication industry; or
- activities that are complementary, supportive or ancillary thereto.

3.1.6 Commercial and Companies Registry

The Company is registered with the Registry of the Chamber of Commerce of The Hague (*Handelsregister van de Kamer van Koophandel en Fabrieken voor Den Haag*) under number 24288945.

3.1.7 Inspection of Corporate Documents

The Articles of Association are available for inspection in Dutch at the Chamber of Commerce of The Hague.

In France, the Articles of Association are available at the head office of EADS in France (37, boulevard de Montmorency, 75016 Paris, France, Tel.: + 33 1 42 24 24 24).

In Germany, the Articles of Association are available at the head office of EADS in Germany (Willy-Messerschmitt-Str. – Tor 1, 81663 Munich, Germany, Tel.: + 49 89 60 70).

In Spain, the Articles of Association are available at the CNMV and at the head office of EADS in Spain (Avda. Aragón 404, 28022 Madrid, Spain, Tel.: + 34 91 585 70 00).

3.1.8 Financial Year

The financial year of the Company starts on 1 January and ends on 31 December of each year.

3.1.9 Allocation and Distribution of Income

3.1.9.1 DIVIDENDS

The Board of Directors shall determine which part of the profits of the Company shall be attributed to reserves. The remaining distributable profit shall be at the disposal of the shareholders' meeting.

The shareholders' meeting may resolve (if so proposed by the Board of Directors) that all or part of a dividend shall be paid in shares of the Company as opposed to cash.

The declaration of a dividend, an interim dividend or another distribution to the shareholders shall be made known to them within seven days after such declaration. Declared dividends shall be payable within four weeks of such declaration unless

another date for payment is proposed by the Board of Directors and approved by the shareholders' meeting.

Dividends, interim dividends and other distributions on shares shall be paid by bank transfer to the bank or giro accounts designated in writing to the Company by, or on behalf of, shareholders at the latest 14 days after their announcement.

3.1.9.2 LIQUIDATION

In the event of the dissolution and liquidation of the Company, the assets remaining after payment of all debts and liquidation expenses shall be distributed amongst the holders of the shares in proportion to their shareholdings.

3.1.10 General Meetings

3.1.10.1 CALLING OF MEETINGS

Shareholders' meetings are held as often as the Board of Directors deems necessary or upon the request of shareholders holding, individually or together, at least 10% of the total issued share capital of the Company.

The Board of Directors must give notice of general meetings in at least one of the Netherlands' national daily newspapers, at least one international daily newspaper and at least one daily newspaper in each of the countries in which the Company's shares are listed. Such publication must be made at least 15 days before the day of the meeting, not counting the day on which notice was given, and shall state either the matters to be considered at such meeting or that the agenda is open to inspection by the shareholders at the offices of the Company and at such other locations as may be specified in the notice.

The annual shareholders' meeting of the Company is held within six months of the end of the financial year.

Shareholders' meetings are held in Amsterdam, The Hague, Rotterdam or *Haarlemmermeer* (Schiphol Airport). The Board of Directors may decide that shareholders' meetings may be attended by means of electronic or video communication devices from the locations mentioned in the convening notice.

The Board of Directors must announce the date of the annual shareholders' meeting at least two months before the meeting. Requests made by one or more shareholders collectively

representing at least 1% of the issued share capital (or shares having an aggregate market value of €50 million), to put items on the agenda for the annual shareholders' meeting, must be effected by the Board of Directors, if such requests to the Board of Directors have been made at least six (6) weeks prior to the date scheduled for the meeting except if, in the opinion of the Board of Directors, important interests of the Company prevail over the insertion of such items into the agenda.

A request as referred to in the preceding paragraph may only be made in writing. The Board of Directors can decide that in "writing" is understood to include a request that is recorded electronically.

3.1.10.2 RIGHT TO ATTEND MEETINGS

Each holder of one or more shares may attend shareholders' meetings, either in person or by written proxy, to speak and to vote according to the Articles of Association. See "— 3.1.10.4 Conditions of Exercise of Right to Vote".

A shareholder or person who has the right to attend a meeting can see to it that he is represented by more than one proxy holder, provided that only one proxy holder can be appointed for each share.

In relation to holders of registered shares, the Board of Directors may provide in the convening notice that those persons are recognised as authorised to exercise the rights to attend, speak and vote at the shareholders' meetings, who at the point in

1

2

3

4

5

[Back to Contents](#)

time mentioned in the convening notice are authorised to exercise those rights and as such have been registered in the register appointed for the purpose by the Board of Directors, irrespective of who is authorised to exercise those rights on the day of the meeting.

Any person who is entitled to exercise the rights set out in the above paragraph (either in person or by means of a written proxy) and is attending the meeting from another location (see “— 3.1.10.1 Calling of Meetings”) in such a manner that the person acting as Chairman of the meeting is convinced that such a person is properly participating in the meeting, shall be deemed to be present or represented at the meeting, shall be entitled to vote and shall be counted towards a quorum accordingly.

As a prerequisite to attending the shareholders’ meeting and to casting votes, the holders of bearer shares and those who derived the aforementioned rights from these shares shall be obliged to deposit their share certificate or the documents evidencing their rights against receipt, at such locations as shall be determined by the Board of Directors and stated in the convening notice.

Such convening notice shall also state the day that has been fixed as the final day on which the share certificates and the documents evidencing the aforementioned rights may be deposited. That day may not be earlier than five business days, but in each case not earlier than the seventh day, prior to the meeting.

As far as registered shares are concerned, the Board of Directors should be informed in writing within the timeframe mentioned in the two preceding sentences of the intention to attend the meeting (the Board must receive such written information ultimately on the date specified in the notice by which the meeting is convened).

Holders of shares that are registered in the shareholders’ register kept in Amsterdam have the option of holding them through Euroclear France S.A. In this case the shares are registered in the name of Euroclear France S.A.

Shareholders holding their EADS shares through Euroclear France S.A. who wish to attend general meetings will have to request from their financial intermediary or accountholder an admission card and be given a proxy to this effect from Euroclear France S.A. in accordance with the instructions specified by the Company in the convening notice. For this purpose, a shareholder will also be able to request that it be registered directly (and not through Euroclear France S.A.) in the register of the Company. However, only shares registered in the name of Euroclear France S.A. may be traded on stock exchanges.

In order to exercise their voting rights, the shareholders will also be able, by contacting their financial intermediary or accountholder, to give their voting instructions to Euroclear France S.A. or to any other person designated for this purpose, as specified by the Company in the convening notice.

Pursuant to the Articles of Association, EADS may set a “registration date” at which the persons entitled to attend and vote at the shareholders’ meetings are recorded for this purpose irrespective of who is shareholder at the time of the meeting. It may also provide for electronic means of convocation, attendance and voting at the shareholders’ meetings. The introduction of such electronic means will depend on the availability of the necessary technical means and the market practice.

3.1.10.3 MAJORITY AND QUORUM

All resolutions are adopted by means of a simple majority of the votes cast except when a qualified majority is prescribed by the Articles of Association or by Dutch law. No quorum is required for any shareholders’ meeting to be held. Dutch law requires a special majority for the passing of certain resolutions: inter alia, capital reduction, exclusion of pre-emption rights in connection with share issues, statutory mergers or statutory de-mergers; the passing of such resolutions requires a majority of two-thirds of the votes cast if 50% of the share capital with voting rights is not present at the meeting (or otherwise a simple majority). In addition, resolutions to amend the Articles of Association or to dissolve the Company may only be adopted with a majority of at least two-thirds of the valid votes cast at a shareholders’ meeting, whatever the quorum present at such meeting.

Pledges of shares and beneficiaries of a usufruct, which do not have voting rights, do not have the right to attend and to speak at shareholders’ meetings. The owners of shares which are subject to a pledge or a usufruct, which do not have voting rights, are entitled to attend and to speak at shareholders’ meetings.

3.1.10.4 CONDITIONS OF EXERCISE OF RIGHT TO VOTE

In all shareholders’ meetings, each shareholder has one vote in respect of each share it holds. The major shareholders of EADS – as set forth in “— 3.3.2 Relationships with Principal Shareholders” – do not enjoy different voting rights from those of the other shareholders.

A shareholder whose shares are subject to a pledge or usufruct shall have the voting rights attaching to such shares unless otherwise provided by law or by the Articles of Association or if, in the case of a usufruct, the shareholder has granted voting rights to the usufructuary. Pursuant to the Articles of Association and subject to the prior consent of the Board of Directors, a pledgee of shares in the Company may be granted the right to vote in respect of such pledged shares.

Article 25 (paragraph 2 and 3) of the Articles of Association provides that “*The right to vote can be granted to an usufructuary. The right to vote can be granted to a pledgee, but only with the prior consent of the Board of Directors. No vote may be cast at the general meeting of shareholders on a share that is held by the Company or a*

subsidiary; nor for a share in respect of which one of them holds the depositary receipts. Usufructuaries and pledgees of shares that are held by the Company or its subsidiaries are, however, not excluded from their voting rights, in case the right of usufruct or pledge was vested before the share was held by the Company or its subsidiary.”

3.1.11 Disclosure of Holdings

Pursuant to the WFT, any person who, directly or indirectly, acquires or disposes of an interest in the capital or voting rights of EADS must immediately give written notice to the AFM by means of a standard form, if, as a result of such acquisition or disposal, the percentage of capital interest or voting rights held by such person meets, exceeds or falls below the following thresholds: 5%, 10%, 15%, 20%, 25%, 30%, 40%, 50%, 60%, 75% and 95%. Any person whose interest in the capital or voting rights of EADS meets, exceeds or falls below one or several of the above-mentioned thresholds due to a change in EADS’ outstanding capital, or in voting rights attached to the shares as notified to the AFM by EADS, should notify the AFM no later than the fourth trading day after the AFM has published the notification by EADS. Among other things, EADS is required to notify the AFM immediately if its outstanding share capital or voting rights have changed by 1% or more since the Company’s previous notification.

If at the end of a calendar year the composition of an investor’s holding differs from its previous disclosure as a result of the conversion of certain types of securities or following the exercise of rights to acquire voting rights, this investor must then provide an update of its previous disclosure within four weeks of the end of each calendar year by giving written notice thereof to the AFM. The disclosures are published by the AFM on its website (www.afm.nl). Pursuant to the Articles of Association, shareholders must also notify the Company when crossing the thresholds above.

The Articles of Association also require that any person acquiring directly or indirectly or with others with whom it is acting in concert more than one tenth of the issued share capital or voting rights of the Company must notify the Company of its intentions (i) to buy or sell shares of the Company in the following 12 months; (ii) to continue or to stop acquiring shares or voting rights of the Company; (iii) to acquire control of the Company; or (iv) to seek to designate a member of the Board of Directors of the Company. The Company will provide the AMF with the information received in this context.

Failure to comply with the legal obligation to notify a change in shareholding under the WFT is a criminal offence punishable by criminal and administrative penalties as well as civil law penalties, including the suspension of voting rights.

DISCLOSURE REQUIREMENTS FOR MEMBERS OF THE BOARD OF DIRECTORS AND THE EXECUTIVE COMMITTEE

Disclosure of holdings

In addition to the requirements under the WFT regarding the disclosure of holdings in case the specified thresholds are met or exceeded or if holdings fall below these thresholds, members of the Board of Directors must report to the AFM the number of shares in EADS and attached voting rights⁽¹⁾ held by him or an entity controlled by him, within two weeks following their appointment as director, whether or not such shareholdings meet or exceed any of the specified thresholds. Subsequently, any member of the Board of Directors is required to notify the AFM of any changes in such number of shares in EADS and attached voting rights.

Disclosure of transactions carried out on any securities issued by the Company

Based on Section 5:60 of the WFT, certain persons discharging managerial responsibilities within the Company and, where applicable, persons closely associated with them (together “**Insiders**”, as defined below), notify the AFM of all transactions conducted for their own account involving shares of the Company, or derivatives or other financial instruments related to such shares. These persons notify the AFM of the transactions within five trading days unless the aggregate amount of such transactions does not exceed €5,000 in respect of all transactions in a calendar year.

“**Insiders**” for EADS include (i) members of the Board of Directors and the Executive Committee of the Company, (ii) persons closely associated with any person mentioned under category (i) (including their spouses, dependent children and

(1) In this context, the term “shares” also includes for example depositary receipts for shares and rights resulting from an agreement to acquire shares or depositary receipts for shares, specifically call options, warrants, and convertible bonds. Equally, the term “voting rights” also includes actual or contingent rights to voting rights (e.g., embedded in call options, warrants or convertible bonds).

1

2

3

4

5

Back to Contents

other relatives who have shared the same household), and (iii) legal entities, trusts or partnerships whose managerial responsibilities are discharged by any person referred to in categories (i) or (ii) or which are directly or indirectly controlled by such a person, or that have been set up for the benefit of such a person, or whose economic interests are substantially equivalent to those of such a person.

EADS has adopted specific internal insider trading rules (the “**Insider Trading Rules**”) in order to ensure compliance with the above requirements and with other share trading regulations applicable in the Netherlands, France, Germany and Spain. Pursuant to the Insider Trading Rules, (i) all employees and directors are prohibited from conducting transactions in EADS shares or stock options if they have inside information, and (ii) certain persons are only allowed to trade in EADS shares or stock options within very limited periods and have specific information obligations to the ITR Compliance Officer of the Company and the competent financial market authorities with respect to certain transactions. The updated version of the Insider Trading Rules effective from 1 January 2007 is available on the Company’s website.

Hans Peter Ring, Chief Financial Officer of EADS, has been appointed as the ITR Compliance Officer by the Board of Directors of EADS. The ITR Compliance Officer is responsible

for the implementation of the Insider Trading Rules and for reporting to the AFM.

Pursuant to section 5:59 paragraph of the WFT, the Company must maintain a list of all persons working for it by virtue of a labour relationship or otherwise, who may have access to inside information. Equivalent requirements exist under French, German and Spanish law.

According to paragraph 15a of the German Securities Trading Act, persons with significant managerial responsibility within the Company (*i.e.*, for EADS, the members of the Board of Directors and of the Executive Committee), or the persons closely associated with them, must disclose transactions conducted for their own account involving shares of the Company or financial instruments that relate to those shares, especially derivatives. These persons have to notify the Company and the German Federal Financial Supervisory Authority of the transactions within five trading days unless the aggregate amount of such transactions does not exceed €5,000 in respect of all transactions in a calendar year. Upon implementation of the Transparency Directive into German law on 20 January 2007, EADS is no longer required to publish such notifications on its website or in a German supra-regional mandatory stock exchange newspaper.

3.1.12 Mandatory Offers

3.1.12.1 TAKEOVER DIRECTIVE

The Directive 2004/25/EC on takeover bids (the “**Takeover Directive**”) sets forth the principles governing the allocation of laws applicable to EADS in the context of a takeover bid for the shares of the Company. The Takeover Directive refers to the rules of the Netherlands and the rules of the European Union Member State of the competent authority that must be chosen by EADS from among the various market authorities supervising the markets where its shares are listed.

For EADS, matters relating to, *inter alia*, the consideration offered in the case of a bid, in particular the price, and matters relating to the bid procedure, in particular the information on the offeror’s decision to make a bid, the contents of the offer document and the disclosure of the bid, shall be determined by the laws of the European Union Member State having the competent authority, which will be selected by EADS at a future date.

Matters relating to the information to be provided to the employees of EADS and matters relating to company law, in particular the percentage of voting rights which confers control and any derogation from the obligation to launch a bid, the conditions under which the Board of Directors of EADS may

undertake any action which might result in the frustration of the bid, the applicable rules and the competent authority will be governed by Dutch law (see “— 3.1.12.2 Dutch Law” and “— 3.1.12.3 Articles of Association”). Dutch law also contains provisions on the consideration offered, in particular the price and determination of a fair price by the Enterprise Chamber of the Amsterdam Court of Appeals at the request of the bidder, the target company or any holder of shares.

3.1.12.2 DUTCH LAW

The bill implementing the Takeover Directive (the “**Takeover Act**”) in Dutch Law entered into force on 28 October 2007. In accordance with the Takeover Act, shareholders are required to make an unconditional public offer for all issued and outstanding shares in the Company’s share capital if they – individually or acting in concert (as such term is defined below), directly or indirectly – have 30% or more of the voting rights (significant control) in the Company. In addition to the other available exemptions listed below, the requirement to make a public offer does not apply to persons, who at the time the Takeover Act came into force, already held – individually or acting in concert – 30% or more of the voting rights in the Company.

Under the Takeover Act, natural persons, legal entities or companies are “acting in concert” if they cooperate on the basis of an agreement with the objective to acquire significant control (as defined above) in the target company, or if they cooperate with the target company with the objective to prevent the success of an announced public offer for the shares in such target company. The following categories of natural persons, legal entities or companies are deemed to be “acting in concert” under the Takeover Act: (i) legal entities or companies that form a group of companies as defined in section 2:24b of the Dutch Civil Code, (ii) legal entities or companies and their subsidiaries, and (iii) natural persons and their subsidiary companies.

In addition to the exemption stated above, the obligation to make a public offer does not apply to the natural person, legal entity or company that, amongst others:

- acquires significant control as a result of declaring unconditional (*gestand doen*) a public offer made for all shares (or depositary receipts) in the target company;
- is a legal entity, independent from the target company, that acquires significant control after a public offer has been announced by a third party, provided that such entity (i) holds the shares in the target company for a maximum period of two years and for purposes of protection of the target company and (ii) the corporate objects of such entity are to preserve the interests of the target company;
- is a legal entity, independent from the target company, which has issued depositary receipts for the shares in the target company;
- acquires significant control as a result of: (i) an intra-group transfer of the shares representing significant control; or (ii) a transfer between a parent company and its subsidiary;
- acquires significant control acting in concert with one or more other natural persons, legal entities or companies, in which case the obligation to make a public offer lies with the natural person, legal entity or company that can exercise most of the voting rights in the general meeting of shareholders of the target company; and
- acts as a custodian (if and to the extent it cannot exercise any voting rights in its sole discretion).

The obligation to make a public offer also does not apply if:

- the natural person, legal entity or company, after acquiring significant control, loses such control within a thirty day grace period, unless (i) loss of control is due to a transfer to a natural person, legal entity or company to which one of the exemptions set out above applies, or (ii) the acquirer of the significant control has exercised its voting rights during this thirty day period; or

- the target company’s general meeting of shareholders agrees upfront with the acquisition of significant control - and any subsequent acquisition of shares - by a third party with 95% of votes cast in favour of such proposal, excluding any votes by such third party and any of its concert parties.

Under the Takeover Act, a minority shareholder may also make a request for his shares to be purchased by an offeror who holds at least 95% of the issued share capital and the voting rights. This claim must be brought before the Enterprise Chamber of the Court of Appeals in Amsterdam within the three-month period after the closing of the acceptance period of the public offer.

3.1.12.3 ARTICLES OF ASSOCIATION

Without prejudice to the provisions of the Takeover Act as set out in section — 3.1.12.2 above, the Company’s Articles of Association contain a number of provisions that could also trigger the requirement to make a public offer for the shares in the Company.

Pursuant to Article 15 of the Articles of Association, in the event that a direct or indirect acquisition of shares in the Company results in a person acting alone or in concert (as set out in Section 5:45 of the WFT) holding shares or voting rights where the control over the number of shares or votes reaches or exceeds 33 1/3% of the issued share capital of the Company then such person(s) is (are) required to make an unconditional public offer to all shareholders to acquire all of their shares or to procure that such an offer is made. Such offer must comply with all of the applicable regulatory or other legal requirements in each jurisdiction in which the Company’s shares are listed.

Pursuant to Article 16 of the Articles of Association, in the event of a failure to launch such an offer (or if the offer does not satisfy the relevant legal or regulatory requirements in each of the jurisdictions where the Company’s shares are listed) within two months after notification to the Company of shareholdings reaching or exceeding 33 1/3% or failing such notification, within a period of 15 days of receipt of notice from the Board of Directors confirming the obligation to make the public offer, then any person(s) who is (are) required to make the offer shall within the period specified by the notice sent by the Board of Directors exchange for depositary receipts to be issued by the *Stichting Administratiekantoor EADS* (the “**Foundation**”), such percentage of shares they hold over and above the 33 1/3% of the shares issued by the Company (the “**Excess Percentage**”). From the date specified in the notice sent by the Board of Directors, the right to attend meetings, to vote and to receive dividends shall be suspended in respect of the Excess Percentage. If, within a period of 14 days from a further notice from the Board of Directors, the person required to exchange his shares representing his Excess Percentage for depositary receipts still has not done so, then the Company is irrevocably authorised to exchange such shares for depositary receipts issued by the Foundation. The constitutive documents of the Foundation provide that

1

2

3

4

5

Back to Contents

the Foundation shall not have the right to attend shareholders' meetings of the Company as a shareholder, to speak at such meetings and to exercise the voting rights attached to the shares it holds, except if, in the view of the Board of Directors of the Foundation, such action is required for the performance of the mandatory offer provisions in the Articles of Association.

Pursuant to Article 17 of the Articles of Association, the obligation to make a public offer does not apply in the following situations:

- to a transfer of shares to the Company itself or to the Foundation;
- to a securities custody, clearing or settlement institution acting in that capacity, provided that the provisions of Article 16 of the Articles of Association described above shall be applicable where shares are held for persons acting in breach of the provisions of Articles 15 and 16 of the Articles of Association described above;
- to a transfer of shares by the Company or to an issue of shares by the Company on a merger or on an acquisition by the Company of another company or business;
- to a transfer of shares from one party to another party who is a party to an agreement as envisaged in the WMZ to define

“concert parties” where the agreement is entered into before 31 December 2000 (as amended, supplemented or replaced by a new agreement by the admission of one or more new parties or the exclusion of one or more parties), except that this exemption will not apply to a new party that individually or with its subsidiaries and/or group companies holds at least 33 1/3% of the control over shares or votes in the Company; this exemption is intended to exclude the parties to the Participation Agreement (See “— 3.3.2 Relationships with Principal Shareholders”) (as amended, supplemented or replaced by a new agreement by the admission of one or more new parties or the exclusion of one or more parties) from the obligation to make the mandatory offer in the event of a transfer of shares between themselves; or

- to a transfer by a shareholder to a subsidiary in which it holds more than 50% or by a shareholder to a company which holds more than 50% in such transferring shareholder.

3.2 General Description of the Share Capital

3.2.1 Issued Share Capital

As at 31 December 2009, the Company's issued share capital amounted to €816,105,061, consisting of 816,105,061 fully paid-up shares of a nominal value of €1.0 each.

3.2.2 Authorised Share Capital

As at 31 December 2009, the Company's authorised share capital amounted to €3 billion, consisting of 3,000,000,000 shares of €1.0 each.

3.2.3 Modification of Share Capital or Rights Attached to the Shares

Unless such right is limited or eliminated by the shareholders' meeting as described below, holders of shares have a pre-emptive right to subscribe for any newly issued shares *pro rata* to the aggregate nominal value of shares held by them, except for shares issued for consideration other than cash and shares issued to employees of the Company or of a Group company. For the contractual position as to pre-emption rights, see "— 3.3.2 Relationships with Principal Shareholders".

The shareholders' meeting has the power to issue shares. The shareholders' meeting may also authorise the Board of Directors for a period of no more than five years, to issue shares and to determine the terms and conditions of share issuances.

The shareholders' meeting also has the power to limit or to exclude pre-emption rights in connection with new issues of shares, and may authorise the Board of Directors for a period of no more than five years, to limit or to exclude pre-emption rights. All resolutions in this context must be approved by a two-

thirds majority of the votes cast during the shareholders' meeting in the case where less than half of the capital issued is present or represented at said meeting.

In accordance with the seventh resolution passed by the annual shareholders' meeting of EADS held on 27 May 2009, the Board of Directors was granted the powers (i) to issue shares and to grant rights to subscribe for shares which are part of EADS' authorised share capital, provided that such powers shall be limited to 1% of the Company's authorised share capital from time to time and (ii) to limit or exclude preferential subscription rights, in both cases for a period expiring at the annual shareholders' meeting to be held in 2011.

The shareholders' meeting may reduce the issued share capital by cancellation of shares or by reducing the nominal value of the shares by means of an amendment to the Articles of Association, the latter requiring the approval of at least two-thirds of the votes cast at the general meeting.

3.2.4 Securities Granting Access to the Company's Capital

Except for stock options granted for the subscription of EADS shares (See "Corporate Governance — 4.3.3 Long-Term Incentive Plans"), there are no securities that give access, immediately or over time, to the share capital of EADS.

The table below shows the total potential dilution that would occur if all the stock options issued as at 31 December 2009 were exercised:

	Number of shares	% of diluted capital	Number of voting rights	% of diluted voting rights*
Total number of EADS shares issued as of 31 December 2009	816,105,061	96.9%	812,989,265	96.9%
Total number of EADS shares which may be issued following exercise of stock options	25,785,645	3.1%	25,785,645	3.1%
Total potential EADS share capital	841,890,706	100%	838,774,910	100%

* The potential dilutive effect on capital and voting rights of the exercise of these stock options may be limited as a result of the Company's share purchase programmes and in the case of subsequent cancellation of repurchased shares. See "— 3.3.7.1 Dutch law and information on share repurchase programmes".

3.2.5 Changes in the Issued Share Capital since Incorporation of the Company

Date	Nature of Transaction	Nominal value per share	Number of shares issued/ cancelled	Premium*	Total number of issued shares after transaction	Total issued capital after transaction
29 December 1998	Incorporation	NLG 1,000	100	-	100	NLG 100,000

In 2008	Cancellation of shares upon authorisation granted by the annual shareholders' meeting held on 26 May 2008	€1	1,291,381	-	812,723,092	€812,723,092
25 July 2008	Issue of shares for the purpose of an employee offering	€1	2,031,820	€22,084,500	814,754,912	€814,754,912
In 2008	Issue of shares following exercise of options granted to employees***	€1	14,200	€208,030	814,769,112	€814,769,112
31 July 2009	Cancellation of shares upon authorisation granted by the annual shareholders' meeting held on 27 May 2009	€1	22,987	-	814,746,125	€814,746,125
18 December 2009	Issue of shares for the purpose of an employee offering	€1	1,358,936	€13,263,215	816,105,061	€816,105,061

* The costs (net of taxes) related to the initial public offering of the shares of the Company in July 2000 have been offset against share premium for an amount of €55,849,772.

** Predecessor of the AMF.

*** For information on stock option plans under which these options were granted to EADS employees, see "Corporate Governance — 4.3.3 Long-Term Incentive Plans".

3.3 Shareholdings and Voting Rights

3.3.1 Shareholding Structure

EADS combined the activities of Aerospatiale Matra (“**Aerospatiale Matra**” or “**ASM**”), Daimler Aerospace AG (“**DASA AG**”) (with the exception of certain assets and liabilities) and Construcciones Aeronauticas SA (“**CASA**”) pursuant to a series of transactions completed in July 2000.

In this document, the term “**Completion**” relates to the July 2000 completion of the contributions made by Aerospatiale Matra, DASA AG and *Sociedad Estatal de Participaciones Industriales* (“**SEPI**”) (a Spanish state holding company) to EADS to combine such activities into EADS.

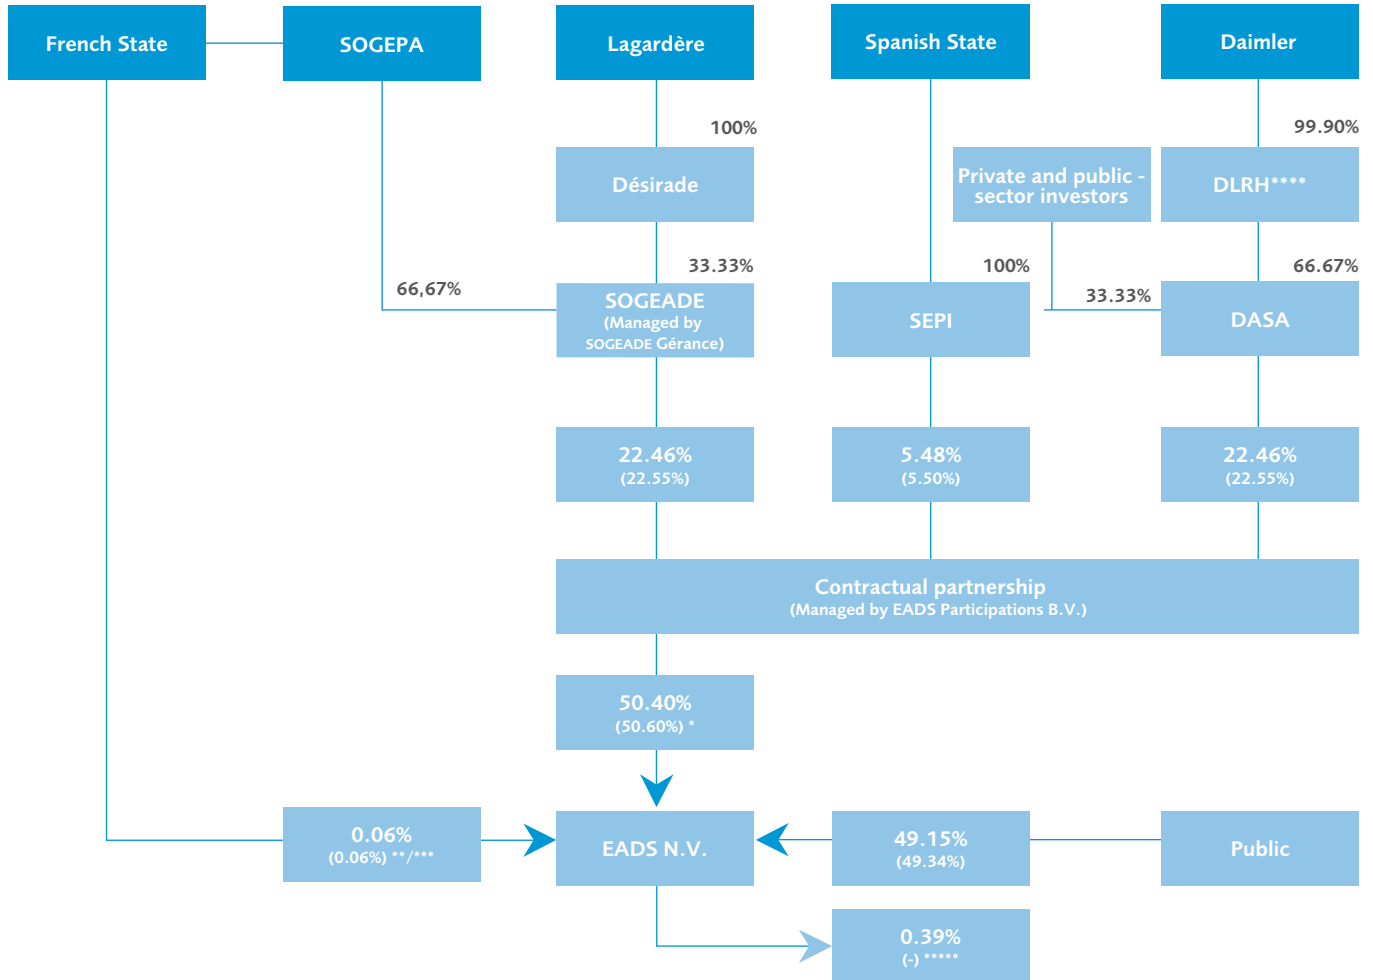

The term “**Indirect EADS Shares**” relates to the EADS shares held by Daimler AG (“**Daimler**”), SEPI and *Société de Gestion de l’Aéronautique, de la Défense et de l’Espace* (“**Sogeadé**”), for which EADS Participations B.V. exercises all the attached voting rights, as well as, for Lagardère SCA (“**Lagardère**”) and *Société de Gestion de Participations Aéronautiques* (“**Sogepa**”), or the companies of their group, the number of EADS shares held indirectly via Sogeadé, reflecting by transparency, their respective interest in Sogeadé.

Unless the context requires otherwise, the shareholdings of DASA AG in EADS are referred to in this document as shareholdings of Daimler, and the rights and obligations of DASA AG pursuant to the agreements described herein are referred to as rights and obligations of Daimler.

As at 31 December 2009, 22.46% of EADS’ share capital was held by DASA AG, which is a 66.67% subsidiary of Daimler Luft- und Raumfahrt Holding AG (“**DLRH**”), a 99.90% subsidiary of Daimler. The remaining 33.33% of DASA AG is held by a consortium of private and public-sector investors. Sogeadé, a French partnership limited by shares (*société en commandite par actions*) whose share capital, as at 31 December 2009, is held 66.67% by Sogepa (a French state holding company) and 33.33% by Désirade (a French *société par actions simplifiée* wholly owned by Lagardère), held 22.46% of EADS’ share capital. Thus, 44.92% of the share capital of EADS was held by Daimler and Sogeadé who jointly control EADS through a Dutch law contractual partnership managed by EADS Participations B.V. (the “**Contractual Partnership**”). SEPI, which is a party to the Contractual Partnership, held 5.48% of the share capital of EADS. The public (including EADS employees) and the Company held, respectively, 49.15% and 0.39% of the share capital of EADS. The *République française* (the “**French State**”) directly held 0.06% of EADS’ share capital, such shareholding being subject to certain specific provisions.

The diagram below shows the ownership structure of EADS as at 31 December 2009 (% of capital (voting rights) before exercise of outstanding stock options granted for the subscription of EADS shares). See “Corporate Governance — 4.3.3 Long-Term Incentive Plans”.

Ownership Structure of EADS as at 31 December 2009

* EADS Participations B.V. exercises the voting rights attached to these EADS shares pledged by Sogead, Daimler and SEPI who retain title to their respective shares.
 ** The French State exercises the voting rights attached to these EADS shares (such shares being placed with the Caisse des Dépôts) in the same way that EADS Participations B.V. exercises the voting rights pooled in the Contractual Partnership.
 *** Shares held by the French State following the distribution without payment of consideration to certain former shareholders of Aerospatiale Matra as a result of its privatisation in June 1999. All the shares currently held by the French State will have to be sold on the market.
 **** DLRH is 99.90% held by Daimler; the balance is held by individual minority shareholders.
 ***** As at 31 December 2009, the Company holds, directly or indirectly through another company in which the Company holds directly or indirectly more than 50% of the share capital, 3,115,796 of its own shares. The EADS shares owned by the Company itself do not carry voting rights.

For the number of shares and voting rights held by members of the Board of Directors and Executive Committee, see “Corporate Governance — 4.2.1 Compensation Granted to Directors and Principal Executive Officers”.

Approximately 2.0% of the share capital (and voting rights) are held by EADS employees as of 31 December 2009.

3.3.2 Relationships with Principal Shareholders

The principal agreements governing the relationships between the founders of EADS are an agreement (the “**Participation Agreement**”) entered into on Completion between Daimler, DASA AG, Lagardère, Sogepa, Sogead and SEPI, and a Dutch law Contractual Partnership agreement entered into on Completion between Sogead, DASA AG, SEPI and EADS Participations B.V. (the “**Contractual Partnership Agreement**”), which repeats certain terms of the Participation Agreement and a certain number of other agreements (in particular, a shareholder agreement (the “**Sogead Shareholders’ Agreement**”) entered into on Completion between Sogepa and Lagardère and an agreement between the French State, Daimler and DLRH). EADS Participations B.V. is a Dutch private company with limited liability (*besloten vennootschap met beperkte aansprakelijkheid*) and is the managing partner of the Contractual Partnership. The Indirect EADS Shares held by Daimler, Sogead and SEPI have been pledged to EADS Participations B.V., which has been granted the exclusive power to exercise the voting rights attached to the pledged shares (including the right to attend and speak at shareholders’ meetings) in accordance with the Contractual Partnership Agreement.

The agreements above contain, among other things, provisions relating to the following matters:

- the composition of the boards of directors of EADS, EADS Participations B.V. and Sogead Gérance (*gérant commandité* of Sogead);
- restrictions on the transfer of EADS shares and Sogead shares;
- pre-emptive and tag-along rights of Daimler, Sogead, Sogepa and Lagardère;
- defences against hostile third parties;
- consequences of a change of control of Daimler, Sogead, Lagardère, Sogepa or SEPI;
- a put option granted by Sogead to Daimler over its EADS shares in certain circumstances;
- specific rights of the French State in relation to certain strategic decisions, regarding among other issues, EADS’ ballistic missiles activity; and
- certain limitations on the extent of the French State’s ownership of EADS.

Further details on the agreements among the principal shareholders of EADS are set out below.

ORGANISATION OF EADS PARTICIPATIONS B.V.

The board of directors of EADS Participations B.V. has an equal number of directors nominated by Daimler and by Sogead, respectively (taking into account proposals made by Lagardère in respect of the Sogead-nominated directors). Daimler and Sogead each nominate two directors, unless otherwise agreed, and the Daimler-directors and the Sogead-directors jointly have the right to nominate and to remove the chairman and the chief executive officer. In addition, SEPI has the right to nominate a director, as long as the shareholding of SEPI in EADS is 5% or more but in any case until the annual shareholders’ meeting to be held in 2012. The chairman shall either have French or German nationality and the chief executive officer shall have the other nationality.

This structure gives Daimler and Sogead equal nominating rights in respect of the majority of the directors of the decision-making body of EADS Participations B.V. All decisions of EADS Participations B.V.’s board of directors shall require the vote in favour of at least four directors, including the vote in favour of all Sogead-directors and all Daimler-directors. The quorum for transacting any business at a meeting of the board of directors of EADS Participations B.V. is one Sogead director and one Daimler director being present.

TRANSFER OF EADS SHARES

Daimler, Sogead, SEPI, Lagardère and Sogepa each have the right to sell its EADS shares on the market, subject to the following conditions:

- if a party wishes to sell any EADS shares, it shall first sell its shares other than its Indirect EADS Shares before exercising its right to sell its Indirect EADS Shares in accordance with the provisions set out below;
- on the sale of Indirect EADS Shares, Daimler (in the case of a sale by Sogead), Sogead (in the case of a sale by Daimler) or Sogead and Daimler (in the case of a sale by SEPI) may either exercise a pre-emption right or sell their respective Indirect EADS Shares on the market in the same proportions as the respective Indirect EADS Shares of the relevant parties bear to each other;
- any transfer of Indirect EADS Shares by either Sogepa or Lagardère is subject to a pre-emption right in favour of Lagardère or Sogepa, as the case may be. In the event that such pre-emption right is not exercised, the Indirect EADS Shares may be sold (a) to an identified third party subject to Lagardère’s or Sogepa’s consent (as the case may be) and also to Daimler’s consent and (b) if such consent is not obtained, the

1

2

3

4

5

Back to Contents

Indirect EADS Shares may be sold on the market, subject to Daimler's pre-emption right referred to above;

- Lagardère and Sogepa shall each have a proportional right to tag-along on a sale of its Indirect EADS Shares; and
- the pre-emption and tag-along rights of Lagardère and Sogepa referred to above do not apply to a transfer of EADS shares directly held by one of them.

Any sale on the market of EADS shares in accordance with the Participation Agreement shall be conducted in an orderly manner so as to ensure the least possible disruption to the market of EADS shares. To this effect, the parties shall consult with each other before any such sale.

CONTROL OF EADS

In the event that a third party to which Daimler or Sogeadé objects (a "**Hostile Third Party**") has a direct or indirect interest in EADS shares equal to 12.5% or more of the number of such EADS shares the voting rights of which are pooled through the Contractual Partnership (a "**Qualifying Interest**"), then, unless a Hostile Offer (as defined below) has been made by the Hostile Third Party or until such time as Daimler and Sogeadé agree that the Hostile Third Party should no longer be considered a Hostile Third Party or the Hostile Third Party no longer holds a Qualifying Interest, the parties to the Participation Agreement shall exercise all means of control and influence in relation to EADS to avoid such Hostile Third Party increasing its rights or powers in relation to EADS.

The parties to the Participation Agreement may accept an offer (whether by way of tender offer or otherwise) by a Hostile Third Party which is not acceptable to either Daimler or Sogeadé (a "**Hostile Offer**"), subject to provisions requiring, *inter alia*, the party wishing to accept, to first offer its EADS shares to Daimler and/or Sogeadé, in which case Daimler and/or Sogeadé may exercise their pre-emption rights in respect of some or all of the EADS shares held by the party wishing to accept the Hostile Offer.

Any sale of EADS shares, other than the EADS Indirect Shares, by Daimler, Sogeadé or Lagardère, at a time when a Hostile Third Party is a shareholder and purchaser of EADS shares on the market, is subject to the pre-emption right of Sogeadé, Daimler and Sogepa respectively. In the case of a sale by Lagardère, if Sogepa does not exercise its right of pre-emption, Daimler has in turn a pre-emption right.

DISSOLUTION OF CONTRACTUAL PARTNERSHIP AND EADS PARTICIPATIONS B.V.

The Contractual Partnership and EADS Participations B.V. will be dissolved and wound up upon the occurrence of certain events (each, a "**Termination Event**") including:

- (i) if the proportion which the Indirect EADS Shares of either Daimler or Sogeadé bears to the total number of EADS shares is less than 10%, unless the difference between the holdings of Daimler and Sogeadé (calculated as a percentage by reference to the number of Indirect EADS Shares held by each of them as against the total number of EADS shares) is 5% or less, in which case the dissolution and winding up shall only occur if the proportion which the Indirect EADS Shares of Daimler or Sogeadé bears to the total number of EADS shares is 5% or less; or
- (ii) if, on a change of control of either Lagardère, Sogepa, Sogeadé or Daimler, no notice of an offer by a third party to purchase the Sogeadé shares or the Indirect EADS Shares held by the party undergoing the change of control (the "**Changed Party**") (which offer the Changed Party wishes to accept) has been served in accordance with the Participation Agreement (see below "Change of Control") within 12 months of the date of the change of control occurring (the absence of notice of an offer by a third party to purchase the Indirect EADS Shares held by SEPI upon a change of control of SEPI does not trigger a dissolution of the Contractual Partnership or EADS Participations B.V. but shall cause SEPI to lose its main rights or liabilities under the Participation Agreement or the Contractual Partnership Agreement).

On the occurrence of a Termination Event, EADS Participations B.V. is prohibited from conducting further business except as is necessary to its liquidation or the liquidation of the Contractual Partnership.

CHANGE OF CONTROL

The Participation Agreement provides, *inter alia*, that if (a) Lagardère or Sogepa undergoes a change of control and Daimler so elects (b) Sogeadé undergoes a change of control and Daimler so elects (c) Daimler undergoes a change of control and Sogeadé so elects (d) SEPI undergoes a change of control and Sogeadé or Daimler so elects then:

- (i) the party undergoing the change of control shall use its reasonable efforts to procure the sale of its Sogeadé interest (if the party undergoing the change of control is Lagardère or Sogepa) or of its Indirect EADS Shares (if the party undergoing the change of control is Daimler, Sogeadé or SEPI) to a third party purchaser on bona fide arm's length terms. When the party subject to the change of control is Lagardère or Sogepa, the third party purchaser shall be nominated with Daimler's consent, not to be unreasonably withheld; and

(ii) in the event that a third party offers to purchase the Sogead interest held by Lagardère or Sogepa or the Indirect EADS Shares held by Daimler, Sogead or SEPI as the case may be, is received and the party undergoing the change of control wishes to accept that offer, such offer shall immediately be notified to (a) Daimler in the case of a change of control occurring to Lagardère or Sogepa, (b) Sogead in the case of the change of control occurring to Daimler, (c) Daimler in the case of the change of control occurring to Sogead, or (d) Daimler or Sogead in the case of the change of control occurring to SEPI (the party notified under (a), (b), (c) or (d) being the “**Non-Changed Party**”). The Non-Changed Party shall have a first right to purchase the Sogead interest or the Indirect EADS shares being offered for sale at the price being offered by the third party. In relation to (d), if Daimler and Sogead have both elected that SEPI procure a third party purchaser, then they shall each have the right to acquire SEPI’s Indirect EADS Shares in the respective proportions which the number of their EADS shares bear to one another at that time. In the event that the Non-Changed Party does not give notice of its intention to purchase the Sogead interest or the Indirect EADS Shares within 30 days of the offer being made, then the Changed Party is obliged to sell such Sogead interest or Indirect EADS Shares to the third party on the terms of the third party’s original offer.

The third party purchaser may not be a competitor of EADS, Sogead or Daimler (as the case may be) nor a member of the Group which has taken control of the Changed Party.

EVENTS OF DEFAULT OTHER THAN CHANGE OF CONTROL

The Participation Agreement provides for certain actions following events of default (other than a change of control) (*i.e.*, insolvency-related or a material breach of the Participation Agreement). In particular, if such an event of default occurs in relation to Daimler, Sogead or SEPI, the non-defaulting party (respectively Sogead, Daimler and Sogead and Daimler acting together) has a call option over the defaulting party’s EADS shares and interest in EADS Participations B.V. If such an event of default occurs in relation to Lagardère or Sogepa, such party is obliged to use its best efforts to sell its interest in the capital of Sogead on bona fide arm’s length terms to a third party purchaser (who must not be a competitor of EADS or Daimler). In the case of a sale by Lagardère, the third party purchaser must be nominated by Sogepa with Daimler’s consent (which may not be unreasonably withheld). In the case of such a sale by Sogepa, Daimler must consent to the sale (again, such consent may not be unreasonably withheld).

SPECIFIC RIGHTS AND UNDERTAKINGS OF THE FRENCH STATE

The French State, not being a party to the Participation Agreement, entered into a separate agreement, governed by French law, with Daimler and DLRH on 14 October 1999 (as amended) pursuant to which:

- the French State undertakes to hold an interest of no more than 15% of the entire issued share capital of EADS through Sogepa, Sogead and EADS Participations B.V.;
- the French State undertakes that neither it nor any of its undertakings will hold any EADS shares directly; and
- in each case disregarding (i) those EADS shares held by the French State following the distribution without payment of consideration to certain former shareholders of Aerospatiale Matra as a result of its privatisation in June 1999 and which will have to be sold on the market; (ii) those shares held by Sogepa or the French State which may be sold or acquired pursuant to the Participation Agreement or the Sogead Shareholders’ Agreement (see below); and (iii) those shares held for exclusively investment purposes.

Moreover, pursuant to an agreement entered into between EADS and the French State (the “**Ballistic Missiles Agreement**”), EADS has granted to the French State (a) a veto right and subsequently a call option on the ballistic missiles activity exercisable in the event that (i) a third party which is not affiliated to the Daimler and/or Lagardère Groups acquires, directly or indirectly, either alone or in concert, more than 10% or any multiple thereof of the share capital or voting rights of EADS or (ii) the sale of the ballistic missiles assets or of the shares of such companies carrying out such activity is considered after the termination of the Sogead Shareholders’ Agreement and (b) a right to oppose the transfer of any such assets or shares during the duration of the Sogead Shareholders’ Agreement.

SOGEADE

Sogead is a French partnership limited by shares (*société en commandite par actions*) the share capital of which is split between Sogepa (66.67%) and Désirade, a French *société par actions simplifiée* (33.33%). The share capital of Désirade is itself wholly owned by Lagardère. Lagardère hence owns indirectly 33.33% of Sogead.

The general partner (*associé commandité*) of Sogead, Sogead Gérance, is a French *société par actions simplifiée* which is the manager of Sogead and the share capital of which is split equally between Sogepa and Lagardère SCA.

Sogead Gérance’s board of directors consists of eight directors, four of them nominated by Lagardère (among whom one shall be designated as the chairman of the board) and four by Sogepa. Decisions of Sogead Gérance’s board shall be approved by a

1

2

3

4

5

Back to Contents

simple majority of directors except for the following matters which require the approval of a qualified majority of six of the eight directors: (a) acquisitions or divestments of shares or assets the individual value of which exceeds €500 million; (b) agreements establishing strategic alliances, or industrial or financial co-operation; (c) a capital increase of EADS of more than €500 million to which no preferential right to subscribe for the shares is attached; (d) any decision to divest or create a security interest over the assets relating to prime contractor status, design, development and integration of ballistic missiles or the majority shareholdings in the companies Cilas, Sodern, Nuclétudes and the GIE Cosyde (each a “**Sogeadé Reserved Matter**”). The decisions contemplated under (d) above are also governed by the Ballistic Missiles Agreement (see above “Specific Rights and Undertakings of the French State”).

When a vote of Sogeadé Gérance’s board on such matters does not reach the qualified majority of six directors by reason of any of the Sogepa-nominated directors casting a negative vote, the Sogeadé-nominated directors on the board of EADS Participations B.V. are obliged to vote against the proposal. This means that the French State as the owner of Sogepa can veto any decisions on these matters within EADS Participations B.V. and in turn within EADS as long as the Sogeadé Shareholders’ Agreement remains in existence.

In addition, in the case where the board of directors of EADS Participations B.V. and/or the Board of Directors of EADS would be called to address the following matters:

- (a) appointment/removal of the Chairman and the Chief Executive Officer of EADS and appointment/removal of the Chief Executive Officer of Airbus;
- (b) investments, projects, launch of new products or divestments within the Group with an individual value/amount exceeding €500 million;
- (c) strategic and cooperation agreements;
- (d) modifications of the authorised share capital of EADS and increase in the issued capital of EADS, with the exception of capital increases for the purposes of ESOP or other securities issuances in favour of employees for an amount, per year or per plan, less than 2% of the issued capital;
- (e) modifications of (1) the Articles of Association of EADS, (2) the internal rules for the Board of Directors and (3) the internal rules for the Executive Committee;
- (f) change of name, place of incorporation and nationality of EADS; and
- (g) significant decisions in connection with the ballistic missiles activities of EADS.

Sogeadé Gérance’s board shall previously meet to come to a decision on the appropriateness of any of the above-mentioned matters. In this respect, the decision of Sogeadé Gérance’s board shall be in writing and require the approval of a qualified majority of six of the eight directors; it being understood that the Sogeadé-nominated directors on the board of EADS Participations B.V. shall in no event be bound by such decision. Such procedure shall not apply in the case where the relevant matter will have been examined as a Sogeadé Reserved Matter in accordance with the above.

The shareholding structure of Sogeadé shall reflect at all times the indirect interests of all the shareholders of Sogeadé in EADS.

In certain circumstances, in particular in the event of a change of control of Lagardère, Lagardère shall grant a call option over its Sogeadé shares to any non-public third party designated by Sogepa and approved by Daimler. This option may be exercised during the term of the Sogeadé Shareholders’ Agreement on the basis of the market price for the EADS shares.

The Sogeadé Shareholders’ Agreement shall terminate if Lagardère or Sogepa ceases to hold at least 20% of the capital of Sogeadé, except that: (a) the provisions relating to the call option granted by Lagardère described above shall remain in force as long as the Participation Agreement is in force, (b) as long as Sogepa holds at least one Sogeadé share, it will remain entitled to nominate a Sogeadé Gérance director whose approval will be required with respect to any decision to divest or create a security interest over the assets relating to prime contractor status, design, development and integration of ballistic missiles activity or the majority shareholdings in the companies Cilas, Sodern, Nuclétudes and the GIE Cosyde; and (c) the Sogeadé Shareholders’ Agreement will be terminated in the event of a dissolution of EADS Participations B.V. caused by Daimler. In the latter case, the parties have undertaken to negotiate a new shareholders’ agreement in the spirit of the shareholders’ agreement between them dated 14 April 1999 relating to Aerospatiale Matra and with regard to their respective shareholdings in Sogeadé at the time of the dissolution of EADS Participations B.V.

PUT OPTION

Under the Participation Agreement, Sogeadé has granted a put option to Daimler over its EADS shares which shall be exercisable by Daimler, (i) in the event of a deadlock arising from the exercise by Sogepa of its rights relating to certain strategic decisions (listed above under the description of Sogeadé) other than those relating to the ballistic missiles activity or (ii) during certain periods provided that in both cases the French State still holds any direct or indirect interest in EADS shares. The put option may only be exercised in respect of all and not some only of Daimler’s EADS shares.

The exercise price of the option will be calculated on the basis of an average market price for EADS shares.

In the event that Daimler exercises the put option granted to it by Sogead, Sogead will acquire the EADS shares from Daimler. However, Lagardère has the right to require Sogepa to substitute itself for Sogead in relation to the acquisition of Daimler's EADS shares following the exercise by Daimler of the put option. Such substitution right has been accepted by Daimler. In the event that Lagardère does not exercise such substitution right, Lagardère would have to provide its pro rata part of the financing necessary for such acquisition. Sogepa undertakes to provide its pro rata part of the financing corresponding to its rights in Sogead. Should Lagardère decide not to take part in the financing, (a) Sogepa undertakes to substitute itself for Sogead to buy the shares sold by Daimler as a result of the exercise of its put option and (b) Sogepa or Lagardère may request the liquidation of Sogead and EADS Participations B.V. and the termination of the Sogead Shareholders' Agreement (notwithstanding the termination provisions of the Sogead Shareholders' Agreement described under the paragraph "Sogead" above). In that case, Lagardère could freely sell its EADS shares on the market or in a block sale to a third party.

PLEDGE OVER EADS' SHARES GRANTED TO EADS PARTICIPATIONS B.V.

Upon Completion and in order to secure their undertakings under the Contractual Partnership Agreement and the Participation Agreement, Sogead, Daimler and SEPI granted a pledge over their respective Indirect EADS Shares to EADS Participations B.V. for the benefit of EADS Participations B.V. and the other parties to the Contractual Partnership Agreement.

DADC

EADS holds 75% of the shares in DADC Luft- und Raumfahrt Beteiligungs AG ("**DADC**") (the other 25% being held by DLRH). The share capital of Dornier GmbH is held as to 97.1% by DADC and as to 2.9% by the Dornier family. In shareholders' meetings, DADC is entitled to more than 95.2% and the Dornier family to less than 4.8% of the voting rights in Dornier GmbH. DADC and Dornier GmbH have entered into a control and profit and loss transfer agreement.

A considerable number of shareholders' resolutions in Dornier GmbH require a majority of 100% of the votes cast in the shareholders' meeting notably resolutions to dissolve the Company, alterations of the Articles of Association if they terminate, limit or have an impact on the rights of the minority shareholders, reduction of share capital, mergers (unless Dornier GmbH is the surviving entity), the transfer of holdings in other enterprises or the transfer of whole areas of enterprise activities with the exception of transfers of assets in return for shares or as a contribution in kind or to a company associated with Daimler, which is assumed to be the case if Daimler

controls at least 20% of its share capital. The same requirement applies with regard to all transfers of shares of Dornier GmbH held by the Daimler Group (including associated enterprises) subject to certain exceptions including the transfer to other Daimler Group companies (including associated enterprises). Furthermore, the Dornier family receives a guaranteed dividend from Dornier GmbH (depending on the nature of the shares) of 8.7% or 15% of the nominal amount of their shares plus any corporation tax credits. The guaranteed dividend is indexed. Daimler has guaranteed the payment of the minimum dividend to the Dornier family shareholders. In the case of the profit and loss transfer agreement, which presently exists between DADC and Dornier GmbH, the Dornier family shareholders are entitled to receive payments corresponding at least to the amount which they would be entitled to in the absence of such profit and loss transfer agreement. Internally DADC has assumed this obligation.

On 30 November 1988 Daimler and the Dornier family entered into a separate agreement to strengthen the rights of Daimler and, simultaneously, to protect the economic interests of the minority shareholders. The latter can, in particular, demand that their shares in Dornier GmbH be bought (i) for cash consideration or (ii) in exchange for Daimler shares or (iii) in exchange for shares in a company in which, or under which, Daimler concentrates its aerospace activities by Daimler or another company associated with Daimler and nominated by Daimler. On 29 March 2000 Daimler, DLRH, DADC, EADS Deutschland GmbH and DASA AG entered into an agreement according to which Daimler has the right to demand from DADC to buy the shares so offered by the Dornier family shareholders. Daimler shall reimburse DADC for any amount to be paid being above the fair market value of the shares. Moreover, DADC will assume certain other rights and obligations relating to the protection of the interests of the Dornier family.

On 29 December 2004, Silvius Dornier and Daimler entered into an agreement to transfer all of the remaining shares of Silvius Dornier in Dornier GmbH (3.58%) to Daimler or another company of the Daimler Group nominated by Daimler and to settle all of the rights and potential claims of Silvius Dornier resulting from or in connection with his shareholding in Dornier GmbH. None of the other family shareholders exercised their three month right of first refusal to acquire these shares so that the legal transfer became effective on 17 April 2005. According to the above mentioned agreement between Daimler, DLRH, DADC, EADS Deutschland GmbH and DASA AG ("*Handhabungsvereinbarung*"), DADC had irrevocably offered to Daimler to buy these shares at market value upon effectiveness of their sale to Daimler, which offer was accepted by Daimler and the deal being brought to closure on 3 May 2005.

Under the terms of the business combination agreements entered into in the context of the creation of EADS, DLRH has undertaken to indemnify Lagardère (for itself and on behalf of

1

2

3

4

5

Back to Contents

each member of the Lagardère Group) and SEPI and shall keep them indemnified, against (save in respect of any consequential loss not foreseeable by DLRH (or any member of the Daimler Group)) all or any costs, claims, demands, expenses, losses or liabilities that they (or any of them) may suffer or incur from the date of the business combination agreements entered into in the context of the creation of EADS as a result of all or any of the shareholders of Dornier GmbH other than a member of the DASA Group obtaining or seeking to obtain any rights or remedies against Lagardère (or any member of the Lagardère Group), SEPI, the Contractual Partnership, EADS

Participation B.V., DASA AG, EADS or any entity contributed by or on behalf of Daimler which is to become a member of the Group or any member of the DASA AG Group. This indemnity shall also extend to EADS to the extent that such protection is not provided for in the transfer of the DASA business to EADS.

Other than the relationships between the Company and its principal shareholders described above in this Section 3.3.2, there are no potential conflicts of interest between the duties to the Company of the Directors and their respective private interests or other duties.

3.3.3 Form of Shares

The shares of EADS are in registered form. The Board of Directors may decide with respect to all or certain shares, on shares in bearer form.

Shares shall be registered in the shareholders' register without the issue of a share certificate or, should the Board of Directors

so decide, with respect to all or certain shares, with the issue of a certificate. Share certificates shall be issued in such form as the Board of Directors may determine. Registered shares shall be numbered in the manner to be determined by the Board of Directors.

3.3.4 Changes in the Shareholding of the Company Since its Incorporation

The Company was founded with an authorised share capital of 500,000 Netherlands Guilders (“NLG”) divided into 500 shares each having a nominal value of 1,000 NLG, of which 100 were issued to Aerospatiale Matra on 29 December 1998. These shares were transferred to DASA AG by way of notarised transfer certificate on 28 December 1999.

The changes in the shareholding of the Company since its initial public offering and listing are set forth below (for a description of the changes in the issued share capital of the Company since its incorporation, see “— 3.2.5 Changes in the Issued Share Capital Since Incorporation of the Company”).

Since July 2000, 4,293,746 EADS shares have been distributed without payment of consideration by the French State to certain former shareholders of Aerospatiale Matra as a result of its privatisation in June 1999. The last distribution took place in July 2002.

In addition, in January 2001, the French State and Lagardère sold on the market all of their EADS shares (respectively 7,500,000 and 16,709,333 EADS shares) other than their Indirect EADS Shares (and, in the case of the French State, other than the EADS shares to be distributed to former shareholders of Aerospatiale Matra, see “— 3.3.2 Relationships with Principal Shareholders — Specific Rights and Undertakings of the French State”) that

they held as a result of the non-exercise of the over-allotment option granted to the underwriters in the context of the initial public offering carried out by the Company for the purpose of its listing in July 2000 (including, in the case of Lagardère, those shares other than its Indirect EADS Shares purchased from the French Financial Institutions at the end of the exercise period of the over-allotment option).

On 8 July 2004, Daimler announced that it had placed on the market (in the context of a hedging transaction) all of its EADS shares (22,227,478 EADS shares), representing 2.73% of the capital and 2.78% of the EADS voting rights at that date, except for its Indirect EADS Shares.

On 11 November 2005, DASA AG transferred its entire interest in EADS to its wholly owned subsidiary DaimlerChrysler Luft-und Raumfahrt Beteiligungs GmbH & Co. KG (“DC KG”). However, in November 2006, DC KG then transferred its entire interest in EADS back to DASA AG.

On 4 April 2006, Daimler and Lagardère announced the entry into simultaneous transactions aimed at reducing by 7.5% each their respective shareholdings in EADS. Daimler entered into a forward sale agreement of approximately 61 million EADS shares with a group of investment banks. Daimler indicated that it had lent these shares to the banks in anticipation of the settlement

of the forward sale. Lagardère issued mandatory exchangeable bonds. The EADS shares deliverable at the maturity of the bonds represented a maximum of 7.5% of the share capital of EADS, or approximately 61 million EADS shares, and were delivered in three equal tranches representing 2.5% of the share capital of EADS. The first two tranches were delivered in June 2007 and June 2008, with delivery of the third tranche brought forward from June 2009 to March 2009, as discussed below.

On 8 September 2006, the Company was notified that JSC Vneshtorgbank (formerly Bank of Foreign Trade) acquired 41,055,530 shares of EADS, representing 5.04% of the share capital of EADS at that date.

On 9 February 2007, Daimler reached an agreement with a consortium of private and public-sector investors by which it effectively reduced its shareholding in EADS from 22.5% to 15%, while keeping and maintaining the balance of voting rights between German and French controlling shareholders. Pursuant to this agreement, on 13 March 2007, Daimler has placed its entire 22.5% equity interest in EADS into a new company controlled by Daimler, in which the consortium of investors has acquired a one-third interest through a special-purpose entity. This effectively represents a 7.5% stake in EADS. Daimler continues to control the voting rights of the entire 22.5% package of EADS shares. Daimler has the option of dissolving the new structure on 1 July 2010 at the earliest. If the structure is dissolved, Daimler has the right either to provide the investors with EADS shares or to pay cash compensation. If EADS shares are provided, the German State, and the French State and Lagardère through Sogead, will be entitled to pre-empt

such EADS shares to retain the balance between the German and the French side. This transaction constitutes a specific exception to the agreements described in “— 3.3.2 Relationships with Principal Shareholders”.

On 26 December 2007, JSC Vneshtorgbank has sold and transferred 41,055,530 EADS shares to the Bank for Development and Foreign Economic Affairs (*Vnesheconombank*). EADS was notified of such transaction thereafter.

On 26 January 2009, Lagardère and Natixis, the sole subscriber to and sole holder of the outstanding mandatory exchangeable bonds issued by Lagardère in 2006, signed an amendment to the subscription contract whereby they agreed, on the initiative of Natixis, to bring forward the redemption date of the mandatory exchangeable bonds – and consequently, the delivery date of the third tranche of EADS shares – from 25 June 2009 to 24 March 2009. Under the terms of this amendment, Lagardère delivered 20,370,000 EADS shares, representing 2.5% of the capital and voting rights of EADS, to Natixis on 24 March 2009.

On 19 March 2010, Daimler and the consortium of private and public-sector investors confirmed to continue the agreement reached on 9 February 2007 concerning the equity interests and voting rights in EADS (as discussed above). At Germany’s Federal Chancellery on 16 March 2010, Daimler and the investors stated their willingness to continue the existing agreement without any changes. As a result, Daimler continues to hold 22.5% of the voting rights in EADS while its economic interest is still 15%. Thus, the existing balance of voting rights between German and French shareholders remains unchanged.

The evolution in ownership of the share capital and voting rights of the Company over the past three years is set forth in the table below:

Shareholders	Position as at 31 December 2009			Position as at 31 December 2008			Position as at 31 December 2007		
	% of capital	% of voting rights	Number of shares	% of capital	% of voting rights	Number of shares	% of capital	% of voting rights	Number of shares
DASA AG	22.46%	22.55%	183,337,704	22.50%	22.59%	183,337,704	22.52%	22.64%	183,337,704
Sogead	22.46%	22.55%	183,337,704	25.00%	25.10%	203,707,704	27.53%	27.67%	224,077,704

Back to Contents

To the knowledge of the Company, except as disclosed previously in “— 3.3.2 Relationships with Principal Shareholders”, there are no pledges over the shares of the Company.

The Company requested a disclosure of the identity of the beneficial holders of its shares held by identifiable holders (“*Titres au porteur identifiable*”) holding more than 2,000 shares each. The study, which was completed on 31 December 2009,

resulted in the identification of 1,987 shareholders holding a total of 353,399,213 EADS shares (including 6,862,789 shares held by Iberclear on behalf of the Spanish markets and 42,041,242 shares held by Clearstream on behalf of the German market).

The current shareholding structure of the Company is as shown in the diagram in “— 3.3.1 Shareholding Structure”.

3.3.5 Persons Exercising Control over the Company

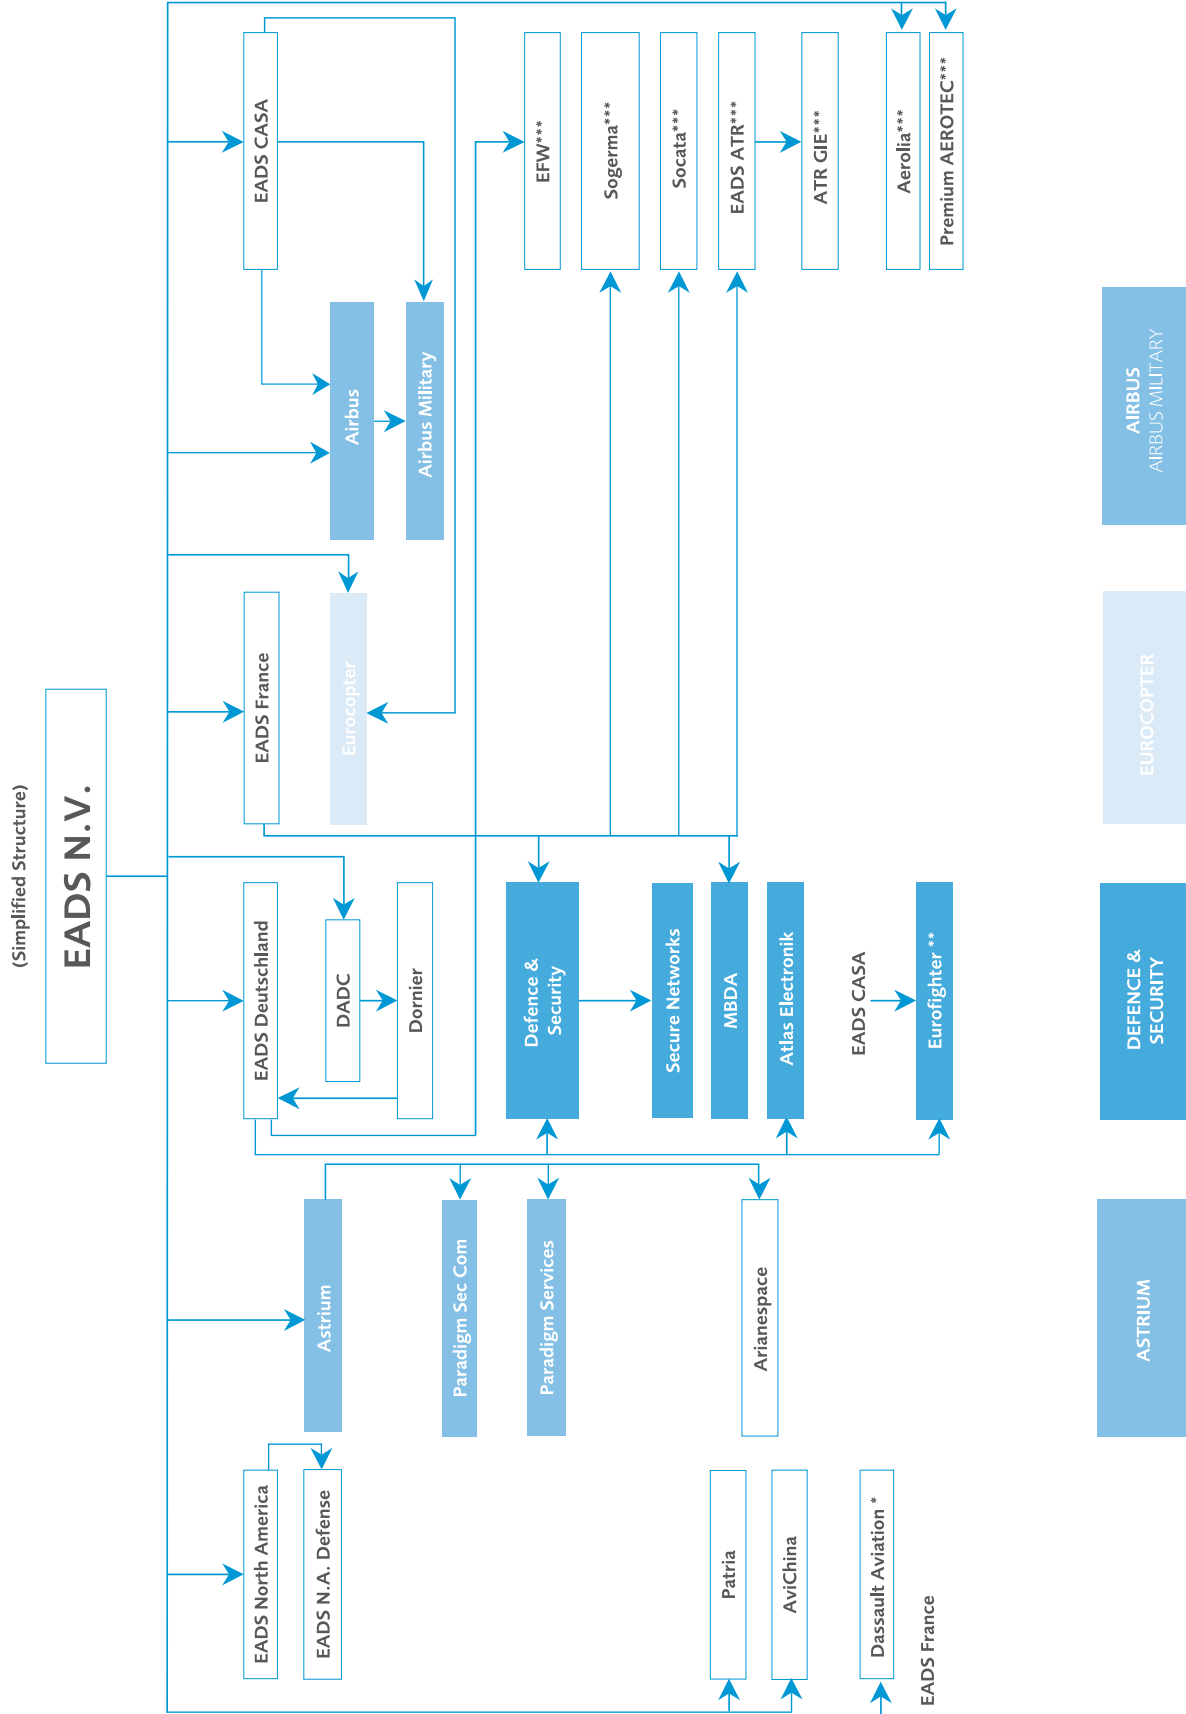

See “— 3.3.1 Shareholding Structure” and “— 3.3.2 Relationships with Principal Shareholders”.

3.3.6 Simplified Group Structure Chart

The following chart illustrates the simplified organisational structure of EADS as of 31 December 2009, comprising four divisions and the main business units. For ease of presentation, intermediate holding companies have been omitted. The coloured boxes denote entities forming part of one of EADS’ four divisions. The non-coloured boxes denote entities that are holding companies or participations not within one of EADS’

four divisions and do not directly form part of the management responsibility of a specified director. EFW, Sogerma, ATR, Aerolia and Premium AEROTEC are allocated to “Other Businesses” and do not form part of EADS’ four divisions. See “Information on EADS’ Activities — 1.1.1 Overview — Organisation of EADS Businesses”.

EADS Group Main Shareholdings

* EADS holds its interest in Dassault Aviation through EADS France.

** EADS' interest in Eurofighter is jointly held by EADS Deutschland and EADS CASA.

*** EADS North America, ATR, Sogerma and Socata are consolidated within "Other Businesses" for purposes of segment reporting; EFW, Aerolia and Premium AEROTEC are consolidated within Airbus. In early January 2009, EADS sold a 70% stake in Socata to Daher, while retaining the remaining 30% stake.

3.3.7 Purchase by the Company of its Own Shares

3.3.7.1 DUTCH LAW AND INFORMATION ON SHARE REPURCHASE PROGRAMMES

Pursuant to EC Regulation No. 2273/2003, the Company is subject to conditions for share repurchase programmes and disclosure relating thereto, as described below.

Under Dutch Civil law, the Company may acquire its own shares, subject to certain provisions of the law of the Netherlands and the Articles of Association, if (i) the shareholders' equity less the payment required to make the acquisition does not fall below the sum of paid-up and called portion of the share capital and any reserves required by the law of the Netherlands and (ii) the Company and its subsidiaries would not thereafter hold or hold in pledge shares with an aggregate nominal value exceeding one-half (50%) of the Company's issued share capital. Share acquisitions may be effected by the Board of Directors only if the shareholders in general meeting have authorised the Board of Directors to effect such repurchases. Such authorisation may apply for a maximum period of 18 months.

Shares held by the Company do not carry voting rights. Usufructuaries and pledgees of shares that are held by the Company are, however, not excluded from their voting rights in such cases where the right of usufruct or pledge was vested before the share was held by the Company.

The annual shareholders' meeting of EADS held on 27 May 2009 authorised the Board of Directors, in a resolution that renewed the previous authorisation given by the annual shareholders' meeting of EADS held on 26 May 2008, for a period of 18 months from the date of such meeting, to repurchase shares of the Company, by any means, including derivative products, on any stock exchange or otherwise, as long as, upon such repurchase, the Company will not hold more than 10% of the Company's issued share capital and at a price not less than the nominal value and not more than the higher of the price of the last independent trade and the highest current independent bid on the trading venues of the regulated market of the country in which the purchase is carried out.

A resolution will be submitted to the annual shareholders' meeting of EADS called for 1 June 2010 in order to renew the authorisation given by the annual shareholders' meeting held on 27 May 2009 and authorise the Board of Directors, for a new period of 18 months as from the date of such meeting, to repurchase shares of the Company, by any means, including derivative products, on any stock exchange or otherwise, as long as, upon such repurchase, the Company will not hold more than 10% of the Company's issued share capital and at a price

not less than the nominal value and not more than the higher of the price of the last independent trade and the highest current independent bid on the trading venues of the regulated market of the country in which the purchase is carried out.

As of the date of this document, the Company held 3,116,846 of its own shares, representing 0.38% of its share capital.

3.3.7.2 FRENCH REGULATIONS

As a result of its listing on a regulated market in France, the Company is subject to the regulations summarised below.

Pursuant to Articles 241-1 to 241-6 of the AMF General Regulations, the purchase by a company of its own shares requires the publication of the description of the share repurchase programme. Such description must be published prior to the implementation of the share repurchase programme.

Under Articles 631-1 to 631-4 of the AMF General Regulations, a company may not trade in its own shares for the purpose of manipulating the market. Articles 631-5 and 631-6 of the AMF General Regulations also define the conditions for a company's trading in its own shares to be valid.

After purchasing its own shares, the Company is required to disclose on its website specified information regarding such purchases within at least seven trading days.

Additionally, the Company must notably report to the AMF, on at least a monthly basis, all the specified information regarding such purchases previously published on its website and information concerning the cancellation of such repurchased shares.

3.3.7.3 GERMAN REGULATIONS

As a foreign issuer, the Company is not subject to German rules on repurchasing its own shares, which only apply to German issuers.

3.3.7.4 SPANISH REGULATIONS

As a foreign issuer, the Company is not subject to Spanish rules on trading in its own shares, which only apply to Spanish issuers.

However, according to the Conduct Rules under the Spanish Securities Act 24/1988 of 28 July 1988, the Company may not trade in its own shares for the purpose of manipulating the market.

3.3.7.5 DESCRIPTION OF THE SHARE REPURCHASE PROGRAMME TO BE AUTHORISED BY THE ANNUAL SHAREHOLDERS' MEETING TO BE HELD ON 1 JUNE 2010

Pursuant to Articles 241-2-I and 241-3 of the AMF General Regulations, below is a description of the share repurchase programme (“*descriptif du programme*”) to be implemented by the Company:

- **Date of the shareholders’ meeting to authorise the share repurchase programme:** 1 June 2010.
- **Intended use of the EADS shares held by the Company as at the date of this document:** the reduction of share capital by cancellation of all or part of the repurchased shares, in particular to avoid the dilution effect related to certain share capital increases for cash (i) reserved or to be reserved for employees of the EADS Group and/or (ii) carried out or to be carried out in the context of the exercise of stock options granted or to be granted to certain EADS Group employees: 3,116,846 shares.

For information on shares held by EADS at the date of the entry into force of EC Regulation No. 2273/2003 and still held by EADS at the date of this document, see below.

- **Purposes of the share repurchase programme to be implemented by the Company (by order of decreasing priority, without any effect on the actual order of use of the repurchase authorisation, which will be determined on a case-by-case basis by the Board of Directors based on needs and possibilities):**
 - the reduction of share capital by cancellation of all or part of the repurchased shares, in particular to avoid the dilution effect related to certain share capital increases for cash (i) reserved or to be reserved for employees of the EADS Group and/or (ii) carried out or to be carried out in the context of the exercise of stock options granted or to be granted to certain EADS Group employees, it being understood that the repurchased shares shall not carry any voting or dividend rights;
 - the owning of shares for the performance of obligations related to (i) debt financial instruments convertible into EADS shares, or (ii) employee share option programmes or other allocations of shares to EADS Group employees;
 - the purchase of shares for retention and subsequent use for exchange or payment in the framework of potential external growth transactions; and
 - the liquidity or dynamism of the secondary market of the EADS shares carried out pursuant to a liquidity agreement to be entered into with an independent investment services provider in compliance with the decision of the AMF dated 1 October 2008 related to approval of liquidity agreements recognised as market practices by the AMF.

➤ Procedure:

- maximum portion of the issued share capital that may be repurchased by the Company: 10%;
- maximum number of shares that may be repurchased by the Company: 81,610,506 shares, based on an issued share capital of 816,105,061 shares as of the date of this document. Assuming the exercise of all stock options outstanding as of the date of this document, the threshold of 10% would represent 84,130,257 shares based on the 841,302,571 shares which would make up the entire fully-diluted share capital of the Company;
- the amounts to be paid in consideration for the purchase of the treasury shares must not, in accordance with applicable Dutch law, exceed the equity components which are repayable or distributable to the shareholders. “Equity components repayable or distributable to the shareholders” means the contribution premiums (in relation to contributions in kind), the issue premiums (in relation to cash contributions) and the other reserves as set out in the financial statements of EADS, from which the repurchase price for the treasury shares must be deducted.

As at 31 December 2009, the respective values of each of these EADS equity components which are by nature repayable or distributable to the shareholders were: €7,683,000,000 (contribution premiums), €-2,360,000,000 (other reserves and retained earnings, including net profit for the year) and €-109,000,000 (treasury shares), *i.e.*, an aggregate amount of €5,214,000,000.

EADS reserves the right to implement the share purchase programme to its full extent and undertakes not to exceed, directly or indirectly, the threshold of 10% of the issued share capital as well as the amount of €5,214,000,000 throughout the term of the programme.

Finally, EADS undertakes to maintain at any time a sufficient number of shares in public hands to meet the thresholds of NYSE Euronext;

- shares may be bought or sold at any time (including during a public offering) to the extent authorised by the stock exchange regulations and by any means, including, without limitation, by means of block trades and including the use of options, combinations of derivative financial instruments or the issue of securities giving rights in any way to EADS shares within the limits set out in this document. Moreover, EADS will use call options and swaps that have been acquired pursuant to the agreements it had entered into during the previous share repurchase programme (see below) and does not exclude the possibility of using a structure of transaction similar to the one that had been used in the previous share repurchase programme in order to repurchase its own shares.

1

2

3

4

5

Back to Contents

The portion of shares repurchased through the use of block trades may amount to all the shares to be repurchased in the context of this programme.

In addition, in the event that derivative financial instruments are used, EADS will ensure that it does not use mechanisms which would significantly increase the volatility of the shares in particular in the context of call options;

- characteristics of the shares to be repurchased by the Company: shares of EADS, a company listed on Euronext Paris, on the *regulierter Markt* of the Frankfurt Stock Exchange and on the Madrid, Bilbao, Barcelona and Valencia Stock Exchanges;
- Daimler, DASA AG, the French State, Lagardère, SEPI, Sogea and Sogepa will retain all of their rights, depending on the circumstances, to sell their available EADS shares to EADS as part of this share repurchase programme;
- maximum purchase price per share: €50.
- **Term of the share repurchase programme:** this share repurchase programme shall be valid until 1 December 2011 inclusive, *i.e.*, the date of expiry of the authorisation requested from the annual shareholders' meeting to be held on 1 June 2010. As one of the main aims of this EADS share repurchase programme is related to the possible exercise by EADS Group employees of stock options granted to them from 2000 to 2006, it is currently intended (i) that such a programme be continued and renewed until at least 17 December 2016 (16 December 2016 being the latest date upon which an employee of the EADS Group may exercise all or part of his/her stock options granted in 2006) and (ii) that the EADS annual shareholders' meeting be asked to renew the authorisations until such date.

- **Declaration by the Company of transactions carried out in relation to its own shares from 27 May 2009 to the date of this document:** on 31 July 2009, EADS cancelled 22,987 repurchased shares to compensate the dilution effect resulting from the issuance of shares in 2008 following the exercise of stock options under the 2000 and 2002 stock option plans.

The 1,843,814 EADS shares held by EADS at the date of the entry into force of EC Regulation No. 2273/2003 of 22 December 2003 on 13 October 2004 and still held by EADS at the date of this document shall be, in order of decreasing priority, either (i) cancelled pursuant to a decision to be made, according to Dutch law, by an annual shareholders' meeting, to avoid the dilution effect related to certain share capital increases for cash carried out, during the fiscal year preceding such annual shareholders' meeting, in the context of an EADS employee share ownership programme and/or upon the exercise of stock options granted to certain EADS Group employees, or (ii) retained in order to allow the performance of certain obligations described within the aims of the share repurchase programme referred to in this document, or (iii) used for exchange or payment in the framework of a potential external growth transaction, or (iv) sold in the context of a liquidity agreement.

As of the date of this document, EADS has not entered into any liquidity agreement with an independent investment services provider in the context of the share repurchase programme.

In the context of the share repurchase programme, EADS has used derivative financial instruments (see below). These derivative financial instruments (call options) have the characteristics set out in the table below.

Opening positions as of the date of this document

	Opening position on the purchase		Opening position on the sale	
	Call purchased	Forward sale	Call purchased	Sale
Number of Shares	8,686,633	-	-	-
Average Maximum Maturity Date*	9 August 2012	-	-	-
Average Exercise Price*	-	-	-	-

* See "Corporate Governance — 4.3.3 Long-Term Incentive Plans"

In order to compensate for the dilution effect related to the share capital increases in cash which would result from the exercise of the stock options granted to certain employees of the EADS Group in 2000, 2001 and 2002, EADS has implemented a share repurchase programme according to the neutral delta method. In this regard, EADS has entered into the following agreements: (i) call options agreements allowing EADS to acquire from a top ranking French bank a number of EADS' shares equal to the number of shares to be created as a result of the exercise of stock options granted to certain

employees of the EADS Group in 2000, 2001 and 2002, and (ii) swap agreements for the periodical adjustment of an amount in cash equal to the premiums paid by EADS to a top ranking French bank pursuant to the call options agreements, in accordance with the neutral delta method.

Pursuant to these agreements, the call options which EADS acquired from a top ranking French bank, have the same terms (as to exercise prices, exercise dates, quantities and expiry dates) as the stock options granted pursuant to the 2000,

2001 and 2002 stock option plans. If the EADS share price increases, the top ranking French bank must buy the number of EADS shares which then derived from the increase in price according to the delta neutral method formula. The total amount paid for these shares by the top ranking French bank corresponds to the financial charge borne by EADS, as determined from the variable amounts in the swap agreement. On the other hand, in the case of a reduction in the EADS share price, the top ranking French bank must sell a number of EADS shares which derived from the reduction in the share price according to the neutral delta method formula. The total amount received by the top ranking French bank for the sale of these shares corresponds to the financial revenues received by EADS as determined from the variable amounts in the swap contract. Under these conditions, the final amount due as a result of the purchases of the call options is only known at the time of the payment as determined from the last variable amount of the swap contract.

The structure of the transaction aims at covering the dilution effect and the price risk for EADS linked to the exercise of stock options granted to certain EADS Group employees in 2000, 2001 and 2002.

Within this context, EADS uses the internal control procedures put in place by the Company in order to ensure the reliability of the management of the risks linked to these call options and swap. The procedures and tools for reporting

have been set up, the responsibility and powers have been delegated to the Finance and Treasury department of EADS which has responsibility for all operational decisions and all activities within its competence. The relevant competent bodies within the organisation must be made aware of all substantial transactions, activities and risks.

From an accounting standpoint, the call options qualify as equity instruments, provided that they are physically settled in EADS' own stock (IAS 32.16). The initial accounting led to a reduction in cash balances for the premiums paid and in stockholder's equity for the same corresponding amount. With each variable payment made in application of the delta neutral method formula, there is a corresponding impact on cash and on equity to reflect the cumulative premiums paid on the call options. Upon exercise of the call options, EADS decreases cash by the amount paid (strike price times number of options) and deducts treasury shares from shareholder's equity. Variations in the market value of the call options are not recognised in the financial statements. All such transactions are therefore neutral on the income statement.

The top ranking French bank has contractually undertaken to comply with the regulations in force in relation to repurchase procedures applicable to EADS and in particular the provisions of Articles 241-1 to 241-6 and 631-1 *et seq.* of the AMF General Regulations.

3.4 Dividends

3.4.1 Dividends and Cash Distributions Paid Since the Incorporation of the Company

Cash distributions paid to the shareholders since the incorporation of the Company are set forth in the table below:

Financial Year	Date of the cash distribution payment	Gross amount per share*
2000	27 June 2001	€0.50
2001	28 June 2002	€0.50
2002	12 June 2003	€0.30
2003	4 June 2004	€0.40
2004	8 June 2005	€0.50
2005	1 June 2006	€0.65
2006	16 May 2007	€0.12
2007	4 June 2008	€0.12
2008	8 June 2009	€0.20

* Note: figures have not been adjusted to take into account changes in the number of shares outstanding.

3.4.2 Dividend Policy of EADS

EADS' dividend policy is determined by the Board of Directors, which may consider a number of factors, including the Group's financial performance, future cash needs as well as the dividends paid by other international companies in the same sector. EADS cannot guarantee the amount of dividends that may be paid in respect of any financial year.

Exceptionally, due to the significant loss in 2009, the Board of Directors has recommended no dividend payment in respect of such year.

3.4.3 Unclaimed Dividends

Pursuant to Article 31 of the Articles of Association, the claim for payment of a dividend or other distribution approved by the general meeting shall lapse five years after the day on which such claim becomes due and payable. The claim for payment

of interim dividends shall lapse five years after the day on which the claim for payment of the dividend against which the interim dividend could be distributed becomes due and payable.

3.4.4 Taxation

The statements below represent a broad analysis of the current Netherlands tax laws. The description is limited to the material tax implications for a holder of the Company's shares (the "Shares") who is not, or is not treated as, a resident of the Netherlands for Netherlands tax purposes (a "Non-Resident Holder"). Certain categories of holders of the Company's shares may be subject to special rules which are not addressed below and which may be substantially different from the general rules described below. Investors who are in doubt as to their tax position in the Netherlands and in their state of residence should consult their professional advisors.

WITHHOLDING TAX ON DIVIDENDS

In general, a dividend distributed by the Company in respect of Shares will be subject to a withholding tax imposed by the Netherlands at a statutory rate of 15%. Dividends include dividends in cash or in kind, deemed and constructive dividends, repayment of paid-in capital not recognised as capital for Netherlands dividend withholding tax purposes, and liquidation proceeds in excess of the average paid-in capital recognised as capital for Netherlands dividend withholding tax purposes. Stock dividends paid out of the Company's paid-in-share premium, recognised as capital for Netherlands dividend withholding tax purposes, will not be subject to this withholding tax.

A Non-Resident Holder of Shares can be eligible for a partial or complete exemption or refund of all or a portion of the above withholding tax under a tax convention that is in effect between the Netherlands and the Non-Resident Holder's country of residence. The Netherlands has concluded such conventions with the US, Canada, Switzerland, Japan, almost all European Union member states and other countries.

WITHHOLDING TAX ON SALE OR OTHER DISPOSITIONS OF SHARES

Payments on the sale or other dispositions of Shares will not be subject to Netherlands withholding tax, unless the sale or other disposition is, or is deemed to be, made to the Company or a direct or indirect subsidiary of the Company. A redemption or sale to the Company or a direct or indirect subsidiary of the Company will be treated as a dividend and will in principle be subject to the rules set forth in "Withholding Tax on Dividends" above.

TAXES ON INCOME AND CAPITAL GAINS

A Non-Resident Holder who receives dividends distributed by the Company on Shares or who realises a gain from the sale or disposition of Shares, will not be subject to Netherlands taxation on income or capital gains unless:

- such income or gain is attributable to an enterprise or part thereof which is either effectively managed in the Netherlands or carried on through a permanent establishment ("*vaste inrichting*") or permanent representative ("*vaste vertegenwoordiger*") in the Netherlands;
- the Non-Resident Holder is not an individual and the Non-Resident Holder has, directly or indirectly, a substantial interest ("*aanmerkelijk belang*") or a deemed substantial interest in the Company and such interest does not form part of the assets of an enterprise; or
- the Non-Resident Holder is an individual and (i) the Non-Resident Holder has, directly or indirectly, a substantial interest ("*aanmerkelijk belang*") or a deemed substantial interest in the Company and such interest does not form part of the assets of an enterprise, or (ii) such income or gain qualifies as income from miscellaneous activities ("*belastbaar resultaat uit overige werkzaamheden*") in the Netherlands as defined in the Dutch Income Tax Act 2001 ("*Wet inkomstenbelasting 2001*").

Generally, a Non-Resident Holder of Shares will not have a substantial interest in the Company's share capital, unless the Non-Resident Holder, alone or together with certain related persons holds, jointly or severally and directly or indirectly, Shares in the Company, or a right to acquire Shares in the Company representing 5% or more of the Company's total issued and outstanding share capital or any class thereof. A deemed substantial interest exists if all or part of a substantial interest has been or is deemed to have been disposed of with application of a roll-over relief.

GIFT OR INHERITANCE TAXES

Netherlands gift or inheritance taxes will not be levied on the transfer of Shares by way of gift, or upon the death of a Non-Resident Holder, unless:

- the transfer is made by or on behalf of a person who, at the time of the gift or death, is or is deemed to be resident in the Netherlands; or
- the Shares are attributable to an enterprise or part thereof that is either effectively managed in the Netherlands or carried on through a permanent establishment or a permanent representative in the Netherlands.

VALUE-ADDED TAX

No Netherlands value-added tax is imposed on dividends on the Shares or on the transfer of the Shares.

OTHER TAXES AND DUTIES

There is no Dutch registration tax, transfer tax, capital tax, stamp duty or any other similar tax or duty other than court fees payable in the Netherlands in respect of or in connection with the execution, delivery and/or enforcement by legal proceedings (including any foreign judgment in the courts of the Netherlands) with respect to the dividends relating to the Shares or on the transfer of the Shares.

RESIDENCE

A Non-Resident Holder will not become resident, or be deemed to be resident, in the Netherlands solely as a result of holding a Share or of the execution, performance, delivery and/or enforcement of rights in respect of the Shares.

3.5 Annual Securities Disclosure Report

The list of the following announcements comprises the disclosures made pursuant to Section 5:25f of the WFT and constitutes the annual securities disclosure report in application of Article 10 of Directive 2003/71/EC. The announcements and underlying information are on display and may be inspected during the life of this Registration Document on www.eads.com:

Press release – First Quarter 2009 Results	12 May 2009
Press release – First Half 2009 Results	28 July 2009
Press release – Third Quarter 2009 Results	16 November 2009
Press release – A400M--Additional Provision to be Booked	5 March 2010
Press release – 2009 Annual Results	9 March 2010

In addition, EADS publishes announcements made in the ordinary course of business which are also available on www.eads.com.

4.3.3	Long-Term Incentive Plans	164

In accordance with Dutch law and with the provisions of the Dutch Corporate Governance Code as amended at the end of 2008 (the “**Dutch Code**”), which includes a number of non-mandatory recommendations, the Company either applies the provisions of the Dutch Code or, if applicable, explains and gives sound reasons for their non-application. While EADS, in its continuous efforts to adhere to the highest standards, applies most of the current recommendations of the Dutch Code, it must, in accordance with the “apply or explain” principle, provide the explanations below.

For the full text of the Dutch Code, please refer to www.commissiecorporategovernance.nl.

1. **EADS IS A CONTROLLED COMPANY AND, THEREFORE, A NUMBER OF THE MEMBERS OF THE BOARD OF DIRECTORS, AUDIT COMMITTEE, REMUNERATION AND NOMINATION COMMITTEE AND STRATEGIC COMMITTEE ARE DESIGNATED AND CAN BE REMOVED BY ITS CONTROLLING SHAREHOLDERS**

Nevertheless, it should be noted that a self-assessment of the Board of Directors confirmed that the members of the Board of Directors designated by the controlling shareholders hold opinions and defend positions that are in all relevant aspects aligned with the economic interests of individual shareholders. Given the absence of material conflicting business interests between EADS and its controlling shareholders, and the independence of the controlling shareholders from one another, the members of the Board of Directors designated by the controlling shareholders are deemed to fairly represent the interest of all shareholders in acting critically and independently of one another and of any particular interests. Furthermore, the Board of Directors’ composition, as reshaped in October 2007 to increase in particular the number of independent Board members, with a wide range of different experiences represented in the Board of Directors and the running of meetings is conducive to the expression of autonomous and complementary views.

Accordingly:

- (a) four members of the Board of Directors out of eleven are independent (whereas provision III.2.1 of the Dutch Code recommends that there be no more than one non-independent Board member);
- (b) members of the Board of Directors retire simultaneously on a five-year basis (whereas provision III.3.6 of the Dutch Code recommends that there be a retirement schedule to avoid, as far as possible, a situation in which many non-executive members of the Board of Directors retire at the same time);

- (c) the Board of Directors is headed by the Chairman of the Board of Directors. In case of dismissal or resignation of the Chairman, the Board shall immediately designate a new Chairman. There is therefore no need for a vice-Chairman to deal with the situation when vacancies occur (whereas provision III.4.1(f) of the Dutch Code recommends that there be a vice-Chairman);
- (d) EADS’ Audit Committee does not meet without the Chief Executive Officer being present (whereas provision III.5.9 of the Dutch Code recommends this);
- (e) EADS’ Audit Committee includes two members of the Board of Directors designated by the controlling shareholders (whereas provision III.5.1 of the Dutch Code recommends that there be no more than one non-independent Audit Committee member);
- (f) EADS’ Remuneration and Nomination Committee includes two members of the Board of Directors designated by the controlling shareholders (whereas provision III.5.1 of the Dutch Code recommends that there be no more than one non-independent Committee member);
- (g) EADS’ Remuneration and Nomination Committee is not the relevant body responsible for the selection procedure and nomination proposals for members of the Board of Directors (whereas provision III.5.14 (a) of the Dutch Code recommends that such Committee focus on drawing up selection criteria and the appointment procedures for members of the Board of Directors; and provision III.5.14 (d) recommends that such Committee focus on making proposals for appointments and reappointments).

2. **AS FOR REMUNERATION OF MEMBERS OF THE BOARD OF DIRECTORS**

EADS applies different rules for the remuneration of Executive (the Chief Executive Officer) and non-executive members of the Board of Directors, as explained in “— 4.2.1.2 Compensation of the members of the Board of Directors”.

In case of dismissal from the Company of the Chief Executive Officer, a termination indemnity equal to one and a half time the annual total target salary would be paid subject to the following conditions (whereas provision II.2.8 of the Dutch Code recommends that the maximum remuneration in the event of dismissal be one year’s salary (the “fixed” remuneration component), and that if the maximum of one year’s salary would be manifestly unreasonable for an Executive Board member who is dismissed during his first term of office, such board member be eligible for severance pay not exceeding twice the annual salary): the Board of Directors has concluded that the Chief

1

2

3

4

5

Back to Contents

Executive Officer can no longer fulfil his position as a result of change of EADS' strategy or policies or as a result of a change in control of EADS. The termination indemnity would only be paid provided that the performance conditions assessed by the Board of Directors had been fulfilled by the Chief Executive Officer.

However, this termination indemnity is no longer applicable, since the Chief Executive Officer has reached the age of 65.

3. EADS IS LISTED ON THE FRANKFURT, PARIS AND SPANISH STOCK EXCHANGES AND ENDEAVOURS TO STRICTLY COMPLY WITH THE RELEVANT REGULATIONS AND TAKE INTO ACCOUNT THE GENERAL PRINCIPLES ON THESE MARKETS PROTECTING ALL OF ITS STAKEHOLDERS

- (a) Moreover, EADS has adopted Insider Trading Rules providing for specific internal rules, *inter alia*, governing members' of the Board of Directors holding and trading of shares in EADS and other companies. Therefore, in line with these rules and these regulations and common practices in the jurisdictions in which the Company is listed:
- (b) EADS does not require members of the Board of Directors to hold their securities in the Company as a long-term investment (whereas provision III.7.2 of the Dutch Code recommends such a treatment);
- (c) The term of the office of members of the Board of Directors is five years without limitation on renewal (whereas provisions II.1.1 and III.3.5 of the Dutch Code recommend that there be no more than three four-year terms for non-executive members of the Board of Directors and that there be four-year terms (without limitation on renewal) for Executive members of the Board of Directors);
- (d) EADS does not follow various recommendations for dealings with analysts, including allowing shareholders to follow meetings with analysts in real time and publishing presentations to analysts on the website as set out in provision IV.3.1 of the Dutch Code;

- (e) In accordance with EADS' Articles of Association, if the Board of Directors does not set a "registration date", the shareholders must be shareholders at the date of the meeting to exercise their voting rights and other rights at the meeting (whereas provision IV.1.7 of the Dutch Code recommends that the Company set a "registration date" prior to the shareholder's meeting and that the shareholders must be shareholders on the date of such "registration date" to exercise their voting rights at the shareholders' meetings even if those persons are no longer shareholders on the date of such meeting).

4. ETHICS ALERT SYSTEM

EADS is finalising the implementation of an alert system procedure for employees to raise, in strict confidentiality, concerns relating to business ethics, compliance and financial reporting. The Board of Directors and the Audit Committee have decided to implement such an alert system procedure as part of the EADS Ethics and Compliance Programme, which falls under the authority of the EADS Group Chief Compliance Officer ("CCO").

Accordingly, EADS intends to comply by the end of 2010 with provision II.1.7 of the Dutch Code, which recommends that a company ensure that its employees have the possibility of reporting alleged irregularities of a general, operational and financial nature in the company or concerning the functioning of the Executive member of the Board of Directors to the Chairman of the Board of Directors or to an official designated by him, and that such arrangements for whistleblowers be posted on the Company's website.

4.1 Management and Control

Since its creation in 2000 and until 22 October 2007, EADS was led by a dual-headed management structure, with two Chairmen and two co-Chief Executive Officers, which provided the necessary balance and stability required for a company with such a unique industrial and multi-national heritage.

On 16 July 2007, Daimler (formerly DaimlerChrysler), the French Government and Lagardère decided, together with the EADS management team, to implement a new management and leadership structure. The German Government was also consulted. Guiding principles of this modification were efficiency, cohesiveness and simplification of EADS' management and leadership structure, towards corporate governance best practices while maintaining a balance between the French and the German core shareholders. Under the simplified management structure, EADS is now led by a single Chairman and a single Chief Executive Officer.

The core shareholders also concluded that it was in the best interest of the Group to recommend an increase in the

number of independent members on the Board of Directors to appropriately reflect the global profile of EADS by conforming to international corporate governance best practices.

In this respect, both Daimler and Sogade relinquished two seats on the Board of Directors and four independent Directors were elected during the Extraordinary General Meeting of Shareholders held on 22 October 2007. Apart from the Chief Executive Officer, the Board of Directors no longer comprises executive directors.

The core shareholders have also decided to amend the responsibilities assumed by the Board of Directors, the Chairman, the Chief Executive Officer and the Executive Committee, as described below. These modifications were fully implemented and became effective from the Extraordinary General Meeting of Shareholders and Board of Directors' meeting both held on 22 October 2007.

4.1.1 Board of Directors, Chairman and Chief Executive Officer

4.1.1.1 COMPOSITION, POWERS AND RULES

Pursuant to the Articles of Association, the Board of Directors is responsible for the management of the Company.

The Board of Directors consists of a maximum of eleven members appointed and removed by the shareholders' meeting. The Board of Directors adopted rules governing its internal affairs (the "Rules") at a Board of Directors' meeting held on 7 July 2000. The Rules were amended at a Board of Directors' meeting held on 5 December 2003 to take into account recommendations for changes to corporate governance. These Rules were further amended at a Board of Directors' meeting held on 22 October 2007, to take into account the corporate governance modifications approved during the Extraordinary General Meeting of Shareholders held the same day.

The Rules specify the composition, the role and the key responsibilities of the Board of Directors, and also determine the manner of appointment and the responsibilities of the Chairman and the Chief Executive Officer. The Rules also specify the creation of three committees (the Audit Committee, the Remuneration and Nomination Committee and the Strategic Committee) and specify their composition, role and operating rules.

The Board of Directors has also adopted specific Insider Trading Rules, which restrict its members from trading in EADS shares in certain circumstances (for more information, please see "General Description of the Company and its Share Capital — 3.1.3 Governing Laws and Disclosures").

The parties to the Participation Agreement (as amended on 22 October 2007 and as defined in the opening paragraph of "General Description of the Company and its Share Capital — 3.3.2 Relationships with Principal Shareholders") have agreed that the voting rights attached to the Indirect EADS Shares shall be exercised by EADS Participations B.V. to ensure that the Board of Directors of EADS comprises the directors of EADS Participations B.V. and four additional independent directors.

According to the Rules, an independent director is defined as "a director who is not an officer, director, employee, agent or otherwise has any significant commercial or professional connection with either the DASA Group, the Lagardère Group, the Sogepa Group, the SEPI Group, the French State, the German State, the Spanish State or the EADS Group".

1

2

3

4

5

Back to Contents

Pursuant to the Participation Agreement, the Board of Directors comprises eleven members as follows (the “**Board of Directors**”, the members of the Board of Directors being referred to as the “**Directors**”):

- one non-executive Chairman, appointed on joint proposal by the Daimler-Directors and the Sogea-De-Directors;
- the Chief Executive Officer of EADS, appointed on joint proposal by the Daimler-Directors and the Sogea-De-Directors;
- two Directors nominated by Daimler;
- two Directors nominated by Sogea-De;
- one Director nominated by SEPI, so long as the Indirect EADS Shares held by SEPI represent 5% or more of the total number of EADS Shares but in any case until the annual shareholders’ meeting of EADS to be held in 2012; and
- four independent Directors, jointly proposed by the Chairman and the Chief Executive Officer of EADS and individually approved by the Board.

Pursuant to the Articles of Association, each member of the Board of Directors holds office for a term that expires at the annual shareholders’ meeting of EADS to be held in 2012. Members of the Board of Directors will be elected at each fifth annual shareholders’ meeting thereafter.

The shareholders’ meeting may at all times suspend or dismiss any member of the Board of Directors. There is no limitation on the number of terms that a Director may serve.

The Board of Directors appoints a Chairman, upon the joint proposal of the Daimler-Directors and the Sogea-De-Directors. The Chairman ensures the smooth functioning of the Board of Directors in particular with respect to its relations with the Chief Executive Officer with whom he teams up for top level strategic discussions with outside partners, which are conducted under his supervision.

The Chairman shall have either French or German nationality, provided that the Chief Executive Officer is of the other nationality.

The Chairman can submit his resignation as Chairman to the Board of Directors or can be dismissed as Chairman by the Board of Directors, upon the joint proposal of the Daimler-Directors and the Sogea-De-Directors. The appointment further terminates if the Chairman is dismissed or resigns as Director. Immediately following the dismissal or resignation of the Chairman, and if the Daimler-Directors and the Sogea-De-Directors do not immediately jointly designate a new Chairman, the Board of Directors appoints by simple majority a Director (with the same

citizenship as the former Chairman) as interim Chairman for a period which expires at the earlier of either (i) twenty clear days after the Daimler-Directors and the Sogea-De-Directors jointly designate a new Chairman (during which period, a Board of Directors meeting is called in order to appoint the new Chairman, upon the joint proposal of the Daimler-Directors and the Sogea-De-Directors), or (ii) two months from that interim Chairman’s appointment.

Upon request by any member of the Board of Directors made three years after the beginning of the Chairman’s term and alleging that significant adverse deviation(s) from objectives and/or failure(s) to implement the strategy defined by the Board of Directors occurred, the Board of Directors shall meet, to decide whether deviations and/or failures actually occurred during this period and if so, to decide whether to renew its confidence in the Chairman (the “**Vote of Confidence**”). The Board of Directors resolves upon such Vote of Confidence by simple majority. The Chairman is removed if he does not obtain such Vote of Confidence, a new Chairman being then appointed in accordance with the above.

Upon the joint proposal by the Daimler-Directors and the Sogea-De-Directors, the Board of Directors has appointed a Chief Executive Officer to be responsible for the day-to-day management of the Company. The way the Chief Executive Officer can resign or be dismissed and the way the Chief Executive Officer would, if any, be replaced are identical to those applying to the Chairman. The Vote of Confidence procedure stated above is also applicable to the Chief Executive Officer under the same conditions as for the Chairman.

Powers of the Board of Directors

The Company is represented by the Board of Directors or by the Chief Executive Officer. The Chief Executive Officer may not enter into transactions that form part of the key responsibilities of the Board of Directors unless these transactions have been approved by the Board of Directors.

The key responsibilities of the Board of Directors include amongst others:

- approving any change in the nature and scope of the business of the Group;
- approving any proposal to be submitted to the general meeting of shareholders in order to amend the Articles of Association of EADS (Qualified Majority, as defined below);
- approving the overall strategy and the strategic plan of the Group;
- approving substantial changes to the business plan and the yearly budget of the Group;

- setting the major performance targets of the Group;
- designating or removing the Chairman and the Chief Executive Officer and deciding upon the designation or removal of the Chief Executive Officer of Airbus (Qualified Majority);
- appointing the members of the Executive Committee (see below), as a whole team, not on an individual basis;
- establishing and approving amendments to the Rules and to the rules for the Executive Committee (Qualified Majority);
- deciding upon the appointments of the Airbus Shareholder Committee, the EADS Corporate Secretary and the chairmen of the Supervisory Board (or similar organ) of other important Group companies and business units;
- approving material changes to the organisational structure of the Group;
- approving investments, projects or product decisions or divestments of the Group with a value exceeding € 350,000,000 (it being understood that this item shall require the Qualified Majority only for investments, projects or product decisions or divestments of the EADS Group with a value exceeding € 500,000,000);
- approving strategic alliances and co-operation agreements of the Group (Qualified Majority);
- approving matters of shareholder policy, major actions or major announcements to the capital markets;
- approving any material decision regarding the ballistic missiles business of the Group (Qualified Majority);
- approving other measures and business of fundamental significance for the Group or which involve an abnormal level of risk;
- approving any proposal by the Chairman and the Chief Executive Officer as to the appointment of the independent Directors, for submission to the general meeting of shareholders; and
- approving of principles and guidelines governing the conduct of the Group in matters involving non-contractual liabilities (like environmental matters, quality assurance, financial announcement, integrity) as well as the corporate identity of the Group.

Voting and rules

Each Director has one vote, provided that, if there are more Sogeadé-nominated Directors than Daimler-nominated Directors present or represented at the meeting, the Daimler-nominated Director who is present at the meeting can exercise the same number of votes as the Sogeadé-nominated Directors who are present or represented at the meeting, and vice versa. All decisions of the Board of Directors are taken by a simple majority of votes (six Directors, present or represented, voting in favour of the decision), except for the votes relating to certain matters which can only be validly resolved upon a majority of votes including the unanimous vote of the two Sogeadé-nominated Directors and the two Daimler nominated Directors (the “**Qualified Majority**”). The quorum for the transaction of business at meetings of the Board of Directors requires the presence of at least one of the Sogeadé-nominated Directors and one of the Daimler-nominated Directors. A Director can authorise another Director to represent him or her at a Board meeting and to vote on his or her behalf. Such authorisation must be in writing.

In the event of a deadlock in the Board of Directors, other than a deadlock giving Daimler the right to exercise the put option granted to it by Sogeadé (see “General Description of the Company and its Share Capital — 3.3.2 Relationships with Principal Shareholders — Put Option”), the matter shall be referred to Arnaud Lagardère (or such person as shall be nominated by Lagardère) as representative of Sogeadé and to the Chief Executive Officer of Daimler. In the event that the matter in question, including a deadlock giving Daimler the right to exercise the put option (but in this case with the agreement of Sogepa and Daimler) is a matter within the competence of the general meeting of EADS, a resolution on the issue shall be put to the general meeting, with the voting rights of Sogeadé, Daimler and SEPI being negated.

Pursuant to the Rules, the Board of Directors may form committees from its members. In addition to the Audit Committee, the Remuneration and Nomination Committee and the Strategic Committee, the Board of Directors may form other committees to which it may transfer certain minor or ancillary decision-making functions although such assignment does not negate the joint responsibility of all Directors. The quorum for the transaction of business at any meeting of a committee requires the presence of at least one of the Sogeadé-nominated Directors and one of the Daimler-nominated Directors. All decisions of a committee require the simple majority of the members.

In addition to the Rules, the work of the Board of Directors is governed by internal directors’ guidelines (the “**Directors’ Guidelines**”) adopted in light of corporate governance best practices. The Directors’ Guidelines are composed of a directors’ charter (the “**Directors’ Charter**”) detailing the rights and duties of the members of the Board of Directors, an Audit

Committee charter (the “**Audit Committee Charter**”), a Remuneration and Nomination Committee charter (the “**Remuneration and Nomination Charter**”) and a Strategic Committee charter (the “**Strategic Committee Charter**”), with each such charter setting forth the respective committees’ roles.

The Directors’ Charter sets out core principles that bind each and every Director, such as acting in the best interest of the Company and its stakeholders, devoting necessary time and attention to the carrying out of their duties and avoiding any and all conflicts of interest.

Composition of the Board of Directors

Name	Age	Term started (as member of the Board of Directors)	Term expires	Principal function	Status
Bodo Uebber	50	2007	2012	Chairman of EADS	Non-Executive
Louis Gallois	66	2000, re-elected in 2005 and 2007	2012	Chief Executive Officer of EADS	Executive
Rolf Bartke	63	2007	2012	Chairman of Keiper-Recaro-Group	Nominated by Daimler
Dominique D'Hinnin	50	2007	2012	Co-Managing Partner of Lagardère	Nominated by Sogea

Arnaud Lagardère	49	2003, re-elected in 2005 and 2007	2012	General Partner and CEO of Lagardère	Nominated by Sogea
Hermann-Josef Lamberti	54	2007	2012	Member of the Management Board of Deutsche Bank AG	Independent
Lakshmi N. Mittal	59	2007	2012	President and Chief Executive Officer of ArcelorMittal	Independent
Sir John Parker	67	2007	2012	Chairman of National Grid	Independent
Michel Pébereau	68	2007	2012	Chairman of BNP Paribas	Independent
Wilfried Porth	51	2009	2012	Member of Board of Management of Daimler AG	Nominated by Daimler

Note: The professional address of all members of the Board of Directors for any matter relating to EADS is Mendelweg 30, 2333 CS Leiden, The Netherlands.

Within EADS, each Director must have the required mix of experience, qualifications, skills and industrial knowledge necessary to assist the Company in formulating and achieving its overall strategy, together with the specific expertise required to fulfil the duties assigned to him or her as member of one of the Board’s committees. The Board of Directors recognises that having a diverse composition among its members with respect to gender, experience, national origin, etc. is valuable for the quality and efficiency of its work.

The Board of Directors will propose candidates who can, in combination with the other Directors, manage EADS in a way that strengthens its position as a leader in the aerospace and defence industry. In this regard, the Board of Directors will take diversity—in particular with respect to gender—into account when assessing and proposing candidates for the upcoming renewal of the entire Board of Directors in 2012.

The Company has not appointed observers to the Board of Directors. Pursuant to applicable Dutch law, the employees are not entitled to elect a Director. There is no minimum number of shares that must be held by a Director.

CURRICULUM VITAE AND OTHER MANDATES AND DUTIES PERFORMED IN ANY COMPANY BY THE MEMBERS OF THE BOARD OF DIRECTORS

Bodo Uebber

Mr Bodo Uebber was appointed Chairman of EADS in April 2009. He has been a member of the Board of Management of Daimler AG since 16 December 2003 and is responsible for finance and controlling and the Daimler Financial Services Division (since 16 December 2004), and for mergers and acquisitions (since April 2009). He previously held various leadership positions in finance within Dornier Luftfahrt GmbH, DASA AG and MTU Aero Engines GmbH. Mr Uebber was born on 18 August 1959 in Solingen. He graduated in 1985 with a degree in engineering and economics at the Technical University of Karlsruhe. In the same year, he joined Messerschmitt-Bölkow-Blohm GmbH (MBB).

Current mandates in addition to the one listed in the chart above are set forth below:

- Member of the Board of Management of Daimler AG;
- Chairman of the Board of Directors of EADS Participations B.V.;
- Chairman of the Supervisory Board of Daimler Financial Services AG;

- Member of the Supervisory Board of Mercedes-Benz Bank AG;

Sir John Parker

Sir John Parker is Chairman of National Grid PLC and Anglo American PLC, Deputy Chairman of DP World (Dubai), Non-Executive Director of Carnival PLC and Carnival Corporation, a member of the International Advisory Board of Citigroup and Chancellor of the University of Southampton. His career has spanned the engineering, shipbuilding and defence industries, including some 25 years' experience as a Chief Executive Officer with Harland & Wolff and the Babcock International Group. He studied Naval Architecture and Mechanical Engineering at the College of Technology, Queens University, Belfast.

Current mandates in addition to the one listed in the chart above are set forth below:

- > Director of Carnival plc and Carnival Corporation;
- > Deputy Chairman of D.P. World (Dubai);
- > Member of the International Advisory Board of Citigroup;
- > Chancellor of the University of Southampton;
- > Director of White Ensign Association Limited;
- > Member of the Prime Ministers Business Council for Britain; and
- > Member of the Board of Directors of Stichting Administratiekantoor EADS.

Former mandates for the last five years:

- > Senior non-executive Director of Bank of England (resigned June 2009); and
- > Joint Chairman Mondi Group (resigned August 2009).

Michel Pébereau

Mr Michel Pébereau has been BNP Paribas' Chairman of the Board since 2003. He presided over the merger that created BNP Paribas in 2000, becoming Chairman and Chief Executive Officer (CEO). In 1993, he was appointed Chairman and CEO of the *Banque Nationale de Paris* and privatised it. Previously, he was Chairman and CEO of the *Crédit Commercial de France*. He started his career in 1967 at the *Inspection Générale des Finances*. In 1970 he joined the French Treasury where he held various high ranking posts. Mr Pébereau is an alumnus of the *École Nationale d'Administration* and of the *École Polytechnique*.

Current mandates in addition to the one listed in the chart above are set forth below:

- > Member of the Board of Directors of Lafarge;
- > Member of the Board of Directors of Saint-Gobain;
- > Member of the Board of Directors of Total;
- > Member of the Board of Directors of Pargesa Holding S.A., Switzerland;
- > Member of the Board of Directors of BNP Paribas (Suisse) S.A.;
- > Member of the Supervisory Board of Axa;

> Member of the Supervisory Board of *Banque Marocaine pour le Commerce et l'Industrie*, Morocco;

- > Censor of Galeries Lafayette S.A.;
- > Chairman of the European Financial Round Table;
- > Chairman of the European Banking Federation;
- > Chairman of the Investment Banking and Financial Markets Committee of *Fédération Bancaire Française*;
- > Chairman of the Management Board of *Institut d'Études Politiques de Paris*;
- > Chairman of the Supervisory Board of Institut Aspen France;
- > Chairman of the *Institut de l'Entreprise*;
- > Member of the Executive Committee of *Mouvement des Entreprises en France*;
- > Member of the *Haut Conseil de l'Éducation*;
- > Member of the *Institut International d'Études Bancaires*;
- > Member of the International Advisory Panel of Monetary Authority of Singapore;
- > Member of the International Capital Markets Advisory Committee of Federal Bank of New York;
- > Member of the International Business Leaders' Advisory Council for the Mayor of Shanghai (IBLAC);
- > Member of the European Financial Round Table; and
- > Member of the "Académie des sciences morales et politiques".

Former mandates for the last five years:

- > Member of the Board of Directors of EADS Participations B.V. (resigned 22 October 2007).

Wilfried Porth

Mr Wilfried Porth is a member of the Board of Management of Daimler AG and the Director of Labor Relations, responsible for Human Resources, IT-management and Procurement of Non-Production Material and Services. Until 2006, he was Executive Vice President, MB Van and prior to that, he was Chief Executive Officer of Mitsubishi Fuso Truck & Bus Corp. He previously held various engineering management positions within the Daimler Group, including several years of experience abroad. Mr Porth graduated in engineering at the University of Stuttgart.

Current mandates in addition to the one listed in the chart above are set forth below:

- Member of the Supervisory Board of Daimler Financial Services AG;
- Member of the Board of Directors of EADS Participations B.V.; and
- Member of the Advisory Board of Daimler Unterstützungskasse GmbH.

Former mandates for the last five years:

- Member of the Board of Directors of Mitsubishi Fuso Truck and Bus Corporation (resigned June 2005);
- Member of the Advisory Board of Westfalia Van Conversion GmbH (resigned November 2007);
- Member of the Supervisory Board of Mercedes-Benz Ludwigsfelde GmbH (resigned March 2009);
- Member of the Advisory Board of Mercedes-Benz España, S.A. (resigned June 2009);
- Member of the Board of Directors of Daimler Vans Manufacturing, LLC (resigned August 2009); and
- Officer of Daimler Vans Manufacturing, LLC (resigned August 2009).

Independent Directors

The four independent Directors appointed pursuant to the criteria of independence set out above are Hermann-Josef Lamberti, Lakshmi N. Mittal, Sir John Parker and Michel Pébereau.

Prior Offences and Family Ties

To the Company's knowledge, none of the Directors (in either their individual capacity or as director or senior manager of any of the entities listed above) has been convicted in relation to fraudulent offences, been the subject of any bankruptcy, receivership or liquidation, nor been the subject of any official public incrimination and/or sanction by a statutory or regulatory authority, nor been disqualified by a court from acting as a member of the administrative, management or supervisory bodies of any issuer or conduct of affairs of any company, during at least the last five years. As of the date of this document, there are no family ties among any of the Directors.

4.1.1.2 OPERATION OF THE BOARD OF DIRECTORS IN 2009

Board of Directors meetings

The Board of Directors met eleven times during 2009 and was regularly informed of developments through business reports from the Chief Executive Officer, including rolling forecasts as well as strategic and operational plans. The average attendance rate at such meetings was 84%.

On 14 April 2009, Rüdiger Grube resigned from the chairmanship of the Board of Directors, and the Board of Directors designated Bodo Uebber as his successor in this position. Rüdiger Grube also resigned as a member of the Board of Directors, and for the remaining term of his appointment (*i.e.* until the annual shareholders' meeting to be held in 2012) the Board of Directors proposed as his replacement Mr Wilfried Porth, who was elected by the annual shareholders' meeting held on 27 May 2009. In addition, on 2 February 2009, the Board of Directors appointed Domingo Ureña-Raso as member of the Executive Committee and new Head of Airbus Military, and in November 2009, Sean O'Keefe as new Head of EADS North America. The latter became a member of the Executive Committee on 1 January 2010. The Board of Directors also approved the contract renewals of other Executive Committee members.

Overall, in 2009, seven Board of Directors meetings covered A400M related matters. Other topics intensively discussed, and operations authorised at the Board of Directors meetings included: EADS' strategy (including M&A matters and the competitive environment), major business issues such as the A350 development and the Saudi border surveillance programme, regular updates on the other major programmes, progress of Vision 2020, the approval of the operational plan, the Group's financial results and forecasts. In times of economic crisis, the Board of Directors focused on Enterprise Risk Management, the Corporate Audit Plan and on progress of the Compliance Organisation, created in 2008. Ongoing legal cases and litigations were discussed as well. The Board of Directors also dealt with topics regarding personnel and Human Resources, such as compensation policy, management qualification, remuneration (including the long-term incentive plan and an employee share ownership plan) as well as attracting, retaining and developing individuals with high potential in order to ensure the future quality of EADS' management and the multinational leadership structure. Moreover, the Board tasked management to increase its efforts regarding diversity amongst its employees.

Assessment of the Performance of the Board of Directors

The Board of Directors carries out a self-assessment of its performance on an annual basis and a more thorough assessment every three years conducted by independent consultants. Due to the reconfiguration of the Board of Directors in October 2007, the Board selected Egon Zehnder International for a board effectiveness review in 2010.

The Board review was conducted by Egon Zehnder International in February 2010. The discussion of the result was planned for subsequent Board of Directors' meetings in March and June 2010. The evaluation explored the role of the Board of Directors, the correlation of its operations with its mission, and the instruments and processes that affect its performance.

The assessment concluded that the Board of Directors is generally satisfied with its ability to work as a team and to tackle relevant matters openly in the best interest of the Company. While there is room for improvement, there is no need to alter the setup after 28 months of operation.

The Directors consider the frequency and the length of the Board meetings adequate and feel that issues are covered thoroughly. Supporting documentation contains all necessary information but needs to be better focused in support of decision-making. The comprehensiveness of information arises from the complexity of the business, and the proportion of information delivery relative to discussion reflects this fact.

With regards to the Board of Directors' teamwork, attendance is adequate and the unanimous opinion is that conflicting views are expressed, discussions are open and dissent can be voiced constructively. Overall, the Board of Directors considers that it assembles a very international, diverse and relevant set of skills, with strong finance competencies; in 2009, these skills were applied to discussing key programmes, the A400M contract re-negotiation, the risks inherent to the economic crisis and

their impact on commerce operations and profitability. A closer working relationship between the Board of Directors and the Executive Committee was deemed conducive to better efficiency.

In addition, the Directors feel that the Board-work allows them to fulfil their duty, and attention to compliance permeates the work of the Board of Directors. But they sense that the Board of Directors is still absorbed in operational matters – especially A400M – at the expense of the longer term questions. Therefore, the majority of Board members require more time devoted to long lead questions, such as shared values and strategy, structure and efficiency. Steps in that direction were taken, however, and for the first time, the Board of Directors devoted a full day meeting to strategy in 2009, including an assessment of Vision 2020 goals in a changing environment. This practice will be continued.

Committees are very thorough and professional, and the articulation of the Audit Committee and of the Remuneration and Nomination Committee with the rest of the Board of Directors is satisfactory; however, Committee work should increasingly be held on dates separate from the Board of Directors' meeting, and results of the Committee work should be more intensively discussed by the whole Board.

Finally, the Chairmanships of the Board and the Committees are recognised as very competent and dedicated.

Since the last self-assessment, in 2009, the dedication of a specific Board of Directors' meeting to strategic matters, the diversity of the skill set and experience in the Board room, and the focus on the agenda are the most tangible improvements. The Board Secretary has taken measures so that Board of Directors' documentation be better suited to support decisions in 2010.

Continuous improvement, competitiveness and effectiveness of governance and management of the Group will remain a prime focus and key success factor of EADS.

4.1.2 Audit Committee

Pursuant to the Rules, the Audit Committee makes recommendations to the Board of Directors on the appointment of Auditors and the determination of their remuneration, as well as the approval of the annual financial statements and the interim accounts, it discusses with the Auditors their audit programme and the results of their audit of the accounts and it monitors the adequacy of the Group's internal controls, accounting policies and financial reporting. The Audit Committee has responsibility for ensuring that the internal and external audit activities are correctly directed and that audit

matters are given due importance at meetings of the Board of Directors. The rules and responsibilities of the Audit Committee have been set out in the Audit Committee Charter.

The Audit Committee reviews the quarterly, half and full year accounts on the basis of the documents distributed in advance and its discussions with the Auditors. It also surveys the Group's Enterprise Risk Management (ERM) and the Compliance Organisation.

1

2

3

4

5

[Back to Contents](#)

In 2009, the Audit Committee:

- was chaired by Hermann-Josef Lamberti, and also included Dominique D'Hinnin, Sir John Parker and Bodo Uebber as members until 14 April 2009; and
- has since then been chaired by Hermann-Josef Lamberti, and also includes Rolf Bartke, Dominique D'Hinnin and Sir John Parker as members.

The Chairman and the Chief Executive Officer are invited as guests to each meeting of the Committee. The Head of

Accounting and the Chief Financial Officer are requested to attend meetings of the Audit Committee to answer questions.

The Audit Committee must meet four times a year, or more frequently depending on need. It met five times during 2009, with a 90% average attendance rate, to review the 2008 results as well as the first half-year results for 2009 of the Company, the quarterly financial reviews, and topics such as ERM, compliance and internal audit matters.

4.1.3 Remuneration and Nomination Committee

Pursuant to the Rules, the Remuneration and Nomination Committee makes recommendations to the Board of Directors regarding the appointment of the EADS Corporate Secretary, the members of the Airbus Shareholder Committee, and the chairmen of the Supervisory Board (or similar organ) of other important Group member companies and business units. The Remuneration and Nomination Committee also makes recommendations to the Board of Directors regarding remuneration strategies and long-term remuneration plans and decides on the service contracts and other contractual matters in relation to the Board of Directors and Executive Committee members. Once approved by the Chairman, it also reviews the proposals by the Chief Executive Officer for the appointment of members of the Executive Committee and of the Airbus Chief Executive Officer. The rules and responsibilities of the Remuneration and Nomination Committee have been set out in the Remuneration and Nomination Charter.

The guiding principle governing management appointments in the Group is that the best candidate should be appointed to the position ("best person for the job"), while at the same time seeking to achieve a diverse composition with respect to gender, experience, national origin, etc.

In 2009, the Remuneration and Nomination Committee:

- was chaired by Sir John Parker, and also included Rolf Bartke, Dominique D'Hinnin and Hermann-Josef Lamberti as members until 27 May 2009; and

- has since then been chaired by Sir John Parker, and also includes Dominique D'Hinnin, Hermann-Josef Lamberti and Wilfried Porth as members.

The Chairman and the Chief Executive Officer are invited as guests to each meeting of the Committee.

The Remuneration and Nomination Committee must meet twice a year, or more frequently depending on need. It met four times during 2009, with a 94% average attendance rate. In addition to making recommendations to the Board of Directors for major appointments within the Group, the Remuneration and Nomination Committee reviewed the compensation policy (including pension schemes), variable pay for 2008, the long-term incentive plan and the employee share ownership plan for 2009/2010, the salaries of Executive Committee members for 2009 and general succession planning.

In early 2010, a thorough benchmark study of the compensation of EADS' Board of Directors and executives was conducted, in order to analyse its appropriateness in terms of structure and amounts. The results showed that the overall remuneration was adequate and compliant with governance recommendations and with industry practice. As an outcome, the Remuneration and Nomination Committee has recommended an enhancement of the overall compensation structure for EADS executives during 2010, so that it better supports company objectives of sustainability and profitability.

4.1.4 Strategic Committee

The Strategic Committee was created in October 2007. It is not a decision making body but a resource available to the Board of Directors for the preparation of decisions on strategic matters. Pursuant to the Rules, the Strategic Committee makes recommendations to the Board of Directors regarding strategic developments, corporate strategies, major merger and acquisition projects, major investments, projects or product decisions or divestments, as well as major research and development projects. The rules and responsibilities of the Strategic Committee have been set out in the Strategic Committee Charter.

In 2009, the Strategic Committee:

- was chaired by Rüdiger Grube, and also included Louis Gallois, Arnaud Lagardère, Michel Pébureau and Bodo Uebber as members until 14 April 2009; and

- has since then been chaired by Bodo Uebber, and also includes Louis Gallois, Arnaud Lagardère, Michel Pébureau and Wilfried Porth (following his appointment as a Director on 27 May 2009) as members.

The Strategic Committee must meet twice a year, or more frequently depending on need. It met twice during 2009 with an 80% average attendance rate. In addition to monitoring major strategic initiatives of the Group, it made recommendations to the Board of Directors on merger and acquisition projects and reviewed EADS' Research & Technology (R&T) policy.

4.1.5 Executive Committee

The Chief Executive Officer, supported by an Executive Committee (the “**Executive Committee**”), is responsible for managing the day-to-day operations of the Company. The Executive Committee, chaired by the Chief Executive Officer, also comprises the Heads of the major Functions and divisions of the Group. The Executive Committee met 12 times during 2009.

The following matters are discussed, amongst others, at the Executive Committee meetings:

- appointment approvals of their management teams by the heads of the Group divisions (with the exception of the Airbus Chief Operating Officer);
- investment approvals up to €350,000,000;
- setting up and control of the implementation of the strategy for EADS businesses;
- management, organisational and legal structure of the Group;
- performance level of the Group's businesses and support functions; and
- all business issues, including the operational plan of the Group and its divisions and Business Units.

The internal organisation of the Executive Committee is defined by the business allocation among the members under the supervision of the Chief Executive Officer. Notwithstanding

the joint responsibilities as defined above, each member of the Executive Committee is individually responsible for the management of his portfolio and must abide by decisions taken by the Chief Executive Officer and the Executive Committee, as the case may be.

The Chief Executive Officer endeavours to reach consensus among the members of the Executive Committee on the matters discussed at the Executive Committee meetings. In the event a consensus is not reached, the Chief Executive Officer is entitled to decide the matter. If there is a fundamental or significant disagreement with respect to any undecided matter, the dissenting Executive Committee member may request that the Chief Executive Officer submit such matter to the Chairman for his opinion.

The term of office for the Executive Committee members is five years.

The Executive Committee members are appointed by the Board of Directors on the proposal of the Chief Executive Officer first approved by the Chairman after review by the Remuneration and Nomination Committee. The appointment of the Executive Committee should be approved as a whole team, not on an individual basis, with the exception of the Chief Executive Officer of Airbus, who shall be appointed by the Board of Directors individually.

COMPOSITION OF THE EXECUTIVE COMMITTEE

Name	Age	Term started	Term expires	Principal Occupation
Louis Gallois	66	2007	2012	Chief Executive Officer EADS
François Auque	53	2005	2010	Head of Astrium and Coordination Space & Defence
Lutz Bertling	47	2006	2011	Head of Eurocopter
Jean J. Botti	53	2006	2011	Chief Technical Officer
Fabrice Brégier	48	2005	2012	EADS Operational Performance
Thomas Enders	51	2007	2012	Head of Airbus
Jussi Itävuori	54	2008	2012	Head of Human Resources
Marwan Lahoud	44	2007	2012	Chief Marketing and Strategy Officer
Sean O'Keefe	54	2010	2014	Head of EADS North America
Hans Peter Ring	59	2007	2012	Chief Financial Officer EADS
Domingo Urena-Raso	51	2009	2014	Head of Airbus Military
Stefan Zoller	52	2005	2010	Head of Defence & Security

Note: The professional address of all members of the Executive Committee for any matter relating to EADS is Mendelweg 30, 2333 CS Leiden, The Netherlands.

Louis Gallois, Chief Executive Officer EADS

See “— 4.1.1 Board of Directors, Chairman and Chief Executive Officer — Curriculum Vitae and other Mandates and Duties Performed in any Company by the members of the Board of Directors”.

François Auque, Head of Astrium and Coordination Space & Defence

Mr Auque was appointed in 2000. He was previously Chief Financial Officer (CFO) of Aerospatiale then Aerospatiale Matra and Managing Director for satellites of Aerospatiale Matra. He spent his earlier career with the Suez Group and the French Cour des Comptes. Mr Auque graduated from *École des Hautes Études Commerciales*, *Institut d'Études Politiques* and is an alumnus of *École Nationale d'Administration*.

Lutz Bertling, Head of Eurocopter

Mr Bertling was appointed in 2006, following a year as CEO of Eurocopter Deutschland. He joined Eurocopter in 2003 as Head of Governmental Programmes, coming from the Defence & Security division. Previously, he held various positions at DaimlerChrysler Rail Systems and Braunschweig University. He earned a PhD in Engineering at the Braunschweig University.

Jean J. Botti, Chief Technical Officer

Mr Botti was appointed in 2006. He joined from General Motors, where he was Chief Technologist and then Business Line Executive of the Delphi Powertrain business. He started his career in 1978 as product engineer for Renault. Mr Botti holds a degree from INSA Toulouse, an MBA from Central Michigan University and a PhD from the Conservatoire des Arts et Métiers and is an SAE fellow.

Fabrice Brégier, EADS Operational Performance

Mr Brégier was appointed Airbus COO in 2006, with additional responsibility for EADS operational performance. He became President and Chief Executive Officer (CEO) of Eurocopter in 2003. Previously, he was CEO of MBDA. He joined Matra Défense in 1993 as Chairman of the Apache MAW and Eurodrone GIEs. He is alumnus of *École Polytechnique* and *École des Mines*.

Thomas Enders, Head of Airbus

Mr Enders was appointed in August 2007. Previously, since 2005, he was co-CEO of EADS. From 2000 to 2005 he was Head of the Defence & Security Division at EADS. Prior to that he had been a Director Corporate Development and Technology at DASA. He joined DASA in 1991. Mr Enders holds a Doctorate degree from the University of Bonn.

Jussi Itävuori, Head of Human Resources

Mr Itävuori joined EADS in 2001 and became a member of the Executive Committee in 2003. Previously, he had worked for KONE Corporation from 1982, being appointed Head of Human Resources and member of the Executive Committee of KONE Corporation in 1995. Mr Itävuori graduated from the Vaasa School of Economics, Finland in 1982.

Marwan Lahoud, Chief Marketing and Strategy Officer

Mr Lahoud was appointed in June 2007. Previously, he was CEO of MBDA. He worked for Aerospatiale on its merger with Matra and on the foundation of EADS. Within EADS, he served as Senior Vice President Mergers & Acquisitions. Mr Lahoud is an alumnus of *École Polytechnique* and graduated from the *École Nationale Supérieure de l'Aéronautique et de l'Espace*.

Sean O'Keefe, Head of EADS North America

Mr O'Keefe was appointed to the Executive Committee in 2010. Previously, he was a corporate officer of the General Electric Company. Before that, he was Chancellor of the Louisiana State University, administrator of NASA, Secretary of the US Navy and CFO of the US Defense Department. Between public service appointments, he held professorships at US universities. Mr O'Keefe holds advanced degrees from Syracuse University's Maxwell School and Loyola University.

Hans Peter Ring, Chief Financial Officer EADS

Mr Ring was appointed EADS CFO in 2002, Chief Operating Officer in 2005 and Airbus CFO in dual role in 2007. In 1996, he was made Senior Vice President of Controlling at DASA and, subsequently, EADS. From 1992, he was CFO and Board member of Dornier Luftfahrt. He holds a degree in Business Administration from the University of Erlangen-Nuremberg.

Domingo Urena-Raso, Head of Airbus Military

Mr Urena-Raso was appointed in February 2009. He was previously in charge of the Power8 and "Future EADS" programmes. Since 1989, he has held various positions, amongst others at CASA, EADS PZL, Defence & Security Division and Airbus. Mr Urena-Raso holds degrees from the Polytechnic University of Madrid, from ESSEC in Paris and has an MBA.

Stefan Zoller, Head of Defence & Security

Mr Zoller was appointed in 2005, having held top management positions within the Division since 2000. Previously, he held various management positions within DASA, DaimlerChrysler, Dornier and Senstar/Canada. Mr Zoller graduated from the University Tübingen and holds a PhD.

4.1.6 Enterprise Risk Management System

OVERVIEW

One of management's fundamental goals is to foster an effective Internal Control ("IC") and Risk Management ("RM") environment at EADS. In 2008, EADS began implementation of a new Group-wide Enterprise Risk Management ("ERM") system which seeks to address these two subjects in parallel, while further developing and building upon the achievements of the previous IC and RM system in place. The resulting ERM system seeks to provide management with an enhanced tool for effectively managing the uncertainty and associated risks and opportunities inherent in EADS' business. In addition, the ERM system seeks to satisfy compliance requirements for an effective IC and RM system. EADS' ERM system is based on the Internal Control and Enterprise Risk Management Frameworks of the Committee of Sponsoring Organisations of the Treadway Commission (COSO II).

The ERM system serves as the basis for all sub-ERM, sub-IC and sub-RM procedures present throughout EADS at the various organisational levels such as the Divisions, business units and headquarters departments. It encompasses a hierarchical bottom-up and top-down reporting procedure to help ensure greater transparency of the risks and opportunities faced by the Group. At the top, the Board of Directors and the Audit Committee discuss all major issues, significant changes and planned improvements in relation to the ERM system.

For a discussion of the main risks to which the Group is exposed and which the ERM system is designed to control, as described below, see "Risk Factors".

Developments in 2009 and Outlook

During 2009, EADS sought to foster the Group-wide ERM system integration. Regular "top management discussions" took place on the major risks and opportunities that could affect the Group in reaching its objectives. The discussions were based on the self-assessment results of divisions, business units and headquarters departments.

In addition, reviews of the ERM systems of selected departments were performed by corporate audit during 2009 to substantiate these departments' self-assessments. As a result of the ongoing monitoring activities of the ERM system's effectiveness—including by the Board and Audit Committee over the course of 2009—further modifications to the ERM system and integration efforts are expected throughout 2010. Among other things, the ERM effectiveness measurement criteria and means for testing will be further developed and common ERM procedures will be further embedded in big programmes like the A380 and A400M to increase the robustness and reliability of the ERM system.

Board declaration – Limitations

The Board of Directors believes to the best of its knowledge that the internal risk management and control system over financial reporting has worked properly in 2009 and provides reasonable assurance that the financial reporting does not contain any errors of material importance.

1

2

3

4

5

Back to Contents

No matter how well designed, all ERM systems have inherent limitations, such as vulnerability to circumvention or management overrides of the controls in place. Consequently, no assurance can be given that EADS' ERM system and procedures are or will be, despite all care and effort, entirely effective.

EADS ERM POLICY

The core policy, objectives and procedures that define EADS' ERM system are communicated throughout the Group in a manual referred to as the "EADS ERM Policy", which sets forth:

- the ERM policy and objectives;
- the ERM procedures adopted by EADS including a standardised ERM monitoring system:
 - to ensure a uniform understanding of a comprehensive enterprise-wide risk and opportunity management and IC system,
 - to comprehensively cover risk and opportunity management in programmes/projects, functions and processes, with both internal and external sources,
 - to satisfy compliance requirements for an effective IC and RM system.

The EADS ERM Policy constitutes the framework for all existing IC and RM guidance and practice throughout EADS. The EADS ERM Policy is applicable throughout EADS to all divisions, business units and headquarters' departments. Joint ventures may also operate separate ERM systems, though the fundamental principles of the EADS ERM Policy generally apply.

The "EADS ERM Policy" is supplemented by:

- codes of conduct (*e.g.* EADS Code of Ethics, Corporate Social Responsibility);
- handbooks (*e.g.* "EADS Corporate Management Principles and Responsibilities", the "Financial Control Handbook");
- manuals (*e.g.* Treasury Procedures, "Accounting Manual", "Reporting Manual"); and
- guidelines (*e.g.* "Funding Policy", "quality handbooks").

External standards influencing the EADS ERM System include the IC and ERM frameworks of COSO, as well as industry-specific standards as defined by the International Standards Organisation (ISO).

Responsibility for the ERM System

Responsibility for the ERM system is as follows:

- the Board of Directors assumes overall responsibility for the ERM system and defines the level of risk that EADS wishes to accept on a corporate level;
- the Divisions, business units and headquarters' departments assume responsibility for the operation and monitoring of the ERM system. They seek to ensure transparency and effectiveness of the ERM system and adherence to its objectives. They take responsibility for the implementation of appropriate response activities to reduce probability and impact of risk exposures, and conversely for the implementation of appropriate response activities to increase probability and impact of opportunity exposures. They are responsible for the communication of risks and opportunities which affect others within EADS;
- corporate objectives are defined and cascaded throughout the whole organisation along the chain of management. Each level within the business adopts business objectives that link into and support EADS' corporate objectives; and
- EADS uses its employees' knowledge of the business to identify and assess key risks that might prevent EADS from achieving its objectives and to identify and assess new opportunities. EADS strives to do this on a regular basis through normal business processes to ensure it focuses on identifying and managing risks that might undermine its performance.

Objectives of ERM

The ERM system is designed to provide reasonable assurance to the Board of Directors, the Chief Executive Officer and the Chief Financial Officer regarding the achievement of the following objectives:

- the delivery of products on time and in accordance with cost and quality objectives;
- the reliability of financial reporting and the achievement of financial targets;
- the adequate identification, assessment, response, control action and monitoring of risks and opportunities on a timely basis throughout the Group, consistent with EADS objectives;
- the compliance with applicable external laws and regulations and with internal policies and guidelines;
- the effectiveness and efficiency of operations; and
- the transparency and quality of risk and opportunity monitoring and reporting (*e.g.* internal management reporting, financial statements, etc.).

ERM SYSTEM DESIGN

To enhance its effectiveness and operational reliability as well as to satisfy compliance requirements, the ERM system comprises certain mandatory ERM procedures:

- Risk and Opportunity Management procedures, to enhance operational risk and opportunity management throughout EADS by using ERM methodology;
- Financial risk measurement procedures, for consistent risk and opportunity quantification;
- ERM reporting procedures, for the status reporting of the ERM system and the risk and opportunity situation;
- ERM compliance and monitoring procedures, to substantiate to the Chief Executive Officer and Chief Financial Officer assessment of the effectiveness of the EADS ERM system; and
- ERM support procedures, covering important topics like ERM training, knowledge transfer, change management and the role of corporate audit.

ERM at EADS seeks to cover all types of risk such as operational, functional (*e.g.* strategic, compliance, reputational risks) and process risks, both quantifiable and unquantifiable, potentially affecting EADS short-, middle- and long-term as well as opportunities.

Risk and Opportunity Management procedures

The recurring Risk and Opportunity Management procedures comprise several components:

- setting of objectives and definition of risk tolerances;
- identification and assessment of risks and opportunities;
- determination of risk and opportunity responses and control activities (*i.e.* policies, procedures and other activities);
- monitoring and reporting of risks and opportunities.

The detailed processes and associated procedures will vary according to the size and nature of the programme/project or function, but the principles apply in any case. Local tailoring may be performed according to the internal business constraints and/or customer specific requirements.

ERM compliance and monitoring procedures

EADS has established formal ERM self-assessment mechanisms, to be applied by each identified process/control owner on a regular basis, who must assess his operational and functional risks as well as the operating and design effectiveness of

the internal controls in place for his process. The progress is monitored by the respective division, business unit and headquarters department and reported to EADS headquarters. To verify the successful implementation of the remediation actions, the remedied controls are periodically re-assessed. The relevant risks are subject to a management discussion process at the Group level. Each year, corporate audit provides an independent review of the status of the ERM systems in selected divisions, business units and headquarters departments (headquarters functions).

Based on the ERM self-assessments, management of each division, business unit and headquarters department prepares every year a formal representation letter as to the adequacy and effectiveness of the ERM systems within their scope of responsibility (including any identified significant deficiencies and material weaknesses), which is provided to the Chief Executive Officer and Chief Financial Officer.

In addition to regular monitoring activities and *ad hoc* reporting at the Divisional, business unit and headquarters levels, assessments about the adequacy and effectiveness of the ERM system are systematically discussed between the Chief Executive Officer and Chief Financial Officer and the respective division, business unit or headquarters department heads. These “top management discussions” serve to prioritise potential issues at the EADS level, define and implement appropriate actions, if needed, and derive conclusions for the overall EADS ERM report.

Joint ventures, such as MBDA, operate separate IC and RM systems. Alignment with the EADS ERM system is facilitated, *inter alia*, through EADS’ presence on such affiliates’ supervisory and management bodies (*e.g.* Board of Directors, Audit Committee).

The yearly ERM sign-off process requires the Chief Executive Officer and Chief Financial Officer to provide an assessment to the Board of Directors, to the best of their knowledge, that they are reasonably assured about the effectiveness of the ERM system including a confirmation of whether:

- the IC system is adequate to provide reasonable assurance regarding the reliability of financial reporting as well as compliance with applicable laws and regulations;
- the control objectives are being achieved by controls that are documented, adequately designed for their business and are operating effectively, in all material respects;
- the owner of each control activity is clearly identified; and
- the RM system is designed and operated to identify, assess, respond to, design controls and monitor/report on risks on a timely basis.

[Back to Contents](#)

The Chief Executive Officer's and Chief Financial Officer's ERM statement is mainly substantiated by the self-assessments and confirmation letters, ERM reviews (including internal audits) and the "top management discussions", as described above.

BUSINESS PROCESSES COVERED BY THE ERM SYSTEM

Based on EADS' activities, 18 high-level business processes have been identified within EADS. They are categorised into core processes (research and development, production, sales, after-sales and programme management), support processes (corporate sourcing, Human Resources, accounting, fixed assets, treasury, information technology, mergers and acquisitions, legal and insurance) and management processes (strategy, corporate audit, controlling and management controls). These business processes, together with the corresponding ERM procedures, are designed to control process risks that have a significant potential of affecting the Group's financial condition and results of operations. Below is a description of the main business processes at the respective headquarters' level which were in place during 2009.

Accounting

At the core of EADS' ERM system are accounting processes and controls designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements and other financial information used by management and disclosed to EADS' investors and other stakeholders. The integrated approach to planning and reporting aims to improve internal communication and transparency across departments and organisational units within EADS.

The EADS financial control model defines the planning and reporting procedures that apply to all operational units of the Group, as well as the responsibilities of the Chief Financial Officer, who is charged with developing, implementing and monitoring these procedures. Among the Chief Financial Officer's primary tasks is oversight of the preparation of the consolidated financial statements of EADS, which are prepared under the direct supervision of the Chief Accounting Officer ("CAO"). The CAO is responsible for the operation of the Group's consolidation systems and rules and for the definition of Group-wide accounting policies which comply with IFRS, reporting rules and financial guidelines that ensure the consistency and quality of financial information reported by the Divisions and business units. EADS' accounting policies are set out in a written accounting manual, which is agreed with the Company's external Auditors. Changes to the EADS accounting manual require approval by the CAO, and, where significant changes are involved, the Chief Financial Officer or the Board of Directors (based upon the advice of the Audit Committee).

Control of the financial planning and reporting processes is achieved not only through the development of Group-wide accounting systems and policies, but also through an organised process for providing information from the reporting units on a

timely basis as an up-to-date decision-making tool to control the operational performance of the Group. This information includes regular cash and treasury reports, as well as other financial information used for future strategic and operative planning and control and supervision of economic risks arising from the Group's operations.

During the course of each reporting cycle, the business unit chief financial officers are in regular contact with the Division chief financial officers, and frequently meet with the CAO and his responsible staff to discuss the financial information generated by the Divisions and business units.

Prior to being disclosed to the public and subsequently submitted for approval to the shareholders, the consolidated year-end financial statements are audited by EADS' external Auditors, reviewed by the Audit Committee and submitted for approval by the Board of Directors. A similar procedure is used for the semi-annual and quarterly closing. Group Auditors are involved before EADS financial statements are submitted to the Board of Directors.

Treasury

Treasury management procedures, defined by EADS' central treasury department at Group headquarters, enhance management's ability to identify and assess risks relating to liquidity, foreign exchange rates and interest rates. Controlled subsidiaries fall within the scope of the centralised treasury management procedures, with similar monitoring procedures existing for jointly controlled affiliates, such as MBDA.

Cash Management

Management of liquidity to support operations is one of the primary missions of the EADS central treasury department. Regular cash planning, in conjunction with the planning/reporting department, as well as monthly cash reporting by the central treasury department, provide management with the information required to oversee the Group's cash profile and to initiate necessary corrective action in order to ensure overall liquidity. To maintain targeted liquidity levels and to safeguard cash, EADS has implemented a cash pooling system with daily cash sweeps from the controlled subsidiaries to centrally managed accounts. Payment fraud prevention procedures have been defined and communicated throughout the Group.

Hedge Management

Commercial operations generate material foreign exchange and interest rate exposures. A Group hedging policy is defined and updated regularly by the Board of Directors. In order to ensure that all hedging activity is undertaken in line with the Group hedging policy, the central treasury department executes all hedging transactions. The central treasury department conducts ongoing risk analysis and proposes appropriate measures to the Divisions and business units with respect to foreign exchange

and interest rate risk. Subsidiaries are required to calculate, update and monitor their foreign exchange and interest rate exposure with the EADS central treasury department on a monthly basis, in accordance with defined treasury procedures. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations — 2.1.8 Hedging Activities”.

Sales Financing

In connection with certain commercial contracts, EADS may agree to enter into sales financing arrangements. In respect of sales financing at Airbus, an annual sales financing budget is defined as part of the EADS operative planning process. Sales financing transactions are approved on a case-by-case basis with the involvement of top management, in line with certain risk assessment guidelines and managed by a Group-wide integrated organisation.

Sales

Commercial contracts entered into by EADS’ operating subsidiaries have the potential to expose the Group to significant financial, operational and legal risks. To control these risks, Management has implemented contract proposal review procedures that seek to ensure that EADS does not enter into material commercial contracts that expose it to unacceptable risk or are not in line with the Group’s overall objectives. These procedures include (i) Board of Directors-approved thresholds and criteria for determining the risk and profitability profiles and (ii) a mandated pre-approval process for contracts defined as “high-risk”. Contracts falling within the defined threshold categories require approval by the respective divisional chief financial officer. Contracts that are deemed “high-risk” and/or exceed certain thresholds must be submitted to a standing Commercial Committee (with the Chief Financial Officer and the Chief Strategy and Marketing Officer serving as chairmen, and a possible escalation to the Chief Executive Officer when needed). This committee is responsible for reviewing the proposal and giving recommendations when necessary, based on which the concerned business unit is allowed to remit its offer. In the case of Airbus, contracts are approved in accordance with Airbus’ own corporate governance policy, based on EADS guidelines which follow the same principle. In general, where EADS shares control of a subsidiary with a third party, the Commercial Committee is responsible for developing the EADS position on proposed commercial contracts.

Legal

EADS is subject to myriad legal requirements in each jurisdiction in which it conducts business. The mission of the EADS Legal department, in coordination with the Division and business unit legal departments, is to actively promote and defend the interests of the Group on all legal issues and to ensure its legal security at all times. By carrying out this mission it is responsible for implementing and overseeing the procedures designed to ensure

that EADS’ activities comply with all applicable laws, regulations and requirements. It is also responsible for overseeing all major litigation affecting the Group, including intellectual property.

The EADS Legal department, together with the Corporate Secretary, also plays an essential role in the design and administration of (i) the EADS corporate governance procedures and (ii) the legal documentation underlying the delegation of powers and responsibilities which define the EADS management and its IC environment.

Corporate Audit

The EADS Corporate Audit department, under the direction of the Corporate Secretary, provides Management with a risk-based evaluation of the effectiveness of the Group’s ERM procedures. Based upon a risk-oriented approved annual audit plan, the Corporate Audit department (i) reviews operational processes for risk management and operating efficiency improvement opportunities and (ii) reviews compliance with legal requirements and internal policies, process guidelines and procedures. Corporate Audit also involves ad hoc reviews, performed at the request of management, focusing on current (*e.g.*, suspected fraudulent activities) and future (*e.g.*, contract management and programme management) risks.

Corporate Sourcing

The performance of EADS is to a large extent determined through its supply chain. Therefore, sourcing is a key lever for EADS in its marketplace.

EADS’ size and complexity requires a common approach to maximise market levers and to avoid inefficiencies in the procurement process. To help ensure that sourcing is carried out in the most effective, efficient and ethical manner, a set of common procurement processes, which support a common sourcing strategy and ultimately the Group strategy and vision, is defined by the head of Corporate Sourcing and the Chief Procurement Officers Council.

The common approach and processes are then implemented across all divisions through the sourcing networks. These sourcing networks comprise representatives from all EADS divisions. They are tasked by the EADS Chief Procurement Officers Council to define and roll out across EADS strategic sourcing topics such as Supplier Relationship Management, Common Processes and Tools, Global Sourcing, Joint Procurement, Corporate Social Responsibility, and Procurement Performance Management. The procurement processes are regularly reviewed by means of audits and self-assessments and thus consistently challenged and optimised.

Compliance

See “— 4.1.7 Compliance Organisation” below.

4.1.7 Compliance Organisation

In 2008, the Board of Directors decided to create a Group-wide Compliance Organisation and to appoint an EADS Group CCO.

The EADS Group CCO is in charge of the design and implementation of the EADS Ethics and Compliance Programme, which supports the Group's commitment to adhering to the highest ethical and compliance standards in order to sustain the Group's global competitiveness. The EADS Ethics and Compliance Programme seeks to ensure that Group business practices conform to applicable laws and regulations as well as to ethical business principles endorsed by the Group. It also seeks to promote a culture of integrity internally.

The Compliance Organisation consists of compliance resources appointed across the Group, in a set-up that balances proximity to day-to-day business activities with the necessary independence. To achieve this dual objective, compliance officers throughout the Group report to both compliance and to executive management. This is reflected at the very top of the organisation, with the EADS Group CCO reporting to both the Chief Executive Officer and the Audit Committee.

The compliance officers appointed at each of the four divisions are charged with helping divisional management to perform business activities in accordance with the EADS Ethics and Compliance Programme. Divisional compliance officers must ensure that they have sufficient resources within the Divisions to carry out their roles effectively. They report to both the EADS Group CCO and to the Divisional heads.

At Group level, permanent compliance officers are appointed to departments where the main compliance risks exist, duly empowered to issue compliance directives applicable throughout the Group. For example, the Group International Compliance Officer is in charge of developing and implementing EADS' Business Ethics Policy and Rules to prevent corruption. The Group Export Compliance Officer seeks to ensure that the

marketing activities of the Group comply with all relevant export control rules, and with the internal "sensitive countries" policy. In 2009, a new compliance officer was appointed to supervise compliance in the supply chain.

In order to achieve the objectives set by the Chief Executive Officer and discussed with the Audit Committee, the EADS Group CCO has established a compliance roadmap based on international standards. As part of its ongoing objectives, the Compliance Organisation has also developed a new assessment of the main compliance risks which was integrated into the EADS ERM system and reviewed by the Audit Committee and the Board of Directors in 2009.

The compliance roadmap provides an overview of compliance activities such as:

- the monitoring of ethics and compliance policies, starting with the update of the EADS Code of Ethics;
- communication and training activities across the Group; and
- implementation of an alert system for employees to be able to raise ethical and compliance concerns in strict confidentiality, targeted for the end of 2010.

EADS is leading efforts to establish consistent global standards for compliance in the aerospace and defence industry, in particular business ethics, which helped lead to the adoption in 2009 of "Global Principles of Business Ethics" by European and US industry associations. As business ethics standards become more consistent globally with a more level playing field for all, EADS will seek to turn its commitment to ethics and integrity into a sustainable competitive advantage.

In 2009, compliance programme progress reports were presented twice to the Board of Directors and Audit Committee.

4.2 Interests of Directors and Principal Executive Officers

4.2.1 Compensation Granted to Directors and Principal Executive Officers

4.2.1.1 GENERAL PRINCIPLES

Shareholders expect a strong commitment from members of the Board of Directors; the compensation policy is therefore designed to focus efforts on what the Group wants to value and reward. To meet these objectives, a significant portion of the compensation is variable and linked to key performance measures and individual objectives. The remuneration is benchmarked

regularly against the practice of other global companies based in Europe and the USA to ensure fairness and competitiveness.

The compensation of the executive member of the Board (the Chief Executive Officer) and of the members of the Executive Committee combines short-term and long-term reward and is summarised as follows:

	Compensation element	Main drivers	Performance measures	Variation of payment as% of total target income/ % of vesting
Short-term	Base salary	Position/job value	Individual performance/ Market practice	EADS CEO and Airbus CEO: 45% of total target income Other members of the Executive Committee: 50% of total target income
	Variable pay	Achievement of Group business and financial yearly objectives and reward of individual performance	Collective part (50% of target variable pay): EBIT* (50%), cash (25%) and capital employed (25%) achievement Individual bonus (50% of target variable pay): achievement of annual individual objectives	EADS CEO and Airbus CEO: 55% of total target income (range from 0% to 175%) Other members of the Executive Committee: 50% of total target income (range from 0% to 175%)
Mid- and Long-term	Performance unit plan	Achievement of long-term operational profit, measured through cumulative EBIT* achievement	The number of performance units which will vest is based on 2nd and 3rd year cumulative EBIT* achievement	Vested performance units will range from 50% to 150% of initial grant ⁽¹⁾

(1) In case of negative cumulative EBIT* during the performance period, the Board of Directors can decide to review the vesting of the performance units including the 50% portion which is not subject to performance conditions (additional vesting condition).

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

4.2.1.2 COMPENSATION OF THE MEMBERS OF THE BOARD OF DIRECTORS

Each non-executive member of the Board will receive an annual fixed fee of €80,000 and a fee for participation in Board meetings of €5,000 per meeting attended.

The Chairman of the Board will receive an annual fixed fee of €180,000 for carrying out this role and a fee for participation in Board meetings of €10,000 per meeting attended.

The Chairmen of each of the Board Committees will receive an additional annual fixed fee of €30,000. The members of each of the Board Committees will receive an additional annual fixed fee of €20,000 for each Committee membership.

Since 1 January 2008, non-executive members of the Board are no longer entitled to variable pay.

Committee Chairmanship and Committee membership annual fees are cumulative if the concerned non-executive members of the Board belong to two different Committees.

The Chief Executive Officer receives neither fees for participation in Board of Directors' meetings nor any dedicated compensation as member of the Board of Directors in addition to his compensation as member of the Executive Committee (see below "— 4.2.1.3 Compensation of the Members of the Executive Committee"). The Chief Executive Officer is eligible for benefits under Long-Term Incentive Plans including the performance unit plan (see "— 4.3.3 Long-Term Incentive Plans")

and under employee share ownership plans in his capacity as qualifying employee (see also “— 4.3.2 Employee Share Ownership Plans”). Additionally, the Chief Executive Officer is entitled to pension benefits.

The amounts of the various components constituting the compensation granted to the Chief Executive Officer and

They are summarised below as well:

Total remuneration and related compensation costs

The total remuneration and related compensation costs of the members of the Board of Directors and former directors related to 2009 and 2008 (*pro rata* in accordance with their periods of membership) can be summarised as follows:

Non Executive members of the Board of Directors	2009	2008
	in €	in €
Fixum****	1,075,000	1,090,000
Bonus (related to reporting period)	Not applicable	Not applicable
Fees	455,000	360,000

Executive members of the Board of Directors	2009	2008
	in €	in €
Fixum	900,000	900,000
Bonus (related to reporting period including part paid by EADS NV)	1,141,250	Waived at CEO's request

The cash remuneration of the Non Executive members of the Board of Directors was as follows:

2009	Fixum in €	Bonus in € related to 2009	Fees*** in €	Total in €
Directors				
Bodo Uebber	183,750	N/A	90,000	273,750
Rolf Bartke	100,000	N/A	55,000	155,000
Dominique D'Hinnin	120,000	N/A	50,000	170,000
Juan Manuel Eguigaray Ucelay	80,000	N/A	55,000	135,000
Arnaud Lagardère	100,000	N/A	10,000	110,000
Hermann-Josef Lamberti	130,000	N/A	35,000	165,000
Lakshmi N. Mittal*	-	-	-	-
Sir John Parker	130,000	N/A	45,000	175,000
Michel Pébereau	100,000	N/A	50,000	150,000
Wilfried Porth**	70,000	N/A	25,000	95,000
Former directors**				
Rüdiger Grube	61,250	N/A	40,000	101,250
Total	1,075,000		455,000	1,530,000

* Remuneration waived at the Director's request.

** *Pro rata* in accordance with their periods of membership with the Board of Directors.

*** Fees for 2nd half year 2009 included, but paid in January 2010.

****The Fixum related to 2008 was paid in 2009; the Fixum related to 2009 will be paid in 2010.

The cash remuneration of the Executive member of the Board of Directors was as follows:

2009	Fixum in €	Bonus in € related to 2009
Directors		
Louis Gallois	900,000	1,141,250

In previous years, the part of the Executive Board members' compensation which is paid by EADS NV was disclosed within the fixum. The EADS NV compensation is now disclosed as a component of the variable compensation related to the reporting period.

Long-term incentives

The table below gives an overview of the Long-term Incentive Plans (performance units) granted by EADS in 2009 to the Chief Executive Officer:

	Unit plan: number of performance units*	
	Granted in 2009	Vesting dates
Louis Gallois	46,000	Vesting schedule is made up of 4 payments over 2 years: (a) 25% expected in May 2013; (b) 25% expected in November 2013; (c) 25% expected in May 2014; (d) 25% expected in November 2014.

* Vesting of all performance units granted to the Chief Executive Officer is subject to performance conditions.

Pension benefits

The members of the Executive Committee have pension promises as part of their employment agreements. The general policy is to give them annual pensions of 50% of their annual base salary upon reaching 5 years of service in the Executive Committee of EADS at the age of 60 or 65.

These rights can gradually increase to 60% after a second term, usually after ten years of service in the EADS Executive Committee.

These pension schemes have been implemented through collective executive pension plans in France and Germany. These pension promises have also separate rules e.g. for minimum length of service and other conditions to comply with national regulations.

For the Chief Executive Officer, the amount of the pension defined benefit obligation amounted to € 1.8 million as of 31 December 2009, while the amount of current service and interest cost related to his pension promise accounted for during fiscal year 2009 represented an expense of €0.7 million. This obligation has been accrued for in the Consolidated Financial Statements.

Termination indemnity

As part of his mandate contract, the Chief Executive Officer is entitled to a termination indemnity when the parting results from a decision by the Company in case of change in control or

change in the Company's strategy. Payment of the termination indemnity is also subject to performance conditions as fixed and assessed by the Board of Directors. The termination indemnity, if applicable, would amount to a maximum of 18 months of annual total target salary.

However this termination indemnity is not applicable, since the Chief Executive Officer has reached the age of 65.

Apart from the Chief Executive Officer, no other Director who is in office is entitled to a termination indemnity.

Non-competition clause

A non-competition clause is included in the contract of the Chief Executive Officer. This clause is applicable for a one-year period, starting at the end of the mandate contract, and is renewable for one year at the Company's initiative.

The Chief Executive Officer will receive compensation based on 50% of the last target annual monthly salary in return of the application of the non-competition clause. The monthly salary is defined as base salary and 1/12 of the annual performance bonus recently paid.

Other benefits

The Chief Executive Officer is entitled to a company car. The value of his company car as at 31 December 2009 is €24,120.

1

2

3

4

5

Back to Contents

4.2.1.3 COMPENSATION OF THE MEMBERS OF THE EXECUTIVE COMMITTEE

The members of the Executive Committee, including the Chief Executive Officer, are entitled to receive for the year 2009 an accumulated total target compensation on a full year basis of €14,137,200. This compensation is divided for the EADS Chief Executive Officer and Airbus Chief Executive Officer into a 45% fixed part and a 55% variable part on target and for the other members of the Executive Committee into a 50% fixed part and a 50% variable part on target.

The members of the Executive Committee including the Chief Executive Officer receive the majority of their compensation from their relevant national Group entity (under the terms of their employment or mandate contract) and the remaining part from EADS N.V. (“NV compensation”, under the terms of the N.V. letter of agreement).

The variable part is calculated on the basis of two equal components:

- collective part (50% of the variable part) to reward business performance at Group level or division level (if applicable). Cash, EBIT* and Capital Employed are the financial indicators chosen to measure collective performance (EBIT* represents 50%, Cash represents 25% and Capital Employed represents 25% of the collective part in 2009);
- individual bonus (50% of the variable part) to reward individual performance measured against the achievement of individual objectives, which are also set on the basis of non-financial indicators that are relevant to the Company’s long-term value creation.

The Group is committed to setting individual and financial targets, the achievement of which would reflect the real performance of EADS. Since 2009, the collective part (50% of the variable pay) is based on EBIT* (50%), Cash (25%) and Capital Employed (25%). The new choice of EBIT*, Cash and Capital Employed as financial indicators ensures the alignment of the Chief Executive Officer with EADS priorities and long-term objectives.

Based on the level of performance, the collective as well as the individual payout can vary from 0% to 175% of the target payment.

On target payment at 100% for both individual and financial targets would indicate strong personal and company performance.

The Remuneration and Nomination Committee reviews and makes recommendations to the Board of Directors on bonus payments to the Chief Executive Officer and to the members of the Executive Committee; the Board of Directors makes the final decision.

The total compensation paid by EADS and all its Group companies to Mr Louis Gallois, Chief Executive Officer, during the year 2009, was €900,000 (this sum includes only the payments of his January to December 2009 fixum and no variable pay for 2008, as he waived such variable pay in 2008).

4.2.2 Long-Term Incentives Granted to the Chief Executive Officer

See “— 4.3.3 Long-Term Incentive Plans”.

* EBIT: earnings before interest and taxes, pre-goodwill impairment and exceptionals.

4.2.3 Related Party Transactions

Article 2:146 of the Dutch Civil Code provides as follows:

“Unless the Articles of association provide otherwise, a company (*naamloze vennootschap*) shall be represented by its board of supervisory directors in all matters in which it has a conflict of interest with one or more of the members of its Board of Directors. The shareholders’ meeting shall at all times have powers to designate one or more persons for this purpose”. In the case of EADS, the Articles of Association do provide otherwise since they enable the Board of Directors to have power to represent the Company in matters where the Company has a conflict of interest with one or more members of the Board of Directors.

During the years 2007, 2008 and 2009, no agreement was entered into by the Company with one of its Directors or principal officers or a shareholder holding more than 5% of the voting rights of the Company outside the ordinary course of

business and in conditions other than arm’s length conditions. See “Notes to the Consolidated Financial Statements (IFRS) — Note 37: Related party transactions” for the year ended 31 December 2009 and “Notes to the Consolidated Financial Statements (IFRS) — Note 37: Related party transactions” for the year ended 31 December 2008, as incorporated by reference herein.

For a description of the relationships between the Company and its principal shareholders, see “General Description of the Company and its Shareholders — 3.3.2 Relationships with Principal Shareholders”. Other than the relationships between the Company and its principal shareholders described therein, there are no potential conflicts of interest between the duties to the Company of the Directors and their respective private interests or other duties.

4.2.4 Loans and Guarantees Granted to Directors

EADS has not granted any loans to its Directors or members of the Executive Committee.

4.3 Employee Profit Sharing and Incentive Plans

4.3.1 Employee Profit Sharing and Incentive Agreements

EADS’ remuneration policy is strongly linked to the achievement of individual and Company objectives, both for each division and for the overall Group. In 2009, a performance and restricted unit plan was established for the senior management of the Group (see “— 4.3.3 Long-Term Incentive Plans”), and employees were offered shares at favourable conditions within the context of a new employee share ownership plan (see “— 4.3.2 Employee Share Ownership Plans”).

Since 2005, the success sharing schemes which are implemented at EADS in France, Germany, Spain and the UK follow one set of common rules of the Group, ensuring a consistent application in these four countries.

4.3.2 Employee Share Ownership Plans

EADS supports employee share ownership. Since its creation, EADS has regularly offered qualifying employees the opportunity to purchase EADS shares on favourable terms through employee share ownership plans (“ESOPs”).

The following table summarises the main terms of the ESOPs conducted from 2000-2008:

Year	Price per share	Nominal value per share	Number of shares issued	Date of issuance
2000	€15.30	€1	11,769,259	21 September 2000
2001	€10.70	€1	2,017,894	5 December 2001
2002	€8.86*/€7.93**	€1	2,022,939	4 December 2002
2003	€12.48	€1	1,686,682	5 December 2003
2004	€18	€1	2,017,822	3 December 2004
2005	€18.86	€1	1,938,309	29 July 2005
2007	€19.62*/€17.16**	€1	2,037,835	9 May 2007
2008	€12.79*/€11.70**	€1	2,031,820	25 July 2008

* Shares purchased within context of Group employee savings plan

** Shares purchased directly

ESOP 2009

In November 2009, EADS again offered to qualifying employees a maximum of 0.25% of its total issued share capital before the offering. This employee offering was for up to 2,035,000 shares of a nominal value of €1 each.

The employee offering was open only to employees who:

- had at least three months' seniority;
- were employed by (i) EADS or (ii) one of its subsidiaries or (iii) companies in which EADS holds at least 10% of the share capital and over whose management it has a determining influence and whose registered offices are located in Germany, Australia, Belgium, Canada, Spain, the United States, Finland, France, the United Kingdom, Mexico, the Netherlands and Singapore.

The employee offering was divided into two tranches:

- shares subscribed for by qualifying employees in Group employee savings plan were offered for a price of €10.76 per share;

- shares subscribed for by qualifying employees directly were offered for a price of €10.76 per share.

The employees are generally restricted from selling the shares offered in this employee offering for one year and sometimes more in certain countries.

A total number of 1,358,936 shares were subscribed for in the employee offering. Shares were delivered on 18 December 2009.

FUTURE ESOPs

EADS intends to implement an ESOP in 2010, subject to approval by the Board of Directors. The 2010 ESOP is expected to have the following main characteristics: offering of up to approximately 2 million shares of the Company, *i.e.*, up to 0.25% of its issued share capital, with discount to the market price (- 20%), to all qualifying employees. In addition, EADS is evaluating alternative models for an ESOP, which might have an impact on the current plan design.

4.3.3 Long-Term Incentive Plans

At its 26 May 2000, 20 October 2000, 12 July 2001, 9 August 2002, 10 October 2003, 8 October 2004, 9 December 2005 and 18 December 2006 meetings, the Board of Directors of the Company, using the authorisation given to it by the shareholders' meetings of 24 May 2000, 10 May 2001, 6 May 2003, 11 May 2005, and 4 May 2006 approved the granting of stock options for subscription of shares in the Company.

At its 18 December 2006 meeting, the Board of Directors of the Company, using the authorisation given to it by the shareholders' meeting of 4 May 2006 approved the granting of performance shares and restricted shares in the Company.

At its 7 December 2007, 13 November 2008 and 13 November 2009 meetings, the Board of Directors of the Company approved the granting of performance units and restricted units in the Company.

The principal characteristics of these options, performance and restricted shares and performance and restricted units as at 31 December 2009 are set out in the "Notes to the Consolidated Financial Statements (IFRS) — Note 36: Share-based payment". They are also set out in the table below:
